Note: 1. Based on peacetime planning factors.
 2. PAA, Total ACFT inventory and distribution is a moving target based upon PTR decisions and other factors at various echelon levels.

* Reflects updated data (as to info provided in data call #19 mission ROMNTS, Para E., Ques #1) based upon current PTR projection for CTW-5 in FY2001.

** Current planned total JPATS buy for CNATRA - Initial delivery scheduled for NAS Whiting Field in FY2002. PAA for CNATRA = 304

NOLF Site 8

Maximum of 12 aircraft at NOLF

Left: 6 aircraft in pattern

Right: 6 aircraft in pattern

- (When tactical work is conducted, only 3 aircraft allowed in that pattern)

- (Formation flights count as one aircraft for side but as individual aircraft in determining number at site)

- (Aircraft in refueling area or crew change area, do not count towards maximum aircraft working at NOLF)

NOLF Harold

Currently utilize NOLF at a maximum of 07 aircraft. FAA approval allows 14 aircraft at NOLF.

Normal Pattern: 5 aircraft

Confined Landings: 2 aircraft

- (Formation flights count as one aircraft for autorotation side but as individual aircraft for number at site)

Other

It is estimated that the following Fixed Wing NOLF's could accommodate ten (10) rotary wing aircraft if a requirement existed.

NOLF Holley

NOLF Saufley

NOLF Barin

NOLF Silverdale

NOLF Summerdale

NOLF Wolf

NOLF Evergreen

NOLF Choctaw (if assigned to TW-5)

It is estimated that NOLF Brewton could accommodate eight (8) rotary wing aircraft due to the civil operations.

Command: CNATRA

Answers to BSAT Joint training questions of 3 August 1994

1: Three VR routes (VR 1082, VR 1084, VR 1085) are located within 30 NM of NAS Whiting Field. All three routes are operated between 100 feet AGL and 1500 feet AGL depending on location of checkpoint.
CHANGE WILL BE SUBMITTED TO ADD THESE TO DATA CALLS.

Note: DC20 will be revised to include these routes. Change to follow. S/H (Neta) CWJ/N 1434 8/17/94

Five (local use only) Helicopter Tactics (HTAC) routes (Purple, Black, Red, Green and Orange) are located within 30 NM of NAS Whiting Field. Training on these routes is conducted at 200 feet AGL except for Orange route which is 500 feet AGL.

Four SR Routes (SR 101, SR 103, SR 104, and SR 106) are located within 30 NM of NAS Whiting Field. These routes are currently limited to C-130 operations and operate between 250 feet AGL and 3000 feet AGL depending on location of checkpoint.

NOLF Spencer

Maximum of 15 aircraft operating at NOLF
Left: 6 aircraft in pattern, 2 aircraft in low work
Right: 5 aircraft in pattern, 2 aircraft in low work
- (Aircraft in refueling area or crew change area, do not count towards maximum aircraft working at NOLF)

NOLF Pace

Left: 4 aircraft in pattern
Right: 4 aircraft in pattern

NOLF Site 8

Maximum of 12 aircraft at NOLF
Left: 6 aircraft in pattern
Right: 6 aircraft in pattern
- (When tactical work is conducted, only 3 aircraft allowed in that pattern)
- (Formation flights count as one aircraft for side but as individual aircraft in determining number at site)
- (Aircraft in refueling area or crew change area, do not count towards maximum aircraft working at NOLF)

*148 or OLF's
188 including main fields*

NOLF Santa Rosa

Maximum of 11 aircraft at NOLF
Normal Pattern: 7 aircraft
Autorotations: 4 aircraft
- (Formation flights count as one aircraft for autorotation side but as individual aircraft in determining number at site)

NOLF Harold

Currently utilize NOLF at a maximum of 07 aircraft. FAA approval allows 14 aircraft at NOLF
Normal Pattern: 5 aircraft
Confined landings: 2 aircraft
- (Formation flights count as one aircraft for autorotation side but as individual aircraft for number at site)

Enclosure (1)

It is estimated that the following Fixed wing NOLF's could accommodate ten (10) rotary wing aircraft if a requirement existed.

NOLF Holley	NOLF Saufley	NOLF Barin
NOLF Silverhill	NOLF Summerdale	NOLF Wolf
NOLF Evergreen	NOLF Choctaw (if assigned to TW-5)	

It is estimated that NOLF Brewton could only accommodate eight (8) rotary wing aircraft due to the civil operations.

