

Data Call 1: General Installation Information, BRAC 95 Data Call #1 continued

Activity: Naval Weapons Station Charleston

3. **ACTIVITY TYPE:** Choose most appropriate type that describes your activity and completely answer all questions.

• **HOST COMMAND:** A host command is an activity that provides facilities for its own functions and the functions of other (tenant) activities. A host has accountability for Class 1 (land), and/or Class 2 (buildings, structures, and utilities) property, regardless of occupancy. It can also be a tenant at other host activities.

• Yes No (check one)

• **TENANT COMMAND:** A tenant command is an activity or unit that occupies facilities for which another activity (i.e., the host) has accountability. A tenant may have several hosts, although one is usually designated its primary host. If answer is "Yes," provide best known information for your primary host only.

• Yes No (check one)

• Primary Host (current) UIC: _____

• Primary Host (as of 01 Oct 1995) UIC: _____

• Primary Host (as of 01 Oct 2001) UIC: _____

• **INDEPENDENT ACTIVITY:** For the purposes of this Data Call, this is the "catch-all" designator, and is defined as any activity not previously identified as a host or a tenant. The activity may occupy owned or leased space. Government Owned/Contractor Operated facilities should be included in this designation if not covered elsewhere.

• Yes No (check one)

Data Call 1: General Installation Information, BRAC 95 Data Call #1 continued
Activity: Naval Weapons Station Charleston

4. **SPECIAL AREAS:** List all Special Areas. Special Areas are defined as Class 1/Class 2 property for which your command has responsibility that is not located on or contiguous to main complex.

Name	Location	UIC
NAVSTA Charleston	North Charleston, SC	00193
Hunley Park Family Housing	Between Rhode Island Ave. and New Mexico Ave., North Charleston, SC	00193

5. **DETACHMENTS:** If your activity has detachments at other locations, please list them in the table below.

Name	UIC	Location	Host name	Host UIC
N/A				

6. **BRAC IMPACT:** Were you affected by previous Base Closure and Realignment decisions (BRAC-88, -91, and/or -93)? If so, please provide a brief narrative.

YES

- Eighty six officer housing units at the Naval Station Charleston managed by WPNSTA CHASN will be excessed. Because of the reduced Naval presence in the Charleston area, WPNSTA CHASN is in the process of transferring 100 officer housing units and 400 enlisted housing units located at Hunley Park to the Charleston Air Force Base.
- Twenty commands affected by BRAC-93 closures have requested relocation to WPNSTA CHASN or for additional space.
- Naval Weapons Station Charleston will serve as host command for the Naval Command Control and Ocean Surveillance Center Inservice Engineering East Coast Division (NISE EAST). \$36M is approved for construction of new facilities for NISE EAST, which will employ 945 civil service and military personnel and approximately 250 contractor personnel.

7. **MISSION:** Do not simply report the standard mission statement. Instead, describe important functions in a bulletized format. Include anticipated mission changes and brief narrative explanation of change; also indicate if any current/projected mission changes are a result of previous BRAC-88, -91,-93 action(s).

Data Call 1: General Installation Information, BRAC 95 Data Call #1 continued
Activity: Naval Weapons Station Charleston

Current Missions

"Provide quality logistical, technical, and material support to the fleet in the areas of combat subsystems, equipment, components, and retail management . . ."

- Operate explosive outloading and storage facilities to include receipt, segregation, storage, and issue functions.
- Homeport two ammunition ships (USS Mount Baker & USS Santa Barbara).
- Operate ordnance renovation and maintenance facilities to include (encan/de-can of vertical launch Standard Missile and Tomahawk Cruise Missile). R 11/7/94
- Manage all Navy Housing in the Charleston area. (2,675 family units and 60 mobile home sites)
- Support Marine Corps Maritime Prepositioning Force (MPF) *ammunition operations*.
- Support interim Army's Strategic Mobility Logistics Base (SMLB) Program. R 11/7/94
- Support the Nuclear Power Training Unit (NPTU) which operates two nuclear operator training platforms for training fleet nuclear operators.
- Support over 33 tenants.
- Provide Morale, Welfare, and Recreation (MWR) Services.
- Operate a permitted¹ Open Burn/Open Detonation (OB/OD) Explosive Ordnance Disposal (EOD) Class "C" Range capable of up to 150 lbs net explosive weight (NEW) per open detonation and up to 4,000 lbs NEW per open burn. R 11/7/94

Projected Missions for FY 2001

- All of the above. R 11/7/94
- Future homeport for USS Mount Baker & USS Santa Barbara currently under study. R 11/7/94
- Support *entire* Marine MPF program (currently being performed at Blount Island Command, Jacksonville, FL).
- Support *complete* Army's Strategic Mobility Logistics Base (SMLB) Program. R 11/7/94
- Support for the Naval Command Control and Ocean Surveillance Center Inservice Engineering East Coast Division (NISE EAST), which will employ 945 civil service and military personnel and approximately 250 contractor personnel.

7. **MISSION:** Do not simply report the standard mission statement. Instead, describe important functions in a bulletized format. Include anticipated mission changes and brief narrative explanation of change; also indicate if any current/projected mission changes are a result of previous BRAC-88, -91,-93 action(s).

Current Missions

"Provide quality logistical, technical, and material support to the fleet in the areas of combat subsystems, equipment, components, and retail management . . ."

- **Operate explosive outloading and storage facilities to include receipt, segregation, storage, and issue functions.**
- **Homeport two ammunition ships (USS Mount Baker & USS Santa Barbara).**
- **Operate ordnance renovation and maintenance facilities to include (MK 50 Torpedo Intermediate Level Maintenance Activity (IMA) and Standard Missile IMA).**
- **Manage all Navy Housing in the Charleston area. (2,675 family units and 60 mobile home sites)**
- **Support Marine Corps Maritime Prepositioning Force (MPF) *ammunition operations.***
- **Support *interim* Army Strategic Mobility Maintenance Facility (SMMF) operations.**
- **Support the Nuclear Power Training Unit (NPTU) which operates two nuclear operator training platforms for training fleet nuclear operators.**
- **Support over 33 tenants.**
- **Provide Morale, Welfare, and Recreation (MWR) Services.**

Projected Missions for FY 2001

- **All of the above except for the two homeported ships. This is as a result of BRAC-93.**
- **Support *entire* Marine MPF program (currently being performed at Blount Island Command, Jacksonville, FL).**
- **Support *complete* Army SMMF operations.**
- **Support for the Naval Command Control and Ocean Surveillance Center**

OPNAV input to data call one Question eight "Unique Missions"

NWS Charleston

Provides explosive outloading capability to ships operating out of the Charleston, SC and Eastern U. S. area as required.

Serves as transshipment point for ships deploying and returning from deployment "for further transfer" (FFT) of ammunition to other explosive storage sites.

One of three Eastern U. S. sites capable of providing explosive storage of ammunition for ships scheduled to deploy from Eastern U. S.

F. H. Beckmann

8. **UNIQUE MISSIONS:** Describe any missions which are unique or relatively unique to the activity. Include information on projected changes. Indicate if your command has any National Command Authority or classified mission responsibilities.

Current Unique Missions

- **Homeport** for two ammunition ships (AE's) (USS Mount Baker & USS Santa Barbara). R 11/7/94
- **WPNSTA Charleston has a permitted² Open Burn/Open Detonation (OB/OD) Explosive Ordnance Disposal (EOD) Class "C" Range** capable of up to 150 lbs net explosive weight (NEW) per open detonation and up to 4,000 lbs NEW per open burn. R 11/7/94
- *Bullet deleted* R 11/7/94
- **Support Marine Corps Maritime Prepositioning Force (MPF) ammunition operations.** Provide the requisite planning, receiving, downloading, maintenance, uploading, and shipping required to support ammunition requirements for MPF Program located at Blount Island Command, Jacksonville, FL. Provide magazine space for storage of Marine Corps ammunition stock (Cog OT). Also perform repair to MILVANS required for MPF Program. R 11/7/94
- **Support interim Army's Strategic Mobility Logistics Base (SMLB) Program.** Provide ammunition MILVAN inspection, stuffing, and repair. Transport MILVANS to waterfront for loading aboard ships. Provide crane service to load containers, and perform maintenance on related support equipment (Rough Terrain Container Handler (RTCH) and chassis for moving MILVANS). Provide required financial, environmental, security, and supply/procurement services. R 11/7/94
- **Support NPTU Charleston which operates two of the six nuclear operator training platforms able to train nuclear operators for the Fleet by providing common support services in addition to Public Works support and unique Ordnance Machine Shop operations.**

²(interim status under subpart X of part B permit # SC8 170 022 620 through Environmental Protection Agency (EPA) Region 4) R 11/7/94

Activity: Naval Weapons Station Charleston

Inservice Engineering East Coast Division (NISE EAST), which will employ 945 civil service and military personnel and approximately 250 contractor personnel.

8. **UNIQUE MISSIONS:** Describe any missions which are unique or relatively unique to the activity. Include information on projected changes. Indicate if your command has any National Command Authority or classified mission responsibilities.

Current Unique Missions

- **Only East Coast MK50 Torpedo Intermediate Maintenance Activity (IMA). Performs maintenance on MK50 Warshots, providing turnaround weapons for the fleet and performs maintenance on training rounds.**
- **Support Marine Corps Maritime Prepositioning Force (MPF) ammunition operations. Provide the requisite planning, receiving, downloading, maintenance, uploading, and shipping required to support ammunition requirements for the 13 ship MPF Program located at Blount Island Command, Jacksonville, FL with each ship operating on a 30 month turnaround cycle. Provide magazine space for storage of Marine Corps ammunition stock (Cog OT). Also perform repair to MILVANS required for MPF Program.**
- **Support *interim* Army Strategic Mobility Maintenance Facility (SMMF), consisting of seven commercial ships which will adhere to a 24-30 month turnaround cycle. Provide ammunition MILVAN inspection, stuffing, and repair. Transport MILVANS to waterfront for loading aboard ships. Provide crane service to load containers, and perform maintenance on related support equipment (Rough Terrain Container Handler (RTCH) and chassis for moving MILVANS). Provide required financial, environmental, security, and supply/procurement services.**
- **Support NPTU Charleston which operates two of the six nuclear operator training platforms able to train nuclear operators for the Fleet by providing common support services in addition to Public Works support and unique Ordnance Machine Shop operations.**

Data Call 1: General Installation Information, BRAC 95 Data Call #1 continued
Activity: Naval Weapons Station Charleston

14. **FACILITY MAPS:** This is a primary responsibility of the plant account holders/host commands. Tenant activities are not required to comply with submission if it is known that your host activity has complied with the request. Maps and photos should not be dated earlier than 01 January 1991, unless annotated that no changes have taken place. Any recent changes should be annotated on the appropriate map or photo. Date and label all copies.

- **Local Area Map.** This map should encompass, at a minimum, a 50 mile radius of your activity. Indicate the name and location of all DoD activities within this area, whether or not you support that activity. Map should also provide the geographical relationship to the major civilian communities within this radius. (Provide 12 copies.)

- **Installation Map / Activity Map / Base Map / General Development Map / Site Map.** Provide the most current map of your activity, clearly showing all the land under ownership/control of your activity, whether owned or leased. Include all outlying areas, special areas, and housing. Indicate date of last update. Map should show all structures (numbered with a legend, if available) and all significant restrictive use areas/zones that encumber further development such as HERO, HERP, HERF, ESQD arcs, agricultural/forestry programs, environmental restrictions (e.g., endangered species). (Provide in two sizes: 36"x 42" (2 copies, if available); and 11"x 17" (12 copies).)

- **Aerial photo(s).** Aerial shots should show all base use areas (both land and water) as well as any local encroachment sites/issues. You should ensure that these photos provide a good look at the areas identified on your Base Map as areas of concern/interest - remember, a picture tells a thousand words. Again, date and label all copies. (Provide 12 copies of each, 8½"x 11".)

- **Air Installations Compatible Use Zones (AICUZ) Map.** (Provide 12 copies.)

