Dear Sir,

I worked at Cannon AFB for 24 years, from March 1964 to August 1988. We were always able to get funding for the construction projects we needed because of the quality of training our pilots students were able to receive. The weather was great for training both winter & summer. While the winds could be a problem if the wind direction was not down the runway. the primary R/W was used in excess of 90% of the ~~time~~ because the direction of the runway was ~~for~~ correct for the prevailing winds.

Both of the runways are in good

condition and will not need any major repairs for the next several years.

Please come and look to see why Cannon is so great and should be left open.

Thank you

Nelson Pitt