Q3: South Whiting

South Whiting is utilized as the base field for maintenance, arrival and departure point for all NOLF work, IFR and VFR airwork, and IFR and VFR cross country work. It is a day/night visual/instrument airfield with an operating control tower and radar facility. The number of aircraft that could operate at one time on the facility would vary with type operations conducted and the ability of ATC to accommodate the various evolutions. It is estimated that the airfield could accommodate 20 rotary wing aircraft simultaneously

North Whiting

North Whiting could accommodate a limited number of rotary wing aircraft along with the fixed wing aircraft but its primary function is to handle fixed wing training. Again the number of rotary wing aircraft that could operate at one time on the facility would vary with type operations conducted and the ability of ATC to accommodate the various evolutions. It is estimated that the airfield could accommodate 20 rotary wing aircraft simultaneously

Q 4: Can you load munitions on training aircraft at your installation?

Yes.

Flight Training

1. For each syllabus of undergraduate pilot and/or NFO/Navigator flight training and aircraft type required for that training, give the number of required sorties per graduate, flight time in the airspace/sortie, the dimensions, and the total number of flight hours required for each type of airspace listed that is used for training in that particular syllabus [Total flight hours = # Sorties x (Flight time per sortie)]. Also include additional types of airspace that could accommodate this training.

Note: For helicopter training, airspace dimensions are given as available airspace.

The original answer for question number 9 on page 29 of Joint Data Call 19, did not consider operational capacity for JPATS contenders.

The operations per hour capacity (99) considered T-34C's current and historical operating procedures (split field operations) at NAS Whiting Field (North). The capacity of 99 operations per hour was derived by considering VFR, IFR, and below minimum periods while considering zero touch and go operations. This equates to 130 operations per hour in VFR periods, 63 operations per hour in IFR and zero when below minimums. This data is similarly applicable for the vast majority of JPATS contenders.

Take off ground roll (TGR) and landing ground roll (LGR) data on the two aircraft exceptions would prevent split field operations. Therefore, the hourly capacity for these two exceptions would be reduced to 72 operations per hour considering VFR, IFR, and below minimum periods while considering zero touch and go operations. This equates to 89 operations per hour in VFR periods, 60 operations per hour in IFR and zero when below minimums.

Historically, the runways at NAS Whiting Field (South), have, in essence, served as parallel runways to augment peak and/or surges in operations at North Field. With minimal operational and facility modifications, this enhanced capacity could continue with all JPATS contenders.

⁶Power for each independent runway complex at the home field and all OLFs and by aircraft type.

The original answer for question number 11 on page 31 of Joint Data Call 19, did not consider the sortie capacity for JPATS contenders.

The sortie capacity considered T-34C's current and historical operating procedures (split field operations) at NAS Whiting Field (North). This data is similarly applicable for the vast majority of JPATS contenders.

Take off ground roll (TGR) and landing ground roll (LGR) data on the two aircraft exceptions would prevent split field operations. Therefore, the sortie capacity for these two exceptions would be reduced. Based on 72 operations per hour (Question 9) multiplied by 17.15 hours (Question 4), multiplied by 237 days per year (Question 4) = maximum operations per year of 292,648. Each sortie is two operations therefore the maximum sortie rate is 146,324 per year.

Historically, the runways at NAS Whiting Field (South), have, in essence, served as parallel runways to augment peak and/or surges in operations at North Field. With minimal operational and facility modifications, this enhanced capacity could continue with all JPATS contenders.

9. Given the current mix of aircraft assigned to your air station, what is the average number of operations per hour this airfield and each OLF can support for each runway complex over a one year period (use the number of training days/year used by your service). This number should take in account reductions in operations due to weather and the times the airfield is closed to undergraduate/graduate pilot and/or NFO/Navigator training (i.e., calculations should be based on the methodology in the FAA's Airport Capacity and Delay manual). Show how this number was derived.

112 OPERATIONS PER HOUR. USING FIGURE A5-6 OF FAA MANUAL, CAPACITY IS 140. AFTER DEDUCTING 13% FOR WEATHER AND 7% FOR OTHER ACTIVES, AIRFIELD HOURLY CAPACITY IS 112 PER HOUR.