**ALL DATA REQUESTED IN THIS SECTION (EXCEPT AICUZ MAP - NA)
ARE ATTACHED.**

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER ONE

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER ONE

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

This certification applies to changes made to pages 8 and 11 of BRAC95 Data Call #1.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

Notes: In the context of this Data Call

1. Base your responses for FY 1994 and previous years on executed workload, and for FY 1995 and subsequent years on workload as programmed in the FY 1995 Budget Submission and POM-96. Unless otherwise specified, use workload mixes as programmed. In estimating projected workload capabilities, use the activity configuration as of completion of the BRAC-88/91/93 actions.
2. Unless otherwise specified, for questions addressing maximum workload within this Data Call, base your response on an eight hour day/five day notional work week (1-8-5). Please identify any processes which, under normal operations, operate on a different schedule. Also, identify your "40 hour" work week schedule, if different from "1-8-5".
3. "Production" equates to the number of items processed per Fiscal Year (FY), unless otherwise specified. Report Direct Labor Man Hours (DLMHs) in thousands of Man Hours, to the nearest tenth, e.g. 32.2 K DLMHs.
4. For purposes of this Data Call, Depot maintenance is regarded as the maintenance performed on material that requires major overhaul or a complete rebuild of parts, assemblies, subassemblies, and end items, including the manufacture of parts, modifications, testing, and reclamation, as required. Depot maintenance serves to support lower categories of maintenance. Depot maintenance provides stocks of serviceable equipment by using more extensive facilities for repair than are available in lower level maintenance activities. Depot or indirect maintenance functions are identified by the type of equipment maintained or repaired.
5. Report all workload performed, clearly identifying origin of all non-DON workload.
6. Mission area work (as defined in sections 1 through 7) performed by tenant activities (e.g. MOMAG) should be reported in separate, duplicate tables in the applicable sections.

If any responses are classified, so annotate the applicable question and include those responses in a separate classified annex.

This document has been prepared in WordPerfect 5.1/5.2.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193) - BRAC 95 - DATA CALL 25 (CAPACITY)

Note: The Box below breaks out Defense Department Depot Maintenance and Industrial activities by Commodity Groups for further assessment. The highlighted items have been incorporated into this Data Call. If your activity performs depot work in any other area, please include such workload and so annotate your Data Call response.

Weapons Stations, Naval Magazines, and Strategic Missile Facilities

Questions for the Activities:

Primary Activity UIC: 00193 - *Naval Weapons Station Charleston*

Mission Area

1. Inventory

1.1 Historic and Predicted Workload. List by units of weapon type the quantities of all weapons that were receipted into/are programmed to be in your inventory for the period below. Report the single highest total onboard quantity in inventory for each Fiscal Year. (Report data as of 30 September of the Fiscal Year, where data is not available for the whole year.) For each commodity, separately identify non-DoN requirements (e.g. DoN: #x / Army: #y).

Table 1.1.a: Historic and Predicted Inventory

Ammunition / Ordnance Commodity Type	Units in Inventory (items)(All DON)

LOE: Small Arms (up to 50 cal)	13.1M	16.2M	19.4M	22.5M	25.6M	29M	29M	29M
LOE: Pyro/Demo	.7M	.8M	.9M	1M	1M	1M	1M	1M
Grenades/Mortars/Projectile	207K	213K	220K	227K	233K	240K	240K	240K

* NOTE 1: Increase is due to one hundred two magazines added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time.

** See NOTE 2 on Table 1.1.a.

2. Stowage

2.1 Identify by units of weapon type the quantity of all weapons which can be presently stored at your facility and the maximum storage capability through FY 2001. In determining maximum capability assume (a) the current projected total workload and mix remains as assigned; (b) maximum personnel and equipment support are available; and (c) facility additions are limited to that MILCON already programmed. In distributing the overall ordnance stowage, choose the best configuration based on type of facilities available and predicted requirements.

Table 2.1: Present and Predicted Stowage Capability

Ammunition / Ordnance Commodity Type	Present Stowage Capability	Maximum Stowage Capability *
Mines	0	0
Torpedoes	993	1,589
Air Launched Threat	5,199	8,314
Surface Launched Threat	1,923	3,077
Other Threat	492	787
Expendables	708K	1,133K
INERT	123K	197K
CADs/PADs	1.13M	1.8M
Strategic Nuclear	**	**
Tactical Nuclear	**	**
LOE: Rockets	9,966	15,946
LOE: Bombs	26K	42K
LOE: Gun Ammo (20mm-16")	10.3M	16.5M
LOE: Small Arms (up to 50 cal.)	29.9M	47.8M
LOE: Pyro/Demo	1.03M	1.6M
Grenades/Mortars/Projectiles	247K	395K

* See NOTE 1 on Table 1.1.b. Maximum storage is in compliance with NAVSEA 8024.2 and OP-5.

** See NOTE 2 on Table 1.1.a.

2. Stowage, continued

2.2 Provide, by facility number, the present and predicted inventories and the maximum stowage capability in tons and square feet for each stowage facility (e.g. box, igloo) under your cognizance. Using the assumptions given in section 2.1 in predicting the outyear facility utilization, distribute your overall ordnance compliment to the most likely configuration. When listing storage by facility, group facilities by location (e.g. main base, outlying area, special area, detachment), and identify that location in the space provided. Present and Predicted Inventories' SF reports the square footage required by those inventories; Maximum Stowage SF values will indicate the total square footage available. Reproduce Table 2.2 as necessary. *If any non-DON inventory is held/programmed to be held, report that material separately from your DON stock.*

Table 2.2.a: Total Facility Capability Summary

Site: WPNSTA Charleston (Explosive)

Facility Number	PRESENT INVENTORY		PREDICTED INVENTORY FY 2001		MAXIMUM STOWAGE CAPABILITY

EXPL. * MAG. 102 Each			**	**	**	280,573
Total This Site	26,547	530,940	**	702,960	**	744,542

* NOTE: These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazines is not available at this time.

** Unable to predict impact of additional magazines on the inventory tonnage.

Table 2.2.b: Total Facility Capability Summary

Site: WPNSTA Charleston (Inert)

Facility Number	PRESENT INVENTORY		PREDICTED INVENTORY FY 2001		MAXIMUM STOWAGE CAPABILITY	
	TONS	SQ FT	TONS	SQ FT	TONS	SQ FT
INERT 7 Each	2,175	89,000	5,849	89,000	7,310	89,000
Total This Site	2,175	89,000	5,849	89,000	7,310	89,000

2. Stowage, continued

2.3 In the table below, provide the basic characteristics of the stowage facilities under your cognizance. Identify the type of structure (e.g. box, igloo), its rated category, rated Net Explosive Weight (N.E.W.) and status of ESQD arc for each stowage facility listed above.

Table 2.3: Facility Rated Status

Facility Number / Type	Hazard Rating (1.1-1.4)	Rated N.E.W.	ESQD Arc		
			Established (Y/N)	Waiver (Y/N)	Waiver Expiration Date

2.4 Provide details of your calculations and the assumptions made to determine the differences reported in Table 2.2. between present and maximum capability, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased stowage workload at this activity. Indicate by Fiscal Year (FY) when programmed MILCON will increase your stowage capability and by how much. Specify any factors that significantly inhibit this facility realizing its maximum storage capability (e.g. condition of storage facilities, personnel to maintain necessary operations, operating equipment, ESQD limits, environmental constraints, physical security, etc.).

One hundred two magazines will be added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time.

No additional magazines are programmed for MILCON.

2.5 For each inhibiting item identified in question 2.4, assess a cost or impact of eliminating the inhibitor, the Fiscal Year (FY) in which such elimination would be completed, and the quantity increase in storage capability realized (express in terms of tons and square feet).

Not Applicable.

2.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance stowage at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

Mission Area

3. Throughput

3.1 Based on current programmed workload and mix, identify the current outload requirements for each commodity type of each munition stored at this facility, in each of the following operational scenarios. Provide Unit Throughput as available.

Table 3.1.a: Over-The-Pier Throughput Requirements

Munitions Type	Throughput Requirement (Tons/Day)		
	Peacetime Operations	Mobilization	Sustainment
LOE	43	196	391
Threat	30	135	270
Nuclear Threat *	0	0	0
Other	2	7	14

Table 3.1.b: Over-The-Pier Throughput Requirements

Munitions Type	Throughput Requirement (Lifts/Day)		
	Peacetime Operations	Mobilization	Sustainment
LOE	57	261	521
Threat	40	180	360
Nuclear Threat *	0	0	0
Other	3	9	19

See NOTE 2 on Table 1.1.a.

3. Throughput, continued

3.2 Identify the throughput in Tons for your facility as rated, as required under the operational conditions specified, and as executed or programmed for requested Fiscal Years. In determining your maximum rated capability, assume: (a) the current projected total workload and mix remains as assigned; (b) maximum personnel and equipment support are available; and (c) facility additions are limited to that MILCON already programmed. In distributing the overall ordnance requirement, choose the best configuration based on type of facilities available and predicted requirements. In the space provided below Table 3.2.a, detail the basis for your calculations of your maximum rated capability. If the Fiscal Years sampled in Table 3.2.b do not reflect your highest and lowest levels of activity for the period FY 1986-2001, add those years in the space provided.

Table 3.2.a: Throughput in Tons

		PIER	VERTREP	RAIL	TRUCK
Maximum Rated Capability (Annual 1-8-5) (250 operational days)	LOE	29,000	0	11,844	31,175
	Threat	20,000	0	625	21,500
	Nuclear Threat **	0	0	0	0
	Other	1,000	0	31	1,075
Requirement (Peacetime Operations) (Daily 1-8-5)	LOE	43	0	10	94
	Threat	30	0	8	68
	Nuclear Threat **	0	0	0	0
	Other	2	0	1	3
Requirement (Mobilization)* (Daily 1-12-7)	LOE	196	0	23	208
	Threat	135	0	16	193
	Nuclear Threat **	0	0	0	0
	Other	7	0	1	7
Requirement (Sustainment)* (Daily 3-8-7)	LOE	391	0	58	403
	Threat	270	0	40	278
	Nuclear Threat **	0	0	0	0
	Other	14	0	2	14

* It is recognized the Mobilization and Sustainment requirements reflect a higher state of operations and readiness, and that the associated work period may well exceed the "1-8-5".

** See NOTE 2 on Table 1.1.a.

Data Source: Maximum rated capability based on Station Mobilization Plan, with commodity split based on corporate knowledge of RSS&I planners.

3. Throughput, continued

3. Throughput, continued

3.3 Identify the annual throughput, by type of receiving vessel, in short tons, for the period requested. Specify all non-DON recipients of ordnance from your activity (e.g. Army, FMS).

Table 3.3.a: Historic/Programmed Ordnance Throughput Capability

Type of Ship		Annual Short Tons Throughput							
		FY 1986	FY 1987	FY 1988	FY 1989	FY 1990	FY 1991	FY 1992	FY 1993
Combatants	CV/ CVN	0	0	0	0	0	0	0	0
	Other	7,863	9,123	9,114	7,257	10,623	8,077	6,662	5,433
Navy Bulk (AE, AOE, AOR, etc.)		7,799	5,072	10,067	9,464	9,613	9,336	7,172	6,441
Navy Amphibious		0	0	0	0	0	0	0	0
Other Break Bulk		0	0	0	0	0	0	0	0
Container Ship		0	0	0	0	0	0	0	0

3. Throughput, continued

Table 3.3.b: Historic/Programmed Ordnance Throughput Capability

Type of Ship		Annual Short Tons Throughput							
		FY 1994	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999	FY 2000	FY 2001
Combatants	CV/ CVN	0	0	0	0	0	0	0	0
	Other	8,661	7,739	6,275	9,572	6,737	6,737	6,737	6,737
Navy Bulk (AE, AOE, AOR, etc.)		11,096	2,346	773	763	752	752	752	752
Navy Amphibious		0	0	0	0	0	0	0	0
Other Break Bulk		0	0	0	0	0	0	0	0
Container Ship (Army)		2,500	0	4,000	4,000	4,000	4,000	4,000	4,000

3. Throughput, continued

3.4 Assuming (a) the current projected total workload and mix remains as assigned; (b) that sufficient demand is available to justify maximum hiring, optimum procurement, and maximum equipment support; and (c) no major MILCON additional to that already programmed: what is the maximum extent to which this activity could expand the ordnance outload conducted, based on the current and future planned workload mixes? Please provide your response in annual throughput, by type of receiving vessel, in short tons, that could be accomplished at this facility for the period requested.

Table 3.4: Maximum Potential Ordnance Throughput Capability

Type of Ship		Short Tons Throughput (Daily, 3-8-7)						
		FY 1995	FY 1996	FY 1997	FY 1998	FY 1999	FY 2000	FY 2001
Combatants	CV / CVN	0	0	0	0	0	0	0
	Other	351	351	351	351	351	351	351
Navy Bulk (AE, AOE, AOR, etc.)		324	324	324	324	324	324	324
Navy Amphibious		0	0	0	0	0	0	0
Other Break Bulk		0	0	0	0	0	0	0
Container Ship (Army)		0	.5	.5	.5	.5	.5	.5

3. Throughput, continued

3.5 Provide details of the calculations used to complete Tables 3.4, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased outload workload at this activity.