10. Complete the table below to describe the runway activity to each runway at the home field and all OLFs. Use the FAA Airport Operations Count (traffic count) to determine departures and arrivals:

12. Discuss the factors that constrain the number of available student flying hours per day (e.g., AICUZ agreements).

(g) In the event that it became necessary to increase base loading at your installation, does the airspace overlying and adjacent to your installation have the capacity to assume an additional workload? Estimate the percentage of the possible increase. Provide the basis/ calculations for these estimates.

BASED ON THE NAS WHITING FIELD'S BRAC BRIEFING MATERIALS SUBMISSION OF JANUARY 1993 AND THE NAVAL AVIATION TRAINING SYSTEM (NATS) PLAN COMPILED BY THE SOUTHERN DIVISION, NAVAL FACILITIES ENGINEERING COMMAND IN MAY 1987, NAS WHITING FIELD HAS A T-34C PTR CAPACITY OF 1500. THE NATS CONSIDERED CAPACITY LEVELS FOR HOMEFIELD DEPARTURE/ARRIVAL, ENTRY CHANNELS, AND OLF'S. A 1500 PTR COULD BE ACCOMPLISHED CONSIDERING PEAK HOUR DEMAND, WITHOUT EXCEEDING THE ABOVE LISTED LEVELS. ADDITIONALLY, THE BRAC BRIEFING CONSIDERED PARKING SPACES WHICH EQUATED TO A 1513 PTR.

THE NATS DETERMINED THE LIMITING FACTOR FOR ROTARY TRAINING WAS THE CAPACITY AT THE FAMILIARIZATION OUTLYING FIELDS. THIS EQUATED TO A PTR OF 944. ADDITIONALLY, BASED ON THE PARKING SPACE CAPACITY ANALYSIS PERFORMED BY NAS WHITING FIELD AND TRAINING AIR WING FIVE ON 24 JULY 1992, AND UPDATED IN JANUARY OF 1993, THE TH-57 PTR CAPACITY IS 933.

THE PARKING SPACE CAPACITY WAS DERIVED BY USING THE PRIMARY AND ROTARY PTR AS ESTABLISHED IN JULY 1992 WITH THE FOLLOWING FORMULA:

(T-34C = PTR OF 862 / 176 SPACES USED X 309 SPACES AVAILABLE)

(TH-57 = PTR OF 544 / 128 SPACES USED X 228 SPACES AVAILABLE)

TW-5 AIRCRAFT INVENTORY ALONG WITH INSTRUCTOR PILOT MANNING WOULD HAVE TO INCREASE TO MEET THE POTENTIAL PTR CAPABILITIES.

B. Airspace

The above capacities are base on training Monday through Friday for an average of 17.15 hours daily for 237 fly days annually. Additional capacity can be accommodated by the following:

1. Increasing daily operating hours
2. Shifting more flights to after sunset
3. Training on Saturday and Sunday

Historically, NAS Whiting Field has completed higher PTR numbers than those listed above.

- The primary PTR completed in FY 87 was 1368. This is 91.2% of the 1500 PTR shown in Paragraph one.
- The advanced rotary PTR completed in FY 85 was 1142. This is 122.4% of the 933 PTR shown in paragraph two.

Airspace can be expanded above existing training airspace. There is adjacent airspace that could be used for training.

NOTES

A: NORTH FIELD CURRENTLY HAS 272 PARKING PADS WITH APPROPRIATE TIE-DOWNS IN ACCORDANCE WITH NAVFAC P-80. SIXTY NINE OF THESE TIE-DOWN SPOTS ARE USED FOR STORING AIRCRAFT AWAITING PARTS OR MAJOR MAINTENANCE. UNDER A SURGE SCENARIO, THESE AIRCRAFT COULD BE MOVED TO ABANDONED RUNWAY AND TAXIWAY AREAS ON NORTH FIELD AND TEMPORARY TIEDOWNS USED TO SECURE THE AIRCRAFT. THIS WOULD FREE UP THE 69 SPOTS ON THE "I" AND "J" LINES AND ALLOW NORMAL PARKING AT P-80 STANDARDS FOR 272 FLYABLE T-34 AIRCRAFT AND 69 NONFLYABLE AIRCRAFT FOR A TOTAL OF 341

B: SOUTH FIELD HAS PARKING SPOTS FOR 162 HELICOPTERS (BELL JET RANGER TYPE) THAT MEET P-80 CRITERIA. THE ADDITIONAL 33 SPOTS AND 9 MAINTENANCE SPOTS ALLOW FOR A TOTAL OF 204 AIRCRAFT. AN ADDITIONAL 20 SPOTS COULD BECOME AVAILABLE UNDER A SURGE SCENARIO IF TEMPORARY TIE DOWNS WERE USED ON THE MAT "A" AND "B" AREAS. THIS WOULD ALLOW 191 FLYABLE AIRCRAFT AND 33 NONFLYABLE AIRCRAFT AT SOUTH FIELD.

NOTE 1: CURRENT NAVY DIRECTIVES DO NOT REQUIRE OFFICER STUDENTS TO LIVE IN BOQ THEREFORE, BOQ SPACE IS NOT A DETERMINING FACTOR IN ADSL.

NOTE 2: RENOVATION CONTRACT TO BRING THE CBO COMPLEX UP TO CURRENT DOD STANDARDS IS IN PROGRESS. ANTICIPATED COMPLETION DATE, OF ALL CONSTRUCTION, IS EARLY FY 1996. THE NUMBERS IN THE TABLE ABOVE REFLECT CAPACITIES UPON COMPLETION OF PHASED RENOVATION.

NOTE 3: WHILE CERTAIN HOUSING UNITS (100 UNITS) ARE DESIGNATED "STUDENT HOUSING", ASSIGNMENT OF UNITS CAN BE MODIFIED TO INCREASE THAT NUMBER DEPENDENT UPON THE NUMBER OF PERMANENT STAFF OFFICERS DESIRING TO RESIDE IN MILITARY FAMILY HOUSING.

NOTE 4: ADEQUATE OFF-BASE HOUSING IN THE LOCAL COMMUNITY IS AVAILABLE, WITHIN A 45 MINUTE COMMUTE OR LESS, TO PROVIDE HOUSING FOR THE TOTAL STUDENT CAPACITY WHICH CURRENTLY EXISTS AT NAS WHITING FIELD.

NOTE 5: ADEQUATE MORALE WELFARE AND RECREATION/NAVY EXCHANGE FACILITIES (AS WELL AS OFF BASE FACILITIES) EXIST TO PROVIDE MESSING SERVICES TO ANY ANTICIPATED INCREASE IN REQUIREMENTS.

NOTE 6: HOUSING AND MESSING IS NOT A PROBLEM IN THIS AREA. IF REQUIRED, LOCAL CONSTRUCTION WOULD ACCOMODATE ANY INCREASES REQUIRED BY AN INFLUX OF PERSONNEL. THE FY 93 PRIMARY TRAINING RATE WAS 57% OF WHAT THE PRIMARY TRAINING RATE WAS IN FY 87. ADDITIONALLY THE ADVANCED ROTARY TRAINING RATE IN FY 93 WAS 43% OF THE ADVANCED ROTARY TRAINING RATE IN FY 85.

Provide the basis (including source data) of your calculations in enough detail so they can be produced.

ADDENDUM TO DATA CALL NINETEEN

1. How many simultaneous helicopter pattern operations can be conducted at Whiting Field and all OLF's (include OLF's currently used for T-34 aircraft)?

South Whiting

South Whiting is utilized as the base field for maintenance, arrival and departure point for all NOLF work, IFR and VFR airwork, and IFR and VFR cross country work. It is a day/night visual/instrument airfield with an operating control tower and radar facility. The number of aircraft that could operate at one time on the facility would vary with type operations conducted and the ability of ATC to accommodate the various evolutions. It is estimated that the airfield could accommodate 20 rotary wing aircraft simultaneously.

North Whiting

North Whiting could accommodate a limited number of rotary wing aircraft along with the fixed wing aircraft but its primary function is to handle fixed wing training. Again the number of rotary wing aircraft that could operate at one time on the facility would vary with type operations conducted and the ability of ATC to accommodate the various evolutions. It is estimated that the airfield could accommodate 20 rotary wing aircraft simultaneously.