Maximum Potential Ordnance Throughput Capability based on station mobilization plan, utilizing Pier Bravo (2 berths) and Wharf Alpha (2 berths). Estimate 52% of pier operations would be Combatants and 48% AE's. No additional major equipment is required. Berthing availability is limiting constraint.

3.6 Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform ordnance outloads? What other investments in the industrial infrastructure would you make to increase activity outload capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

Other infrastructure investment to increase our activity's outload capability is to replace Pier C with a Drive On/Drive Off Wharf which would permit additional ships to be serviced simultaneously. Actual cost and payback information is unknown.

Put a container crane on Wharf Alpha to increase outload capability of bulk cargo/MILVANs.

3.7 Are there any ultimate and overriding limiting factors to expansion of this activity's outloading workload? If so, what are they?

No known limiting factors have been identified.

3.8 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance outloading at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

Mission Area

4. Maintenance and Testing

4.1 By units of ordnance type and by DLMHs, identify what maintenance and testing has been or is programmed to be performed at this location for the period requested. Report depot-level maintenance as a separate line from intermediate-level maintenance.

Table 4.1.a: Historic and Predicted Maintenance and Testing Workload

4. Maintenance and Testing, continued

4.3 Provide details of the calculations used to complete Tables 4.2, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased maintenance and testing workload at this activity.

Torpedoes: Capabilities removed as follows: Mk 46 Torpedo (1 Oct 91), ASROC (30 Oct 93) and Mk 50 Torpedo (8 Mar 94).

Surface Launch Threat-Standard Missile: 31 Personnel. 4 production support, 2 quality assurance, 25 test/assembly producing 1,991 units annually (7 RFI daily for 232 days; test set not available 18 days annually for calibration/repairs), and producing 193 MSI and 174 MRI annually based on normal mix on a 1-8-5. No additional equipment or space required. This effort is currently performed on 1-10-4.

Other Threat-TOMAHAWK: 9 personnel. 2 production support, 1 quality surveillance and 6 mechanics producing 500 RFI units annually (2 RFI daily on 2 lines, with concurrent canister preparation in same facility on a 1-8-5). No additional equipment or space required. This effort is currently performed on 1-10-4.

Expendables: Mobile Submarine Simulator (MOSS) capability removed 2 Nov 93.

LOE and expendable items: Statement of work is limiting factor for determining capability. Normally use 7 to 17 personnel per line (depending on work to be performed) in a 2 line facility. Capabilities based on 1-8-5, this effort is currently performed on 1-10-4. No additional equipment or space is required.

SMS/MK 46/MK 48 container Depot Level Maintenance: 5 personnel, in 2 facilities, producing 2,316 units annually on a 1-8-5.

MK 48 DLM Torpedo Mounted Dispenser: 9 personnel on a single line on a 1-8-5, producing 1,500 units annually.

Maritime Pre-positioning Force container DLM: 14 personnel in 2 facilities on a 1-8-5, producing 2010 units annually. All DLM workload is currently performed on 1-10-4.

Other-Demil: 25 personnel. 4 Administration; 10 range disposal @ 16 tons per day; 5 other disposal @ 1.6 tons per day; 6 furnace demil @ 1.6 tons per day, all based on 1-8-5. This effort is currently performed on 1-10-4.

4.4 Table 4.7, on the following page, may be used as a worksheet for the following questions. Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform maintenance and testing workload? What other investments in the industrial infrastructure would you make to increase maintenance and testing capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

Unconstrained major additions to increase our activity's maintenance and testing capability are identified Table 4.7.

4.5 Are there any ultimate and overriding limiting factors to expansion of this activity's maintenance and testing workload? If so, what are they?

No known limiting factors have been identified.

4.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance maintenance and testing at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

4. Maintenance and Testing, continued

4.7 For all Maintenance and Testing identified in section 4.1, specify which items (by family of weapon) and the quantity (by number of units per year) you can maintain (e.g. Captor 50/yr, Phoenix 100/yr, etc.). Identify factors limiting your capability, the total cost to remove the limiting factor and the new rate that could be maintained.

Table 4.7: Ordnance Maintenance and Testing Factors

Ordnance (Type-Qty)	Current Rate ¹	Limiting Factors	Cost to Remove (\$K)	New Rate
MK 50 Torpedo	0	MK 644 Test Set	\$3,000	175
Standard Missile	1,991	MK 612-4 Test Set	\$4,000	3,248
Tomahawk	500	Plant Capacity ²	NA	NA
Expendables	45,000	Plant Capacity ²	NA	NA
Expendables DLM	35,500	Plant Capacity ²	NA	NA
Inert	16,500	Plant Capacity ²	NA	NA
Inert-SMS/MK 46/MK 48 Container DLM	2,316	Paint Booth and Grit Sand-Blast Reclamation Booth	\$900	3,775
Inert-MK 48 TMD DLM	1,500	Plant Capacity ²	NA	NA
Inert-MPF DLM	2,010	Plant Capacity ²	NA	NA
LOE: Rockets	57,000	Plant Capacity ²	NA	NA
LOE: Bombs	11,250	Plant Capacity ²	NA	NA
LOE: Bombs DLM	10,100	Plant Capacity ²	NA	NA
LOE: Gun Ammo	78,000	Plant Capacity ²	NA	NA
LOE: Small Arms	17,500,000	Plant Capacity ²	NA	NA
LOE: Pyro/Demo	77,500	Plant Capacity ²	NA	NA
Grenades/Mortars /Projectiles	85,000	Plant Capacity ²	NA	NA
Grenades/Mortars/Projectiles DLM	70,000	Plant Capacity ²	NA	NA
Other: Demil Furnace	150 Tons	Stationary Furnace	\$4,325	400 Tons

1. Rates are Annual Units, unless otherwise noted.

2. Current rates reflect current mix throughput capacity. Capacity exist to perform all designated levels of maintenance. DLM quantities reflect capability performing major renovation; i.e., Fuse replacement, primer replacement, link/delink of small arms, etc. Ability to perform major renovation is contingent upon availability of specialized ammunition peculiar equipment (APE).

4. Maintenance and Testing, continued

4.8 If the workload reported in section 4.1 is not the complete maintenance/testing package required by the munition, briefly describe what additional work is required, where the weapon must be sent to accomplish the work, and at what frequency the work must be done. Report depot-level maintenance as a separate line from intermediate maintenance.

Table 4.8: Additional Ordnance Maintenance and Testing Requirements

Munitions Type	Additional Work Required	Location for Additional Work	Frequency of Additional Work
Tomahawk ILM	Depot Level Repair or Retrofit	Titusville, FL or San Diego, CA	100 Annually

4.9 For each additional maintenance or testing action listed in Table 4.8 above, identify if that workload could be performed at your activity. Briefly describe what modifications would be necessary to accomplish that workload at your activity, and the associated costs.

Tomahawk Repair and Retrofit: To perform this work at WPNSTA Charleston, the renovation of a currently available facility and specialized equipment would be required. No cost estimates has been accomplished at this time.

4. Maintenance and Testing, continued

Questions 4.10-4.15 refer to Depot Maintenance workload performance only.

4.10 Given the current configuration and operation of your activity, provide the depot/industrial level maintenance by commodity group (from the Commodity List in the Notes at the beginning of this Data Call) that was executed in and is programmed for the Fiscal Years (FY) requested in units throughput and in Direct Labor Man Hours (DLMHs). Summarize ordnance commodity types serviced at this activity from the totals provided in Tables 4.1.a-d.

Table 4.10.a: Historic and Predicted Depot/Industrial Workload

Commodity Type	Throughput (Units)

Total:	17.8	18.7	21.0	20.8	20.8	20.8	20.8	20.8

4. Maintenance and Testing, continued

4.11 For each commodity group type reported in Tables 4.10.a through 4.10.d, assume (a) the current projected total depot / industrial workload remains as assigned; (b) that sufficient production demand is available to justify maximum hiring, optimum (repeat order manufacturing lead times) procurement, and maximum equipment support; and (c) no major MILCON additional to that already programmed: what is the maximum extent to which depot / industrial maintenance operations could be expanded at this activity, based on the current and future planned workload mixes, for the requested period? Please provide your response in both the absolute maximum number of units and DLMHs that could be processed at this activity by applicable commodity group. Summarize Ordnance from Table 4.2.a-b.

Table 4.11.a: Maximum Potential Depot/Industrial Workload

Commodity Type	Throughput (Units)							
	FY 1994	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999	FY 2000	FY 2001

Total:	58.3	58.3	58.3	58.3	58.3	58.3	58.3	58.3

4. Maintenance and Testing, continued

4.12 Provide details of your calculations in Tables 4.11.a-b including assumptions on additional space utilized, major equipment required, production rates, and constraints that limit increased workload by commodity group at this activity.

SMS/MK 46/MK 48 container Depot Level Maintenance: 5 personnel, in 2 facilities, producing 2,616 units annually on a 1-8-5.

MK 48 DLM Torpedo Mounted Dispenser: 9 personnel on a single line on a 1-8-5, producing 1,500 units annually.

Maritime Pre-positioning Force container DLM: 14 personnel in 2 facilities on a 1-8-5, producing 2010 units annually. All DLM workload is currently performed on 1-10-4.

Expendables and LOE items: Statement of work is limiting factor for determining capability. Normally use 7 to 17 personnel per line (depending on work to be performed) in a 2 line facility. Capabilities based on 1-8-5, this effort is currently performed on 1-10-4. No additional equipment or space is required.

4.13 Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform workload in each of the applicable commodity groups? Describe quantitatively how the changes above would increase your activity's depot/industrial level maintenance capabilities. What would the associated costs be? What would be the payback period and return on investment?

SMS/MK 46/MK 48 Container Depot Level Maintenance: See Table 4.7.

Expendables and LOE: Have sufficient space and equipment, no additional investments required.

4.14 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of depot/industrial level workload and this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

4. Maintenance and Testing, continued

4.15 Workload Summary. Enter the information from the Predicted and Potential Workload sections of Tables 4.10 and 4.11 into the table below and calculate the variance between projected and potential workloads. Again, clearly identify each commodity and include all commodities serviced at this activity.

Table 4.15.a: PREDICTED WORKLOAD VARIANCE FOR FY 1995

FY 1995 Commodity Type	Product (units)			DLMHs (In 000's)		
	Predicted Workload	Potential Workload	Variance	Predicted Workload	Potential Workload	Variance

5. Manufacturing Workload, continued

5.2 Assuming (a) the current projected total workload and mix remains as assigned; (b) that sufficient demand is available to justify maximum hiring, optimum procurement, and maximum equipment support; and (c) no major MILCON additional to that already programmed: what is the maximum extent to which this activity could expand the manufacturing conducted, based on the current and future planned workload mixes? Please provide your response in the absolute number of units throughput and DLMHs that could be accomplished at this facility. Report depot-level maintenance as a separate line from intermediate and below level maintenance.

Table 5.2.a: Maximum Potential Manufacturing Workload

5. Manufacturing Workload, continued

5.3 Provide details of the calculations used to complete Tables 5.2, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased manufacturing workload at this activity.

Manufacturing capabilities based on FY 92 and 93 average of 11 personnel producing 310 units annually, in 2 facilities, could accommodate 8 additional personnel within existing space and require no additional major equipment. Current manufacturing includes, but is not limited to: beams, strongbacks, skids, major containers, and test fixtures. Actual unit capability is determined by the commodity/scope of work requested.

5.4 Table 5.7, on following page, may be used as a worksheet for the following questions. Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform manufacturing workload? What other investments in the industrial infrastructure would you make to increase manufacturing capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

No major additional equipment required.

5.5 Are there any ultimate and overriding limiting factors to expansion of this activity's manufacturing workload? If so, what are they?

No known limiting factors have been identified.

5.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance manufacturing at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

5. Manufacturing Workload, continued

5.7 For each weapons manufacturing capability included in section 5.1 above, identify by type of weapon (Captor, Harpoon, Tomahawk, etc.) the production rate per year, and what factors limit that rate, the cost to eliminate those limiting factors, and what increased workload would be realized at that cost. In the space below the Table, please briefly describe the actions, and associated costs, necessary to improve your production rates.

Features and Capabilities

8. Stowage Facilities

8.1 List by facility number each weapon storage facility under the cognizance of this activity. Use separate tables for each location and magazine type, e.g. main base will have a table for igloo facilities and another for box magazines.

- Identify the current rated condition of each facility (Adequate/Inadequate/Substandard), its total square footage and if it is equipped with environmental controls.
- Is this facility currently used for weapons storage? If yes, what type of ordnance, from the commodity types previously listed, is currently stowed here?
- If ordnance is currently stowed in the facility, identify the reason(s) for which this ordnance is stowed at your facility from the following list: 1-own activity use (training); 2-own activity use (operational stock); 3-Receipt/Segregation/Stowage/Issue (RSSI); 4-transshipment/awaiting issue; 5-deep stow (war reserve); 6-awaiting Demil; 7-other. Explain each "other" entry in the space provided, including ordnance stowed which is not a DON asset.

* One hundred two magazines will be added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time.

¹² This facility includes four magazines.

8. Stowage Facilities, continued

8.2 Summarize the magazine characteristics reported in the Tables above (section 8.1) magazines. Table 8.2.a summarizes by location: list the total number of magazines for each type of magazine (e.g. igloo, box) at each location. Table 8.2.b summarizes by magazine type, across all locations.

Table 8.2.a: Facility Stowage Summary

Site: WPNSTA Charleston

Type of Magazine	Total This Type	Square Footage (Gross Interior)			
		Adequate	Substandard	Inadequate	Total
SP&P	50	250,000	0	0	250,000

WPNSTA Charleston	262	744,542			744,542
Total:		744,542			744,542

8. Stowage Facilities, continued

8.3 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the facilities in section 8.1 and 8.2 above where inadequate facilities are identified, provide the following information:

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

All WPNSTA Charleston explosive storage facilities are rated adequate.

8.4 For all facilities identified in the Tables of 8.1 as currently not in use for ordnance stowage, provide a brief explanation of its current use and identify its primary usage, if different.

All WPNSTA Charleston explosive storage facilities are used for ordnance storage.

8.5 If the facilities identified in Table 8.1 are distributed over a noncontiguous area (e.g. one or more Annexes, special areas, etc.), list by location all identified holdings. For any holdings detached from the main base, identify the distance from the primary activity.

Table 8.5: Facility Locations

Site (Full Title and location)	Distance
All storage facilities are located on WPNSTA Charleston.	N/A

Features and Capabilities

9. Other Facilities

9.1 Identify by facility number, giving condition code and total area, all those facilities under your cognizance utilized to perform the following functions: Intermediate and Depot level Maintenance (IM; DM) and Testing (T); Manufacturing (Mfgt); In-Service Engineering (ISE); or Technical Support (TS) services.

Table 9.1: Condition of Other Facilities

Facility Number	Function	Condition (KSF)			Total
		Adequate	Substandard	Inadequate	
47	IM	1.3	0	0	1.3
58	DM	8.3	0	0	8.3
65	Mfgt & DM	10.0	0	0	10.0
74	DM & Mfgt	10.3	0	0	10.3
75	DM	6.5	0	0	6.5
79	IM	10.3	0	0	10.3
88	IM	10.4	0	0	10.4
93	DM	16.6	0	0	16.6
94	IM	6.6	0	0	6.6
274	IM	66.0	0	0	66.0
292	IM	250.0	0	0	250.0
296	DM & Mfgt	7.5	0	0	7.5
419	IM & DM	11.0	0	0	11.0

9.2 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the facilities in section 9.1 above where inadequate facilities are identified, provide the following information:

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

All facilities identified Table 9-1 are rated adequate.

9.3 An activity's expansion capability includes its ability to reconfigure / rehab existing underutilized facilities to accept new or increased requirements. Identify in the Table below the space available for expansion, by building type and facility number.

Table 9.3: Space Available for Expansion

Building Type	Facility Number	Installation Space (KSF)			Total KSF
		Adequate	Substandard	Inadequate	
Maint/Test	79	10.3	0	0	10.3
Maint/Test	92	33.8	0	0	33.8
Maint/Test	850	14.7	0	0	14.7
Maint/Test	930	31.5	0	0	31.5

Features and Capabilities

10. Workforce

10.1 Identify in Direct Labor Man Hours the workforce employed at your activity (all locations) for the period requested. Use the conversion standard of 1615 DLMHs per Work Year. Provide the Conversion Factor employed for computing DLMHs to DLMYs.

Conversion rate = 1615 DLMHs/DLMY

Table 10.1.a: Non-Military Personnel

	FY 1986	FY 1987	FY 1988	FY 1989	FY 1990	FY 1991	FY 1992	FY 1993

Features and Capabilities, continued

11. Contractor Presence

11.1 If your activity provides space within your facilities for a contractor workforce, please list the facilities so provided. Identify the facility number, amount of space provided (KSF), name(s) of the contractor(s) supported (company), number of contractor personnel resident in your spaces, and function(s) performed by these contractors.

Table 11.1: Facilities for Contractor Support

Facility Number	(KSF)	Contractor(s)	# Personnel	Contractor Function(s)
* Open Land	30	Day & Zimmerman	100	Housing Maint.
* Open Land	23	American Lawn	18	Grounds maint.
* Open Land	19	WML, INC	30	Grounds maint.
* Open Land	8	Arcada Chemical	43	Custodial services
* Open Land	19	Beneco, INC	3	Job order contract
274	.1	Hughes Aircraft Co.	1	MK 612 Test Set Maintenance

Additional Comments: * Mobile contractor facilities are in fenced compounds located on government property.

Data Source: Code 098 called all contractors.

Features and Capabilities, continued

12. Berthing Capability

12.1 Identify the age and structural characteristics for each pier and wharf at your facility or under your cognizance by NAVFAC P-80 Category Code Number (CCN), and dimensions as requested. If unable to maintain the stated design dredge depth, provide explanatory comment following the Table. Identify water distance between adjacent piers, in lieu of slip width, where appropriate. Indicate if the pier is inside a Controlled Industrial Area or High Security Area and the Net Explosive Weight (NEW) ESQD limits, if applicable. Identify any additional controls required in the space following this Table. Identify the average number of days per year over the last eight years (the period FY 1987-1994) that the pier or wharf was out of service (OOS) for maintenance (including dredging of the associated slip).

Table 12.1: Pier and Wharf Characteristics

Pier or Wharf	Age	CCN	Moor Length (FT)	Design Dredge Depth (FT)(MLLW)	Slip Width (FT)	Pier Width (FT)	CIA / Security Area? (Y / N)	ESQD NEW Limit	Average Annual Days OOS
Alpha	26	152-10	1000	37	unlimited	75	yes	1.0m	2
Bravo	40	151-10	1494	37	unlimited	51	yes	1.95m	2
Charlie	30	151-20	160	37	unlimited	101	yes	1.5m	2
T. C.	51	152-20	1530	37	unlimited	46	yes	.00121m	2
Main	6	155-21	490	15	unlimited	33	yes	none	2
Boathouse	6	155-21	650	15	24	13	yes	none	2
S. 2312	2	151-20	535	37	unlimited	35	yes	none	2
N. 420	6	151-20	930	37	unlimited	25	yes	none	2

Data Source: WPNSTA as-built/contract drawings.

2. Berthing Capability, continued

12.2 Identify all MILCON improvements executed in the period FY 1986-1994 for each pier or wharf identified in Table 12.1

Table 12.2: Pier and Wharf MILCON

Pier or Wharf	Year MILCON Executed	Nature of Improvement
Structure 420	1987	Lengthen pier, utility upgrades
Structure 2312	1992-93	New pier

NOTE: Structure 420 is Pier X-ray which was upgraded to accommodate the Nuclear Power Training Unit (NPTU). Structure 2312 is an add-on to Pier X-ray to accommodate an expansion of NPTU.

Data Source: WPNSTA built/contract drawings.

12.3 List all ESQD waivers currently in effect, with expiration dates, for all applicable piers and wharves identified in Table 12.1.

Table 12.3: ESQD Waivers In Effect

Pier or Wharf	Nature of Waiver	Date Waiver Expires
NO WAIVERS EXIST OR ARE REQUIRED TO SUPPORT WPNSTA CHARLESTON'S ESQD ARCS		

12. Berthing Capability, continued

12.4 For all piers and wharves at your facility or under your cognizance, indicate which, if any, are RO/RO and/or aircraft accessible, and conditions which apply.

Table 12.4: Pier and Wharf Access

Pier or Wharf	RO/RO Access?	Aircraft Access?
Wharf A	Yes	Yes
Pier B	No	Yes *
Pier C	No	No *
Transportation Corps (TC) Dock	Yes	No

* A helicopter landing site is located between Pier B and C.

12.5 How much pier space is required to berth and support ancillary craft (tugs, barges, floating cranes, etc.) currently at your facility? Indicate if certain piers are uniquely suited to support these craft.

None required at this time; however, see statement at question 12.8 relative to unique capability to support ancillary craft.

12. Berthing Capability, continued

12.6 Identify the ship support characteristics for each Pier and Wharf under your activity's cognizance. Indicate if the pier or wharf is listed in OPNAVINST 3000.8. For Compressed Air and Oily Waste disposal, list only permanently installed facilities. For steam, indicate below the Table if any piers or wharves provide certified steam. If any permanent fendering arrangement limits apply, identify them in the space following the Table.

Table 12.6: Pier and Wharf Ship Support Characteristics

Pier/ Wharf	NPW Berth? (Y / N)	KVA		Comp. Air Pressure & Max Capability	Potable Water (GPD)	CHT (GPD)	Oily Waste (GPD)	Steam (LBM/HR & PSI)	Fendering Limits (Y/N)
		Shore Power	13,800 V Primary 480 V Secondary						
	Include answer in separate Annex						*		
Alpha		x	3,000 KVA		1.13 M	904 K	none	none	y
Bravo		x	5,000 KVA		1.49 M	1,192 K	none	21,000/ 80 psi	y
Charlie		x	7,500 KVA		1.42 M	1,136 K	none	28,500/ 80 psi	y
T. C.			0			0	none	none	y
Main			0			0	none	none	y
Boathouse			0			0	none	none	n
S. 2312		x	6,500 KVA		1.86 M	1,488 K	none	none	y
N. 420		x	6,500 KVA		1.86 M	1,488 K	none	none	y

Additional comments: * WPNSTA Charleston has three 5,000 gallon tanker trucks & one 7,000 gallon tanker truck to collect waste and transport to disposal.

Data Source: WPNSTA Public Works drawings, contract documents.

12. Berthing Capability, continued

12.7 For each pier and wharf listed above, state today's normal loading by ship class with current facility ship loading, the maximum berthing, maximum berthing for weapons handling evolutions, and maximum berthing to conduct maintenance. For ordnance handling capability, identify the maximum number of ships that can be moored at each pier or wharf to conduct ordnance handling evolutions, without necessitating berth shifts. Incorporate all applicable safety, ESQD, and access limitations. Include comments below the Table if necessary. For berthing in support of maintenance, list the maximum number of ships that can be serviced in maintenance availabilities at each pier or wharf without necessitating berth shifts to accommodate crane, laydown or access limitations. Provide any additional comments in the space following the Table.

Table 12.7: Pier and Wharf Normal Loading

Pier or Wharf	Typical Steady State Loading	Maximum Ship Berthing	Ordnance Handling Pierside?	Perform Maintenance Pierside?
Wharf A	See Note 1	2	1*	0
Pier B	See Note 1	2	1*	0
Transportation Corps (TC) Dock	See Note 2	2	No	1

Note 1: Either facility may berth any combination of AE's, Combatants, or Submarines when that combination does not exceed the N.E.W. reported on Table 12.1 for that berth.

Note 2: TC Dock is used to load general cargo, mechanized equipment, POV's for service members stationed over seas, and other non-explosive cargo. Handles RORO ships.

* Maintenance may be performed at all piers and wharfs; however, maintenance operations are restricted at sites when ordnance loading is being performed. Pier B can support cold iron maintenance evolutions.

12. Berthing Capability, continued

12.8 How much pier space is required to berth and support ancillary craft (tugs, barges, floating cranes, etc.) currently at your facility? Indicate if certain piers are uniquely suited to support these craft.

None at this time, however capability exists to berth and support tugs and floating cranes at finger piers and dolphins adjacent to the Transportation Dock.

12.9 What is the average pier loading in ships per day due to visiting ships at your facility/piers or wharves under your cognizance? Indicate if this varies significantly by season.