NOLF Spencer

Maximum of 15 aircraft operating at NOLF
Left: 6 aircraft in pattern, 2 aircraft in low work
Right: 5 aircraft in pattern, 2 aircraft in low work
- (Aircraft in refueling area or crew change area, do not count towards maximum aircraft working at NOLF)

NOLF Pace

Left: 4 aircraft in pattern
Right: 4 aircraft in pattern

NOLF Santa Rosa

Maximum of 11 aircraft at NOLF
Normal Pattern: 7 aircraft
Autorotations: 4 aircraft
- (Formation flights count as one aircraft for autorotation side but as individual aircraft in determining number at site)

WC

NOLF Site 8

Maximum of 12 aircraft at NOLF

Left: 6 aircraft in pattern

Right: 6 aircraft in pattern

- (When tactical work is conducted, only 3 aircraft allowed in that pattern)

- (Formation flights count as one aircraft for side but as individual aircraft in determining number at site)

- (Aircraft in refueling area or crew change area, do not count towards maximum aircraft working at NOLF)

NOLF Harold

Currently utilize NOLF at a maximum of 07 aircraft. FAA approval allows 14 aircraft at NOLF.

Normal Pattern: 5 aircraft

Confined Landings: 2 aircraft

- (Formation flights count as one aircraft for autorotation side but as individual aircraft for number at site)

Other

It is estimated that the following Fixed Wing NOLF's could accommodate ten (10) rotary wing aircraft if a requirement existed.

NOLF Holley

NOLF Saufley

NOLF Barin

NOLF Silverdale

NOLF Summerdale

NOLF Wolf

NOLF Evergreen

NOLF Choctaw (if assigned to TW-5)

It is estimated that NOLF Brewton could accommodate eight (8) rotary wing aircraft due to the civil operations.

INFORMATION

It is the policy of the Chief of Naval Education that CNET personnel, uniformed and civilian, who provide information for use in the BRAC 95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC 95 process must certify that information. Add as many individual certifications as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for Audit purposes.

It is the policy of the Chief of Naval Education that CNET personnel, uniformed and civilian, who provide information for use in the BRAC 95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC 95 process must certify that information. Add as many individual certifications as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for Audit purposes.

3. Does this installation directly support a military or civilian area control and surveillance mission (e.g., FACSFAC, FAA support)? If so, provide details.

YES, CONSTRUCTION AND PLANNING INITIATED TO LINK NASWF ASR-8 RADAR TO PENSACOLA TRACON AND IN RETURN NASWF WILL RECEIVE PROCESSED VIDEO IN THE NORTH TOWER, SOUTH TOWER, AND RADAR.

4. Describe the role this installation plays in any logistics support and mobilization plan.

NONE

5. List any other military support missions currently conducted at/from this installation (e.g., port of embarkation for personnel, other active duty/reserve personnel or logistics transfer missions).

NONE

6. Are any new military missions planned for this installation?

FIRST NAVY JOINT PRIMARY TRAINING SQUADRON (VT-3) NOW HAS 10 AIR FORCE INSTRUCTOR PILOTS AND AN AIR FORCE PXO ONBOARD). AIR FORCE STUDENTS SCHEDULED TO ARRIVE THIS FISCAL YEAR. ADDITIONALLY, VT-3 WILL BE THE FIRST NATRACOM JOINT SQUADRON TO RECEIVE AND TRAIN IN THE JPATS AIRCRAFT.

Other Support

1. Does the installation have a role in a disaster assistance plan, search and rescue, or local evacuation plan? If so, describe.

NASWF SERVES AS THE SECONDARY COMMAND POST FOR THE CHIEF OF NAVAL EDUCATION AND TRAINING (CNET) IN THE EVENT OF A DISASTER IN PENSACOLA THAT REQUIRES EVACUATION (E.G. HURRICANE). NAS PENSACOLA HOUSING RESIDENTS AND THE FEDERAL PRISONERS AT NETPMSA SAUFLEY WOULD ALSO BE TEMPORARILY HOUSED AT NASWF. NASWF HAS ENTERED INTO WRITTEN MUTUAL AID FIRE FIGHTING AGREEMENTS WITH SEVERAL ORGANIZATIONS WITHIN SANTA ROSA COUNTY, FLORIDA AND ONE WRITTEN AGREEMENT WITH THE CITY OF BREWTON, ALABAMA. ADDITIONALLY, A WRITTEN FIRE FIGHTING AGREEMENT IS IN EFFECT WITH THE STATE OF FLORIDA. A MUTUAL UNDERSTANDING (NON-WRITTEN) IS FORMED WITH THE SANTA ROSA COUNTY, FLORIDA, FIRE FIGHTER'S ASSOCIATION THAT NASWF WILL RESPOND ON REQUEST TO EMERGENCY INCIDENTS. IN ADDITION, NASWF SERVES THE 2ND ARMY FOR NORAD SOUTHEASTERN SECTOR AS A SPOTTER FOR CHEMICAL-BIOLOGICAL-RADIOLOGICAL DEFENSE.