One per day. No seasonal variance.

12.10 Given no funding or manning limits, what modifications or improvements would you make to the waterfront infrastructure to increase the cold iron ship berthing capability of your installation/under your cognizance. Provide a description, cost estimates, and additional capability gained.

Cold iron ship berthing currently available at Piers B and C. Installation of a steam system on Wharf A would increase cold iron capability by two ships, at an estimated cost of \$595,000.

12.11 Describe any unique limits or enhancements on the berthing of ships at specific piers or wharves under your cognizance.

No known limitations have been identified.

Features and Capabilities, continued

13. Physical Space for Industrial Support

13.1 Identify in the table below the real estate resources which have the potential to facilitate future development and for which you are the plant account holder or into which, though a tenant, your activity could reasonably expect to expand. Complete a separate table for each individual site, i.e., main base, outlying airfields, special off-site areas, etc. The unit of measure is acres. Developed area is defined as land currently with buildings, roads, and utilities where further development is not possible without demolition of existing improvements. Include in "Restricted" areas that are restricted for future development due to environmental constraints (e.g. wetlands, landfills, archaeological sites), operational restrictions (e.g. ESQD arcs, HERO, HERP, HERF, AICUZ, ranges) or cultural resources restrictions. Identify the reason for the restriction when providing the acreage in the table. Specify any entry in "Other" (e.g. submerged lands).

Table 13.1: Real Estate Resources

Site Location: WPNSTA Charleston

Land Use	Total Acres	Developed Acreage	Available for Development	
			Restricted	Unrestricted
Maintenance	0			
Operational	9,905.4	9,905.4		
Training	11.5	11.5		
R & D	0			
Supply & Storage	4.1	4.1		
Admin	152.8	152.8		
Housing	539.9	539.9		
Recreational	1,392.5	0		
Navy Forestry Program	9,498.0	N/A		1,691.5
Navy Agricultural Outlease Program	0		N/A	N/A
Hunting/Fishing Programs	*		N/A	N/A
Other				
Total:	21,504.2 **	10,613.7	N/A	1,691.5

* Acreage varies depending on operational constraints and seasons.

** Actual total WPNSTA Charleston acres is 17,221. Navy Forestry Program overlaps with other land use categories.

Data Source: **WPNSTA general development maps dtd 16 Sep 90 & WPNSTA Master Plan dtd Oct 88**

13. Physical Space for Industrial Support, continued

13.2 Identify the general infrastructure and load capabilities for each base complex under your cognizance in the table below. Reproduce Table 13.2 for each non-contiguous location (e.g. detachments).

Table 13.2: Base Utilities and Support Services

Site: WPNSTA Charleston

Capability	On Base Capacity	Off Base Longterm Contract	Normal Steady State Load	Peak Demand
Electrical Supply (KWH)	67.5 mva	20,200 kw	151,166,400 kwh/yr	15,624,000 kwh/mo
Natural Gas (CFH)				
Sewage treatment (GPD)	0	1.2 mgd	1.1 mgd	2.2 mgd
Potable Water (GPD)	3.6 mpd		1.5 mgd	2.244 mgd
Steam (lbm/Hr)				
Long-term Parking	337,069 sy	N/A	unknown	
Short-term parking	15,970 sy	N/A	unknown	

Notes: mva=1000 kva, va=volt amperes, mgd=million gallons/day.

Data Source: Utility contracts (SCE&G, Chasn CPW, BCW&SA) and code 09 financial records of past billings, and base maps.

Features and Capabilities, continued

14. Facility Measures

14.1 Identify the facility and equipment values for all activities under your cognizance in the Table below, as executed and budgeted for the period requested. As applied herein:

- Maintenance of Real Property (MRP) is the budgetary term gathering the expenses or budget requirements for facility work and includes recurring maintenance, major repairs and minor construction (non-MILCON) inclusive of all Major Claimant funded Special Projects. It is the amount of funds spent on or budgeted for maintenance and repair of real property assets to maintain the facility in satisfactory operating condition. For purposes of this Data Call, MRP includes all M1/R1 and M2/R2 expenditures.
- Current Plant Value (CPV) refer to incorporates Class 2 Real Property and is the hypothetical dollar amount required to replace a Class 2 facility in kind at today's dollars (e.g.: the cost today to replace an existing wood frame barracks with another barracks, also wood frame).
- Acquisition Cost of Equipment (ACE) reports the total cumulative acquisition cost of all "Personal Property" equipment which includes the cost of installed equipments directly related to mission execution (such as lab test equipment). Class 2 installed capital equipment which is integral to the facility should not be reported as ACE.

Table 14.1: Expenditures and Equipment Values

FY	MRP (\$ K)	CPV (\$ K)	ACE (\$ K)
1986		492,527	
1987	8,334.372	527,498	6,095
1988	10,776.267	579,199	6,959
1989	12,325.544	Hurricane Hugo	3,335

1993	12,577.621	650,699	63
1994	9,303.900		408
1995	9,609.300		334
1996	9,113.900		1,548
1997	8,936.300		270

This includes WPNSTA Charleston (N00193), POMFLANT (N63028), and NAVELEX (N65236)

Data Source: (MRP/CPV) Code 09A1 (Finance). Prior, current, & future budgets.
 (ACE) Code 051F. Financial files, FCH460, current and future budgets.

¹³ Increase due to Hugo repairs

Features and Capabilities, continued

15. Personnel Support Facility Data

15.1 Housing and Messing. Provide data on the BOQs and BEQs assigned to your current plant account. The unit of measure for this capability is number of people housed. Use CCN to differentiate between pay grades (i.e., E1-E4, E5-E6, E7-E9, CWO-O2, O3 and above).

Table 15.1: Bachelor Housing Facilities

Facility Type, Bldg. # & CCN	Total # Beds	Total # Rooms	Adequate		Substandard		Inadequate	
			Beds	SF	Beds	SF	Beds	SF
BEQ, B-909 E1-E4	36	23	36	4,887				
E5-E6	2	2	2	6,900				
E7-E9	0	0						
CWO-02 >	0	0						

Facility Type, Bldg. # & CCN	Total # Beds	Total # Rooms	Adequate		Substandard		Inadequate	
			Beds	SF	Beds	SF	Beds	SF
BEQ, B-304 E1-E4	244	104	244	61,285				
E5-E6	4	2	4	2,402				
E7-E9	0	0						
CWO-02 >	0	0						

15.2 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the categories above where inadequate facilities are identified provide the following information:

N/A

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:

g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

15. Personnel Support Facility Data, continued

15.3 Provide data on the BOQs and BEQs projected to be assigned to your plant account in FY 1997.

The desired unit of measure for this capacity is people housed. Use CCN to differentiate between pay grades, i.e., E1-E4, E5-E6, E7-E9, CWO-O2, O3 and above.

Table 15.3: Bachelor Housing Facilities

Facility Type, Bldg. # & CCN	Total # Beds	Total # Rooms	Adequate		Substandard		Inadequate	
			Beds	SF	Beds	SF	Beds	SF
BEQ B-909								
E1-E4	36	23	36	4,887				
E5-E6	2	2	2	6,900				
E7-E9	0	0						
CWO-02 >	0	0						

Facility Type, Bldg. # & CCN	Total # Beds	Total # Rooms	Adequate		Substandard		Inadequate	
			Beds	SF	Beds	SF	Beds	SF

15.4 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the categories above where inadequate facilities are identified provide the following information:

Not Applicable

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:

g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

15. Personnel Support Facility Data, continued

15.5 Provide data on the messing facilities assigned to your current plant account.

Table 15.5: Messing Facilities

Facility Type, CC and Bldg. #	Total SF	Adequate		Substandard		Inadequate		Avg # Noon Meals Served
		Seats	SF	Seats	SF	Seats	SF	
Enlisted Dining Facility, B-306 E1-E9	1,995	72	1,995					132

15.6 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the categories above where inadequate facilities are identified provide the following information:

Not Applicable

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

15. Personnel Support Facility Data, continued

15.7 Provide data on the messing facilities projected to be assigned to your plant account in FY 1997.

Table 15.7: Messing Facilities

Facility Type, CC and Bldg. #	Total SF	Adequate		Substandard		Inadequate		Avg # Noon Meals Served
		Seats	SF	Seats	SF	Seats	SF	
Enlisted Dining Facility, B-306 E1-E9	1,995	72	1,995					132

15.8 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the categories above where inadequate facilities are identified provide the following information:

Not Applicable

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

16. Training Facilities

16.1. By Category Code Number (CCN) (5 digits), complete the following student throughput capacity table for all training facilities (adequate, substandard and inadequate) aboard the installation, including tenant activities. Include all 171-XX and 179-XX CCNs and any other applicable CCN. Following the table, describe how the reported Student Hours/Year capacity was derived. Personnel Capacity (PN) is the total number of seats available for students in spaces used instruction, based on the current configuration and use of the facilities.

EX: A type of training facility in the category 171-10 is an academic instruction classroom. If you have 10 classrooms with a capacity of 25 students per room, the design capacity reported would be 250. If these classrooms are available 8 hours a day for 300 days in a year, the capacity would be 600,000 student hours per year.

Table 16.1: Training Facilities

Parent UIC	CCN	Type of Training Facility	Total # this Type	Personnel Capacity (PN)	Capacity (Student Hours/Year)
*	171-10	Academic instruction classroom	23	47	7,833,600

* Nuclear Power Training Unit (NPTU) is a tenant located on WPNSTA Charleston. UIC's are: 47723, 47724, 47785, 47801, 49230, and 68898.

Data Source: NPTU

16. Training Facilities, continued

16.2 By facility Category Code Number (CCN), provide the number of hours per year of classroom time required for each course of instruction taught at formal schools on your installation. Include all applicable 171-XX and 179-XX CCNs. For requirements, report in column "A" the number of students per requested year; report in "B" the number of hours each student spends in this training facility for each course; report in "C" the product (AxB), the number of hours of instruction per year.

Table 16.2: Formal Classroom Training

CCN: 171-10

Type of Training Facility	School	Type of Training	FY 1993 Requirements			FY 2001 Requirements		
			A	B	C	A	B	C
Formal classroom training	Nuclear Power Training Unit	Nuclear propulsion	1,088	128	139,264	1,088	128	139,264

DATA CALL SUPPLEMENT FOR JOINT CROSS SERVICE GROUP-DEPOT MAINTENANCE

This supplement is designed to facilitate the cross service analysis required of the 1995 Base Realignment and Closure (BRAC-95) process. It requests data in a standardized format that will be used by the Joint Cross Service Group-Depot Maintenance (JCSG-DM) to develop closure and realignment alternatives to be given to the Military Departments for their analysis and final recommendations. The JCSG-DM Data Call consists of two sections, one for capacity measurements and a second measuring "measures of merit". This Data Call has been formatted to assist the preparer in providing the required information with the minimum amount of effort. If questions arise, contact your Military Department BRAC-95 office for clarification.

Notes in the context of this data call:

1. Base your responses on workload as programmed for your activity. Unless otherwise specified, use workload mixes as programmed in the FYDP.
2. Direct Labor Hours (DLH) is the common unit of measure unless specifically noted otherwise in the question.
3. Information requested in this supplement may duplicate data requested by BRAC 95 data calls from the individual Military Departments. If this occurs, read both questions carefully to ensure that they are in fact asking for identical information, and if that is the case, transfer information from one data call to the other.
4. These questions should be passed up and down the chain of command without editing or rewriting. This standardized data call is designed to support an auditable process by having each activity (regardless of Military Department assigned) respond to the same question.
5. "Core" capability calculations are to be performed in accordance with Office of the Under Secretary of Defense (Logistics) Memorandum dated November 15, 1993 (Subject: Policy for Maintaining Core Depot Maintenance Capability).
6. Capacity and utilization index calculations will be performed in accordance with the Defense Depot Maintenance Council approved update to DoD 4151.15H (Depot Maintenance Capacity/Utilization Index Measurement) dated December 5, 1990.
7. All calculations will assume a one shift, 40 hour work week.
8. Workload, capabilities, and capacities will be measured by commodity groups. A detailed breakout of the JCSG-DM commodity groups is contained in the following box. Insert the commodity groups applicable to your depot maintenance activity into the tables whenever a specific break out is requested by the question. Individual Military Departments in their Service specific data calls, may measure data in different commodity groups or categories, but for the Joint Cross Service analysis, these commodity groups must be utilized.
9. Data will be amounts as of the end of the applicable fiscal year.