2. Does the installation provide any direct meteorological support to local civilian, governmental or military agencies? If so, describe.

YES, THE FOLLOWING AGENCIES ARE SUPPORTED BY NAVTRAMETOCDET NAS WHITING FIELD

1. TRAINING AIRWING FIVE
 - ALL METEOROLOGICAL SERVICES
2. BEECH AEROSPACE SERVICES (BASD)
 - WARNINGS AND FORECASTS
3. U.S. CUSTOMS

2. Give the official planning factor for percent of sorties lost due to weather (based on historic data).

**90 % EFFECTIVE WEATHER FOR TH-57 TRAINING, 10 % OF SORTIES
LOST DUE TO WEATHER.**

NOTE: ALL SORTIES ARE MADE UP.

3. Do the normal weather conditions at the most frequently used training areas pose a chronic problem for scheduling training sorties? If so, are alternate training areas used? Does the use of alternate training facilities involve relocating aircraft and support personnel to other installations during certain times of the year?

TRAINING SORTIES ARE NOT SCHEDULED BY WORKING AREAS. ALTERNATE TRAINING AREAS ARE NOT REQUIRED AS THE AREAS CURRENTLY USED ARE OF SUFFICIENT DISTANCE FROM EACH OTHER TO COMPENSATE FOR ALL BUT THE MOST WIDESPREAD WEATHER SYSTEMS. THERE ARE PROVISIONS FOR AIRCRAFT AND MAINTENANCE TO RELOCATE TEMPORARILY (DETACHMENT OPERATIONS) IN LOCAL DIRECTIVES AND CIVILIAN MAINTENANCE CONTRACTS, HOWEVER, THERE HAS BEEN NO NEED TO EXERCISE THIS OPTION FOR OVER FIVE YEARS.

Facilities

2. Air Space and Flight Training Areas

1. Is mission/training impacted by training area airspace encroachment or other conflict? For example, noise abatement/traffic procedures that limit operations. Explain.

NO

2. Do the MOAs/bombing ranges/other training areas have any scheduling restrictions/limitations?

NO

a. If scheduling problems are encountered, list all reasons.

N/A

3. Do you expect more restrictions/limitations to be imposed on the MOAs/bombing ranges/other training areas used by your unit? (Yes or No)

NO

a. If yes, state all reasons.

N/A

4. Are there any significant changes/restrictions/limitations being worked that will affect the scheduling of low level routes used by your unit? (Yes or No)

NO

a. If yes, list all changes.

N/A

5. Excluding airport traffic area, what airspace does the installation schedule/manage? Include any military operating areas, restricted areas, warning areas, low altitude tactical navigation areas, air refueling tracks/anchors, military training routes, and alert areas. List and identify each unit of airspace. Provide MOA and restricted area utilization reports as necessary.

b. Are there known noise sensitive areas (NSAs) associated with each piece of airspace? (Yes/No)
NO

- List those documented in Flight Information Publication (FLIP) and those you have concerns about.

N/A

- Do any of these NSAs affect or threaten the quality of training or mission?

NO

c. Are there any known civilian/commercial encroachments with each piece of airspace? (Yes/No)
NONE THAT DEGRADE THE TRAINING MISSION.

- List those for ground or airspace encroachment. (i.e., Public-use airports, parachute operations, gliders, etc.)

THERE ARE NUMEROUS AIRPORTS AND TALL STRUCTURES IN THE TRAINING AREA. ALL TRAINING CAN BE ACCOMPLISHED WITHOUT DEGRADATION. A WORKING AGREEMENT HAS BEEN ARRANGED WITH LOCAL ALABAMA PARACHUTE OPERATIONS THAT ALLOWS NOTIFICATION ON A REAL TIME BASIS OF JUMP OPERATIONS.

d. Are there any planned expansions to your special use airspace? Yes/No (Include new airspace proposals)

NO

- Explain proposal and give status (to include community reactions)

N/A

- What was the primary rationale supporting expansion?