Commodity Groups List

1. Aircraft Airframes:
 - a. Rotary NAVAL WEAPONS STATION CHARLESTON (UIC 00193) - BRAC 95 - DATA CALL 25 (DEPOT MAINTENANCE)
 - b. VSTOL
 - c. Fixed Wing
 - (1) Transport / Tanker / Bomber /
 - (2) Command and Control
 - (3) Light Combat
 - (4) Admin / Training
 - d. Other
2. Aircraft Components
 - Dynamic Components
 - Aircraft Structures
 - Hydraulic/Pneumatic
 - Instruments
 - Landing Gear
 - Aviation Ordnance
 - Avionics/Electronics
 - APUs
 - Other
3. Engines (Gas Turbine)
 - Aircraft
 - Ship
 - Tank
 - Blades / Vanes (Type 2)
4. Missiles and Missile Components
 - Strategic
 - Tactical / MLRS
5. Amphibians
 - Vehicles
 - Components (less GTE)
6. Ground Combat Vehicles
 - Self-propelled
 - Tanks
 - Towed Combat Vehicles
 - Components (less GTE)
7. Ground and Shipboard Communications and Electronic Equipment
 - Radar
 - Radio Communications
 - Wire Communications
 - Electronic Warfare
 - Navigational Aids
 - Electro-Optics / Night Vision
 - Satellite Control / Space Sensors
8. Automotive / Construction Equipment
9. Tactical Vehicles
 - Tactical Automotive Vehicles
 - Components
10. Ground General Purpose Items
 - Ground Support Equipment (except aircraft)
 - Small Arms / Personal Weapons
 - Munitions / Ordnance
 - Ground Generators
 - Other

**DATA CALL SUPPLEMENT
FOR
JOINT CROSS SERVICE GROUP - DEPOT MAINTENANCE**

CAPACITY

1. Capacity Utilization

1.1 Calculate the capacity index for the commodity groups applicable to depot maintenance work at your activity. Provide your answers expressed in direct labor hours (DLHs) in Table 1.1.a by commodity groups for the Fiscal Years requested.

Table 1.1.a: Capacity Index

COMMODITY GROUP	INDEX (DLHs)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	24,000	24,000	24,000	24,000	24,000
MUNITIONS/ ORDNANCE	2,000	2,000	2,000	2,000	2,000
TOTAL	26,000	26,000	26,000	26,000	26,000

OTHER (INERT): Workload includes depot level maintenance of MK46, MK48, and Surface Launched Missile System containers, and MK48 Torpedo Mounted Dispensers. Additionally, work includes depot level maintenance of MILVAN containers in support of the US Marines and US Army Prepositioning Programs.

MUNITIONS/ORDNANCE: Workload includes renovation of conventional ammunition.

1. Capacity Utilization, continued

1.2 Calculate the utilization index for the commodity groups applicable to depot maintenance work at your activity. Provide your answers expressed as a percentage (%) in Table 1.2.a by commodity groups for the Fiscal Years requested.

Table 1.2.a: Utilization Index

COMMODITY GROUP	INDEX (%)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	89	88	87	87	87
MUNITIONS/ ORDNANCE	90	0	0	0	0
TOTAL	179	88	87	87	87

1.3 Assuming (a) the current projected total workload remains as assigned; (b) that sufficient production demand is available to justify maximum hiring, with no significant investment in capital equipment; and (c) no major Military Construction additional to that already approved and funded: what is the maximum extent to which operations, by commodity group, could be expanded for depot maintenance work at your activity, based on the current and future planned workload mixes? Please provide your response in the absolute maximum number of direct labor hours (DLHs).

Table 1.3.a: Maximum Potential Capacity

COMMODITY GROUP	INDEX (DLHs) (000's)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	47.6	47.6	47.6	47.6	47.6
MUNITIONS/ ORDNANCE	10.7	10.7	10.7	10.7	10.7
TOTAL	58.3	58.3	58.3	58.3	58.3

CAPACITY

2. Plant Replacement Value

2.1 What is the estimated Plant Replacement Value (PRV) as of the end of each Fiscal Year of your depot maintenance activity expressed in thousands of dollars (\$K) as a function of the facilities and equipment? Provide your answer in Table 2.1.

Table 2.1: Expenditures and Equipment Values

PRV	\$ K				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
Facilities	8,525	8,951	9,398	9,868	10,362
Equipments	2,978	3,127	3,283	3,447	3,620
TOTAL	11,503	12,078	12,661	13,315	13,982

CAPACITY

3. Programmed Workload

3.1 Given the current configuration and operation of your activity, provide the programmed depot level workload by commodity group in Tables 3.1.a and 3.1.b. Express your answer in both dollars (\$K) and direct labor hours (DLH) for the Fiscal Years requested.

Table 3.1.a: Programmed Workload

COMMODITY GROUP	\$ K (000)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	1,583.4	1,967.5	1,948.8	1,948.8	1,948.8
MUNITIONS/ ORDNANCE	159.3	0	0	0	0
TOTAL	1,742.7	1,967.5	1,948.8	1,948.8	1,948.8

Table 3.1.b: Programmed Workload

COMMODITY GROUP	DLHs (000's)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	16.9	21.0	20.8	20.8	20.8
MUNITIONS/ ORDNANCE	1.8	0	0	0	0
TOTAL	18.7	21.0	20.8	20.8	20.8

CAPACITY

4. Service Centers of Excellence

4.1 If your activity has been designated as a Service Center of Excellence for any of the commodity groups, please identify them below.

NOT APPLICABLE

DATA CALL SUPPLEMENT
FOR
JOINT CROSS SERVICE GROUP - DEPOT MAINTENANCE

MEASURES OF MERIT

Geographic

1. Location

1.1 Specify any special strategic importance or military value consideration of your activity accruing from its geographical location.

- **WPNSTA Charleston is a warm water, explosive loading port facility.**
- **Sizable land area allows collocation of large ordnance storage and maintenance capacity with ship explosive outloading capability.**
- **Large land mass cited for explosive operations with established ESQD arcs which all fall within the geographic boundaries of WPNSTA Charleston.**
- **Encroachment on the established boundaries and ESQD arcs of the WPNSTA are insulated by wetlands, restricted waterways, and roads.**
- **It is the only coastal activity with explosive storage, outload, and maintenance capability in the southeastern United States.**
- **This capability supports Navy, Marine Corps, and Army explosive operations.**
- **The Weapons Station geographical site meets support requirements for the Nuclear Power Training Facility (NPTU).**
- **WPNSTA Charleston will upon, Naval Station Charleston closure, support the Mobile Mine Assembly Group (MOMAG) mission which is geographically linked to mine range off the Charleston, SC coast.**
- **It is the closest explosive loading port to the homeported ships located in GA, FL, and the Gulf of Mexico.**
- **WPNSTA Charleston's close proximity to the Charleston Air Force Base provides quick-trans support service for shipment of materials using the Military Air Transport.**

Geographic, continued

2. Environmental Compliance

Answers to the following questions need to reflect the particular workloads or processes affected by the environmental restrictions/compliance.

2.1 Is your activity in full compliance with all Federal, state, and local environmental regulations? If not in full compliance, provide a comprehensive list of individual regulations that require actions to be taken. What compliance waivers have been granted? When must the activity come into compliance?

Type Regulation Waiver (Date Expires) Date Must be in Compliance

We are in full compliance based upon the status of the latest inspections by federal, state, and local regulators.

2.2 Has any actual or programmed work at this installation been restricted or delayed because of environmental considerations, such as air or water quality? If so, provide the details of the impact of the restrictions or delays.

Programmed Work Restriction/Delay Describe Impact

No actual or programmed work has been restricted or delayed beyond the normal amount of time required to incorporate environmental impacts/requirements into the work.

Geographic, continued

3. Environmental Restrictions

Answers to the following questions need to reflect the particular workloads or processes affected by the environmental restrictions/compliance.

3.1 Are there any special programs relating to environmental or industrial waste considerations for your activity? If so, provide the details.

<u>Special Program</u>	<u>Environmental/Industrial Waste</u>	<u>Describe</u>
------------------------	---------------------------------------	-----------------

None

3.2 Within what provisions must the activity operate with regard to disposal of hazardous wastes and radioactive materials?

<u>Type</u>	<u>Provisions</u>	<u>Describe</u>
Federal	40CFR260-280	Hazardous waste management
State	R.61-79,260-280	Hazardous waste management

No radioactive waste generation and disposal at WPNSTA Charleston.

Geographic, continued

4. Other Collocated Activities

4.1 Are there any collocated activities that directly benefit or relate to the depot maintenance activity? If yes, list and describe the impact of each. Include benefits derived from being collocated.

<u>Collocated Activity</u>	<u>Benefit/Relationship</u>	<u>Describe Impact</u>
Army Strategic Mobility Program	Depot level maintenance to MILVANs	

4.2 Do collocated activities support, or are they supported by, the depot maintenance activity?

<u>Collocated Activity</u>	<u>Describe Relationship</u>
----------------------------	------------------------------

The Army program is supported by WPNSTA Charleston.

4.3 How would these activities and the depot maintenance activity function if they were not collocated?

<u>Collocated Activity</u>	<u>Describe Impact if not Collocated</u>
----------------------------	--

The DLM could be performed elsewhere; however, collocation with explosive storage capability and explosive outload facilities provides strategic and operation enhancements. Performance of depot level MILVAN repair at WPNSTA Charleston where the prepositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

Geographic, continued

5. Encroachment

5.1 Have operations at this activity been at all constrained to accommodate requests of the local communities?

<u>Type of Encroachment</u>	<u>Operation Impacted</u>	<u>Describe</u>
-----------------------------	---------------------------	-----------------

There have been no known requests from local communities. No operations have been restricted.

5.2 Indicate any encroachment constraints on current or future operations that would restrict future expansion.

<u>Type of Encroachment</u>	<u>Constraint on Expansion</u>	<u>Describe</u>
-----------------------------	--------------------------------	-----------------

No encroachment constraints restrict future expansion.

MEASURES OF MERIT

Facilities and Equipage

6. Unique or Peculiar Facilities

6.1 List unique or peculiar facilities, excluding equipment (e.g. runways, railheads, ports, tracks, ponds, etc.).

Facility Describe Uniqueness/Peculiarity

Wharf A - NEW limit of 1.0 million pounds.

Pier B - NEW limit of 1.95 million pounds.

Pier C - NEW limit of 1.5 million pounds.

TC Dock - NEW limit of .00121 million pounds, fuel/defuel capability.

Open/Burn Open/Detonation Range - Approved Class C disposal site.

Stationary Demilitarization Furnace - Approved Class C disposal site.

Explosive Storage and Maintenance Facilities - Established ESQD arcs are on Government property.

6.2 Indicate the reasons that these facilities are required by the depot maintenance function.

Facility Reasons Required for Maintenance

The DLM supports the prepositioning programs operated by the US Army and US Marines at WPNSTA Charleston. These programs require the handling and storage of ordnance commodities and renovation of ammunition containers. Established ESQD arcs, sited explosive storage, maintenance, and production facilities provide this support.

6.3 How could the depot maintenance functions be performed without these specialized facilities?

Facility Describe Testing Alternatives

The DLM could be performed elsewhere; however, collocation with explosive storage capability and explosive outload facilities provides strategic and operation enhancements. Performance of depot level MIL-VAN repair at WPNSTA Charleston where the prepositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

Facilities and Equipage, continued

7. Buildings and Their Condition

7.1 List the buildings used to perform the depot maintenance functions by category code numbers (five or six digit CCNs), identifying their current condition (adequate, substandard, and inadequate) in Table 7.1 in thousands of square feet (KSF).

Table 7.1: Facility Conditions

CCN	Facility Type	Condition / Area (# KSF)			Comments
		Adequate	Substandard	Inadequate	
216-10	CONVENTIONAL AMMO B-419	11.0	0	0	
216-40	MPF MILVAN DLM B- 58	8.3	0	0	
218-10	MK46/48 DLM B-65	10.0	0	0	
421-32	SMS DLM B-75	6.5	0	0	
421-32	SMS DLM B-296	7.5	0	0	
421-32	MK46,48, & SMS DLM B-74	10.3	0	0	
215-50	MK48 TMD DLM B-93	16.6	0	0	
	TOTAL	70.2	0	0	

Facilities and Equipage, continued

7.2 In Table 7.2.a, identify space available for expansion by building type for those facility category code numbers (five or six digit CCNs) that are most important to your mission. An activity's expansion capability is a function of its ability to reconfigure/rehabilitate existing underutilized facilities to accept new or increased requirements.