N/A

e. What type of restrictions exist with each airspace? (i.e., hours of operation, subsonic, altitude restrictions, exercise only, ATC delays, etc.)

NONE

f. What is the published availability of each airspace?

- How many hours (average per year for 1990 through 1993) was the airspace scheduled?

1990 - 4,252.5

1991 - 4,267

1992 - 4,445

1993 - 5,478

TOTAL-18,442.5

- How many hours were actually used (average per year for 1990 through 1993, total of all users)?

EXACT HOURS NOT AVAILABLE AT THIS COMMAND. ACTIVATED BY JACKSONVILLE CENTER ON A REAL TIME BASIS.

- State reasons for difference between scheduled and actually used.

MOST OF THE HOURS LOST ARE MAINLY DUE TO WEATHER.

g. Is it possible to increase utilization of the airspace? (Yes or No)

YES

Facilities (cont.)

Air Space and Flight Training Areas (cont.)

h. Can it be expanded in volume and/or hours of use? (Yes or No)

YES, USE OF ADDITIONAL AIRSPACE ABOVE PRESENT ALTITUDES IS POSSIBLE AND HOURS OF OPERATION CAN BE EXTENDED

i. Describe the volume or area of the airspace.

APPROXIMATELY 60NM X 30NM = 1,800 SQ MILES

APPROXIMATELY 60NM X 30NM X 1.315NM = 2,367 CUBIC NM

j. What percentage of the airspace is usable?

100% OF THE AIRSPACE IS USABLE *

** THEORETICALLY, THE ENTIRE AIRSPACE IS USABLE. IN PRACTICE, SMALL QUANTITIES ARE NOT USED DUE TO PROXIMITY TO OTHER AREAS, LACK OF GROUND REFERENCES, LACK OF SUITABLE NAVAIDS, ETC.*

b. Will current access remain the same (status quo)? (Yes or No)

YES

c. Are reductions expected? (Yes or No)

NO

- If yes, give an estimate of the percentage of decrease and rationale for your estimate

NONE EXPECTED

d. Do current special use airspace and training areas meet all training requirements? (Yes or No)

YES

- Can some of your training requirements only be met by deployed, off-station training? (Yes or No)

NO

- If not, what degradation is experienced? Explain/identify

NONE

9. Commercial Aviation Impact

a. Is the installation joint-use (CIVILIAN/MILITARY)? YES/NO.

8. a.

Based on the NAS Whiting Field's BRAC briefing materials submission of January 1993 and the Naval Aviation Training System (NATS) Plan compiled by the Southern Division, Naval Facilities Engineering Command in May 1987, NAS Whiting Field has a T-34C PTR capacity of 1500. The NATS considered capacity levels for homefield departure/arrival, entry channels, and OLF's. A 1500 PTR could be accomplished considering peak hour demand, without exceeding the above listed levels. Additionally, the BRAC briefing considered parking spaces which equated to a 1513 PTR.

The NATS determined the limiting factor for rotary training was the capacity at the familiarization outlying fields. This equated to a PTR of 944. Additionally, based on the parking space capacity analysis performed by NAS Whiting Field and Training Air Wing FIVE on 24 July 1992, and updated in January of 1993, the TH-57 PTR capacity is 933.

The parking space capacity was derived by using the primary and rotary PTR as established in July 1992 with the following formula:
(T-34C = PTR of 862 / 176 spaces used x 309 spaces available)
(TH-57 = PTR of 544 / 128 spaces used x 228 spaces available)

TW-5 Aircraft inventory along with Instructor Pilot manning would have to increase to meet the potential PTR capabilities.

The above capacities are base on training Monday through Friday for an average of 17.15 hours daily for 237 fly days annually. Additional capacity can be accommodated by the following:

1. Increasing daily operating hours
2. Shifting more flights to after sunset
3. Training on Saturday and Sunday

Historically, NAS Whiting Field has completed higher PTR numbers than those listed above.

- The primary PTR completed in FY 87 was 1368. This is 91.2% of the 1500 PTR shown in Paragraph one.
- The advanced rotary PTR completed in FY 85 was 1142. This is 122.4% of the 933 PTR shown in paragraph two.

Airspace can be expanded above existing training airspace. There is adjacent airspace that could be used for training.