Table 7.2.a: Space Available for Expansion

Building ID / Type	CCN	Installation Space (KSF)			Total
		Adequate	Substandard	Inadequate	
MAINT/TEST B-930	216-40	31.5	0	0	31.5
MAINT/TEST B-79	216-40	10.3	0	0	10.3
MAINT/TEST B-92	212-10	33.8	0	0	33.8
TOTAL:		75.6	0	0	75.6

Facilities and Equipage, continued

8. Unique and/or Peculiar Capabilities and Capacities

8.1 What unique and/or peculiar capabilities and capacities does the depot maintenance activity possess?

Depot Maintenance Capability/Capacity

Describe Why Unique/Peculiar

DLM for ammunition MIL-VANS

Single authorized and certified east coast DLM repair facility for ammunition containers.

8.2 Separately list the depot maintenance facilities and equipment which are one of a kind within the Service and/or DoD.

Facility/Equipment

Describe Why It is One of a Kind

None

Facilities and Equipage, continued

9. Acreage Available for Building

9.1 What acreage on the installation does the government own in the proximity of the depot maintenance area that could be used for future expansion? Identify in the table below the real estate resources which have the potential to facilitate future development and for which you are the plant account holder or into which, though a tenant, your activity could reasonably expect to expand. Developed area is defined as land currently with buildings, roads, and utilities where further development is not possible without demolition of existing improvements. Report in "Restricted" areas that are restricted for future development due to environmental constraints (e.g. wetlands, landfills, archaeological sites), operational restrictions (e.g. ESQD arcs, HERO, HERP, HERF, AICUZ, ranges) or cultural resources restrictions. Identify the reason for the restriction when providing the acreage.

Table 9.1: Real Estate Resources

Site Location: WPNSTA Charleston

Land Use	Total Acres	Developed Acreage	Available for Development	
			Restricted	Unrestricted
Maintenance	0			
Operational	9,905.4	9,905.4		
Training	11.5	11.5		
R & D	0			
Supply & Storage	4.1	4.1		
Admin	152.8	152.8		
Housing	539.9	539.9		
Recreational	1,392.5	0		
Navy Forestry Program	9,498.0	N/A		1,691.5
Navy Agricultural Outlease Program	0		N/A	N/A
Hunting/Fishing Programs	*		N/A	N/A
Other				
Total:	21,504.2 **	10,613.7	N/A	1,691.5

* Acreage varies depending on operational constraints and seasons.

** Actual total WPNSTA Charleston acres is 17,221. Navy Forestry Program overlaps with other land use categories.

Data Source: WPNSTA general development maps dtd 16 Sep 90 & WPNSTA Master Plan dtd Oct 88

Facilities and Equipage, continued

10. Administrative Space

10.1 What amount in square feet of administrative space could be made available to the depot maintenance function?

<u>Current Use</u>	<u>Square Feet</u>	<u>Potential Use (Be Specific)</u>
--------------------	--------------------	------------------------------------

None

11. Industrial Waste

11.1 Are there any inhibiting factors that would limit future expansion on the base? Provide details if applicable.

<u>Inhibiting Factor</u>	<u>Provide Detailed Description</u>
--------------------------	-------------------------------------

Facilities and equipage to support Industrial Waste is sufficient for current and future expansion. Local Publicly Owned Treatment Works can easily accept increased waste volumes. Any additional on station treatment/pretreatment facilities required could be easily obtained. Local disposal capacity for solid industrial waste (i.e. paint wastes, asbestos waste, abrasive blast waste, petroleum contaminated soil/solids) is sufficient to support current needs and any future expansions. Sufficient current and future expansion capacity exists for industrial waste recycling needs (i.e. batteries, scrap metal, etc.)

MEASURES OF MERIT

Workload and Capabilities

Answers to the following questions are to reflect programmed amounts by commodity group, by activity in direct labor hours by Fiscal Year for FY 1996 through FY 1999.

12. Core Capabilities (DoD)

12.1 What is the amount of core capability required to support your own Service? Provide your answers in Table 12.1.a by commodity group for the Fiscal Years requested.

Table 12.1.a: Service Required Core

COMMODITY GROUP	Capability (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	38.3	38.3	38.3	38.3
MUNITIONS/ ORDNANCE	10.7	10.7	10.7	10.7
TOTAL	49.0	49.0	49.0	49.0

Workload and Capabilities, continued

12. Core Capabilities (DoD), continued

12.2 What is the amount of capability retained for the performance of other Services core? Provide your answers in Table 12.2.a by commodity group for the Fiscal Years requested.

Table 12.2.a: Core Capability Retained for Other Services

COMMODITY TYPE	Capability (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT) US ARMY	9.3	9.3	9.3	9.3
TOTAL	9.3	9.3	9.3	9.3

NOTE: DLM performed to Army Prepositioning Program ammunition containers.

12.3 What portion of the Service Core capability identified in the 12.1a above is identified as Service-Controlled Core (Title 10 responsibility)? Provide your answer in Table 12.3.a by commodity group for the Fiscal Years requested.

Table 12.3.a: Service-Controlled Core (Title 10)

COMMODITY GROUP	Capability (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	38.3	38.3	38.3	38.3
MUNITIONS/ ORDNANCE	10.7	10.7	10.7	10.7
TOTAL	49.0	49.0	49.0	49.0

Workload and Capacities, continued

13. Core Workloads

13.1 What are your total Core Workloads to be applied against capabilities identified in Tables 12.1a and 12.2a? Provide your answer (DLH) in Table 13.1.a by commodity group for the Fiscal Year requested.

Table 13.1a Total Core Workloads

COMMODITY GROUP	Workload (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	16.5	16.3	16.3	16.3
OTHER (INERT) ARMY	4.5	4.5	4.5	4.5
MUNITIONS/ ORDNANCE	0	0	0	0
TOTAL	21.0	20.8	20.8	20.8

Workload and Capabilities, continued

14. Other Workloads (Above Core)

14.1 What above core workloads do you perform by these source categories? Use the most appropriate category, but do not duplicate workload on more than one table. Provide answers in Tables 14.1.a through 14.1.g by commodity group for the Fiscal Years requested.

No FMS above core workload performed - Table 14.1a

No interservice above core workload performed - Table 14.1b

No other agency above core workload performed - Table 14.1c

No last source of repair workload performed - Table 14.1d

No within service above core workload performed - Table 14.1e

No low quantity above core workload performed - Table 14.1f

No "all other workload" above core performed - Table 14.1g

Workload and Capabilities, continued

15. Unique and/or Peculiar Workloads (Refer to Question 8.1)

15.1 What amount of the workload reported in question 8.1 is Core? Provide your answer in Table 15.1 by commodity group for the Fiscal Years requested.

Table 15.1: Unique and/or Peculiar Total Core Workload

COMMODITY GROUP	Workload (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT) MARINE MPF	7.8	7.8	7.8	7.8
OTHER (INERT) ARMY PREPO	4.5	4.5	4.5	4.5
TOTAL	12.3	12.3	12.3	12.3

15.2 What amount of the workload reported in question 8.1 is non-Core? Provide your answer in table 15.2 by commodity group for the Fiscal Years requested.

None applicable - Table 15.2

Workload and Capabilities, continued

16. Scope of Work Performed

16.1 Indicate the services/functions performed at this activity that are associated with depot maintenance, but not generally classified or considered as integral to the depot maintenance functions.

<u>Service/Function</u>	<u>Description</u>
Explosive Ordnance handling, storage, and outload operations.	<p>Wharf A - NEW limit of 1.0 million pounds. Pier B - NEW limit of 1.95 million pounds. Pier C - NEW limit of 1.5 million pounds. TC Dock - NEW limit of .00121 million pounds, fuel/defuel capability. Open/Burn Open/Detonation Range - Approved Class C disposal site. Stationary Demilitarization Furnace - Approved Class C disposal site. Explosive Storage and Maintenance Facilities - Established ESQD arcs are on Government property.</p>

16.2 Describe how these services/functions are related to accomplishment of the depot maintenance mission, and the benefits of these relationships.

<u>Service/Function</u>	<u>Describe Relationship and Benefit to Maintenance Mission</u>
-------------------------	---

These services provide essential capabilities for the repositioning programs operated by the US Army and US Marines at WPNSTA Charleston. These programs require the handling and storage of ordnance commodities, the renovation of ammunition containers, and the outload of explosive laden MILVANs as well as general cargo loads . Established ESQD arcs, cited explosive storage, maintenance and production facilities, and explosive handling piers and Wharfs provide this support.

Workload and Capabilities, continued

17. Interface with Customers

17.1 Indicate any special functions that the depot maintenance function performs that require close interface with customers, such as on-site workloads (e.g. technical assistance, crash/battle damage repairs, modification/upgrade installations).

Service/Function Describe Required Interface/Relationship/Benefit

Performance of depot level MIL-VAN repair at WPNSTA Charleston where the repositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

MEASURES OF MERIT

Costs ¹⁴

18. Real Property Maintenance (RPM)

18.1 What is your activity's backlog of real property maintenance for facilities performing depot maintenance as of 30 September 1993 (express in \$K)?

None

18.2 What were your activity's annual RPM expenses (in \$K) for Fiscal Years 1990-1993? Provide your answers in Table 18.2.

Table 18.2: Real Property Maintenance Expenses

	FY 1990	FY 1991	FY 1992	FY 1993
RPM Expenses (\$K)	163.8	172.5	181.5	191.0

19. Annual Operating Costs (Excludes Materials used in Depot Maintenance Workloads)

19.1 What were the total depot maintenance actual annual operating costs for your activity (AOC/\$K), excluding materials, used in depot maintenance workloads for Fiscal Years 1990-1993? What was the cost per direct labor hour (\$DLH) for actual executed hours reported in the DBOF? Provide your answers in Table 19.1.a.

Table 19.1: Annual Operating Costs

EXPENSE	FY 1990	FY 1991	FY 1992	FY 1993
AOC (\$ K)	1,287	973	779	1,006
\$ / DLH	44.10	48.49	52.48	78.87

¹⁴ There are inherent differences in organizational structure and accounting systems across the Services. Consequently, cost accumulations vary considerably. This severely limits the comparability of the cost per direct labor hour (\$/DLH) rates across Service lines.

Costs, continued

20. Environmental Compliance

20.1 What were your total depot maintenance actual and programmed environmental compliance costs (expressed in \$K) for Fiscal Years 1990-1997? Provide your answers in Table 20.1.

Table 20.1: Environmental Compliance Costs

COST(\$K)	FY 1990	FY 1991	FY 1992	FY 1993	FY* 1994	FY 1995	FY 1996	FY 1997
Actual	**	26	28	21	5	N/A	N/A	N/A
Programmed	**	28	29	26	20	18	17	15

* FY 94 is as of 4-33-94

** Unknown or data unavailable.

20.2 If spending is accomplished as programmed above, what will be the remaining costs (backlog at the end of Fiscal Year 1997 expressed in \$K) to bring existing facilities/equipment into environmental compliance?

21. Local Wage Rate

21.1 What were your Department of Labor local wage rates for a WG-11, step 3 for Fiscal Years 1991 through 1994?

Table 21.1: Wage Rate

Wage Rate	FY 1991	FY 1992	FY 1993	FY 1994
WG-11 / Step3	\$13.73 ph	\$14.20 ph	14.46 ph	\$14.77 ph

Costs, continued

22. Programmed Capital Investments

22.1 How much is programmed for new mission equipment for Fiscal Years 1996 through 1999? Provide your answer (in \$K) in Table 22.1.

22.2 How much is programmed for replacement equipment for Fiscal Years 1996 through 1999? Provide your answer (in \$K) in Table 22.1.

Table 22.1: Programmed Capital Investments

TYPE	FY 1996	FY 1997	FY 1998	FY 1999

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 25

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

COMNAVSEASYSKOM - Naval Weapons Stations
CINCPACFLT - Naval Magazines (on U.S. territory)
DIRSSP - Strategic Missile Facilities

Notes: In the context of this Data Call

1. Base your responses for FY 1994 and previous years on executed workload, and for FY 1995 and subsequent years on workload as programmed in the FY 1995 Budget Submission and POM-96. Unless otherwise specified, use workload mixes as programmed. In estimating projected workload capabilities, use the activity configuration as of completion of the BRAC-88/91/93 actions.
2. Unless otherwise specified, for questions addressing maximum workload within this Data Call, base your response on an eight hour day/five day notional work week (1-8-5). Please identify any processes which, under normal operations, operate on a different schedule. Also, identify your "40 hour" work week schedule, if different from "1-8-5".
3. "Production" equates to the number of items processed per Fiscal Year (FY), unless otherwise specified. Report Direct Labor Man Hours (DLMHs) in thousands of Man Hours, to the nearest tenth, e.g. 32.2 K DLMHs.
4. For purposes of this Data Call, Depot maintenance is regarded as the maintenance performed on material that requires major overhaul or a complete rebuild of parts, assemblies, subassemblies, and end items, including the manufacture of parts, modifications, testing, and reclamation, as required. Depot maintenance serves to support lower categories of maintenance. Depot maintenance provides stocks of serviceable equipment by using more extensive facilities for repair than are available in lower level maintenance activities. Depot or indirect maintenance functions are identified by the type of equipment maintained or repaired.
5. Report all workload performed, clearly identifying origin of all non-DON workload.
6. Mission area work (as defined in sections 1 through 7) performed by tenant activities (e.g. MOMAG) should be reported in separate, duplicate tables in the applicable sections.

If any responses are classified, so annotate the applicable question and include those responses in a separate classified annex.

This document has been prepared in WordPerfect 5.1/5.2.

Note: The Box below breaks out Defense Department Depot Maintenance and Industrial activities by Commodity Groups for further assessment. The highlighted items have been incorporated into this Data Call. If your activity performs depot work in any other area, please include such workload and so annotate your Data Call response.

* NOTE 1: Increases in inventory are possible due to one hundred three magazines added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time.

Revised pg

2. Stowage

2.1 Identify by units of weapon type the quantity of all weapons which can be presently stored at your facility and the maximum storage capability through FY 2001. In determining maximum capability assume (a) the current projected total workload and mix remains as assigned; (b) maximum personnel and equipment support are available; and (c) facility additions are limited to that MILCON already programmed. In distributing the overall ordnance stowage, choose the best configuration based on type of facilities available and predicted requirements.

Table 2.1: Present and Predicted Stowage Capability

Ammunition / Ordnance Commodity Type	Present Stowage Capability	Maximum Stowage Capability *
Mines	0	0

(R)

2. Stowage, continued

2.2 Provide, by facility number, the present and predicted inventories and the maximum stowage capability in tons and square feet for each stowage facility (e.g. box, igloo) under your cognizance. Using the assumptions given in section 2.1 in predicting the outyear facility utilization, distribute your overall ordnance compliment to the most likely configuration. When listing storage by facility, group facilities by location (e.g. main base, outlying area, special area, detachment), and identify that location in the space provided. Present and Predicted Inventories' SF reports the square footage required by those inventories; Maximum Stowage SF values will indicate the total square footage available. Reproduce Table 2.2 as necessary. *If any non-DON inventory is held/programmed to be held, report that material separately from your DON stock.*

INTENTIONALLY LEFT BLANK

2.4 Provide details of your calculations and the assumptions made to determine the differences reported in Table 2.2. between present and maximum capability, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased stowage workload at this activity. Indicate by Fiscal Year (FY) when programmed MILCON will increase your stowage capability and by how much. Specify any factors that significantly inhibit this facility realizing its maximum storage capability (e.g. condition of storage facilities, personnel to maintain necessary operations, operating equipment, ESQD limits, environmental constraints, physical security, etc.).

One hundred three magazines will be added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time. (R)

No additional magazines are programmed for MILCON.

2.5 For each inhibiting item identified in question 2.4, assess a cost or impact of eliminating the inhibitor, the Fiscal Year (FY) in which such elimination would be completed, and the quantity increase in storage capability realized (express in terms of tons and square feet).

Not Applicable.

2.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance stowage at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

Mission Area

3. Throughput

3.1 Based on current programmed workload and mix, identify the current outload requirements for each commodity type of each munition stored at this facility, in each of the following operational scenarios. Provide Unit Throughput as available.

Table 3.1.a: Over-The-Pier Throughput Requirements

Munitions Type	Throughput Requirement (Tons/Day)		
	Peacetime Operations	Mobilization	Sustainment
LOE	43	196	391
Threat	30	135	270
Nuclear Threat	0	0	0
Other	2	7	14

Table 3.1.b: Over-The-Pier Throughput Requirements

Munitions Type	Throughput Requirement (Lifts/Day)		
	Peacetime Operations	Mobilization	Sustainment
LOE	57	261	521
Threat	40	180	360
Nuclear Threat	0	0	0
Other	3	9	19

Revised pg

3. Throughput, continued

3.2 Identify the throughput in Tons for your facility as rated, as required under the operational conditions specified, and as executed or programmed for requested Fiscal Years. In determining your maximum rated capability, assume: (a) the current projected total workload and mix remains as assigned; (b) maximum personnel and equipment support are available; and (c) facility additions are limited to that MILCON already programmed. In distributing the overall ordnance requirement, choose the best configuration based on type of facilities available and predicted requirements. In the space provided below Table 3.2.a, detail the basis for your calculations of your maximum rated capability. If the Fiscal Years sampled in Table 3.2.b do not reflect your highest and lowest levels of activity for the period FY 1986-2001, add those years in the space provided.

Table 3.2.a: Throughput in Tons

		PIER	VERTREP	RAIL	TRUCK
Maximum Rated Capability (Daily 1-8-5)	LOE	130	0	19	134
	Threat	90	0	13	93
	Nuclear Threat	0	0	0	0
	Other	5	0	1	5
Requirement (Peacetime Operations) (Daily 1-8-5)	LOE	43	0	10	99
	Threat	30	0	8	68
	Nuclear Threat	0	0	0	0
	Other	2	0	1	3
Requirement (Mobilization)* (Daily 1-12-7)	LOE	196	0	23	208
	Threat	135	0	16	143
	Nuclear Threat	0	0	0	0
	Other	7	0	1	7
Requirement (Sustainment)* (Daily 3-8-7)	LOE	391	0	58	403
	Threat	270	0	40	278
	Nuclear Threat	0	0	0	0
	Other	14	0	2	14

* It is recognized the Mobilization and Sustainment requirements reflect a higher state of operations and readiness, and that the associated work period may well exceed the "1-8-5".

Data Source: Maximum rated capability based on Station Mobilization Plan, with commodity split based on corporate knowledge of RSS&I planners.

3. Throughput, continued

3.4 Assuming (a) the current projected total workload and mix remains as assigned; (b) that sufficient demand is available to justify maximum hiring, optimum procurement, and maximum equipment support; and (c) no major MILCON additional to that already programmed: what is the maximum extent to which this activity could expand the ordnance outload conducted, based on the current and future planned workload mixes? Please provide your response in annual throughput, by type of receiving vessel, in short tons, that could be accomplished at this facility for the period requested.

Table 3.4: Maximum Potential Ordnance Throughput Capability

3. Throughput, continued

3.5 Provide details of the calculations used to complete Tables 3.4, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased outload workload at this activity.

Maximum Potential Ordnance Throughput Capability based on station mobilization plan, utilizing Pier Bravo (2 berths), Wharf Alpha (2 berths), and Transportation Dock (TC) (2 berths). Estimate 52% of pier operations would be Combatants and 48% AE's. No additional major equipment is required. Berthing availability is limiting constraint.

3.6 Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform ordnance outloads? What other investments in the industrial infrastructure would you make to increase activity outload capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

Other infrastructure investment to increase our activity's outload capability is to replace Pier C with a Drive On/Drive Off Wharf which would permit additional ships to be serviced simultaneously. Actual cost and payback information is unknown.

Put a container crane on Wharf Alpha to increase outload capability of bulk cargo/MILVANs.

3.7 Are there any ultimate and overriding limiting factors to expansion of this activity's outloading workload? If so, what are they?

No known limiting factors have been identified.

3.8 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance outloading at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

Mission Area

4. Maintenance and Testing

4.1 By units of ordnance type and by DLMHs, identify what maintenance and testing has been or is programmed to be performed at this location for the period requested. Report depot-level maintenance as a separate line from intermediate-level maintenance.

*Revised pg***4. Maintenance and Testing, continued**

4.3 Provide details of the calculations used to complete Tables 4.2, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased maintenance and testing workload at this activity.

Torpedoes: Capabilities removed as follows: Mk 46 Torpedo (1 Oct 91), ASROC (30 Oct 93) and Mk 50 Torpedo (8 Mar 94).

Surface Launch Threat-Standard Missile: 31 Personnel. 4 production support, 2 quality assurance, 25 test/assembly producing 1,991 units annually (7 RFI daily for 232 days; test set not available 18 days annually for calibration/repairs), and producing 193 MSI and 174 MRI annually based on normal mix on a 1-8-5. No additional equipment or space required. This effort is currently performed on 1-10-4.

Other Threat-TOMAHAWK: 9 personnel. 2 production support, 1 quality surveillance and 6 mechanics producing 500 RFI units annually (2 RFI daily on 2 lines, with concurrent canister preparation in same facility on a 1-8-5). No additional equipment or space required. This effort is currently performed on 1-10-4.

Expendables: Mobile Submarine Simulator (MOSS) capability removed 2 Nov 93.

LOE and expendable items: Statement of work is limiting factor for determining capability. Normally use 7 to 17 personnel per line (depending on work to be performed) in three facilities with 2 line capability. Capabilities based on 1-8-5, this effort is currently performed on 1-10-4. No additional equipment or space is required.

SMS/MK 46/MK 48 container Depot Level Maintenance: 5 personnel, in 2 facilities, producing 2,616 units annually on a 1-8-5.

MK 48 DLM Torpedo Mounted Dispenser: 9 personnel on a single line on a 1-8-5, producing 1,500 units annually.

Maritime Pre-positioning Force container DLM: 14 personnel in 2 facilities on a 1-8-5, producing 2010 units annually. All DLM workload is currently performed on 1-10-4.

Other-Demil: 25 personnel. 4 Administration; 10 range disposal @ 16 tons per day; 5 other disposal @ 1.6 tons per day; 6 furnace demil @ .6 tons per day, all based on 1-8-5. This effort is currently performed on 1-10-4.

SMS/MK 46/MK 48 container Depot Level Maintenance: 5 personnel, in 2 facilities, producing 2,616 units annually on a 1-8-5.

MK 48 DLM Torpedo Mounted Dispenser: 9 personnel on a single line on a 1-8-5, producing 1,500 units annually.

Maritime Pre-positioning Force container DLM: 14 personnel in 2 facilities on a 1-8-5, producing 2010 units annually. All DLM workload is currently performed on 1-10-4.

Other-Demil: 25 personnel. 4 Administration; 10 range disposal @ 16 tons per day; 5 other disposal @ 1.6 tons per day; 6 furnace demil @ 1.6 tons per day, all based on 1-8-5. This effort is currently performed on 1-10-4.

(R)

4.4 Table 4.7, on the following page, may be used as a worksheet for the following questions. Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform maintenance and testing workload? What other investments in the industrial infrastructure would you make to increase maintenance and testing capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

Unconstrained major additions to increase our activity's maintenance and testing capability are identified Table 4.7.

4.5 Are there any ultimate and overriding limiting factors to expansion of this activity's maintenance and testing workload? If so, what are they?

No known limiting factors have been identified.

4.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance maintenance and testing at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

Revised pg

4. Maintenance and Testing, continued

4.7 For all Maintenance and Testing identified in section 4.1, specify which items (by family of weapon) and the quantity (by number of units per year) you can maintain (e.g. Captor 50/yr, Phoenix 100/yr, etc.). Identify factors limiting your capability, the total cost to remove the limiting factor and the new rate that could be maintained.

Table 4.7: Ordnance Maintenance and Testing Factors

Ordnance (Type-Qty)	Current Rate ¹	Limiting Factors	Cost to Remove (\$K)	New Rate
MK 50 Torpedo	0	MK 644 Test Set	\$3,000	175
Standard Missile	1,991	MK 612-4 Test Set	\$4,000	3,248
Tomahawk	500	Plant Capacity ²	NA	NA
Expendables	446	Plant Capacity ²	NA	NA
Inert	1,664	Plant Capacity ²	NA	NA
Inert-SMS/MK 46/MK 48 Container DLM	2,616	Paint Booth and Grit Sand-Blast Reclamation Booth	\$900	3,775
Inert-MK 48 TMD DLM	1,500	Plant Capacity ²	NA	NA

LOE: Bombs DLM	553	Plant Capacity ²	NA	NA
LOE: Gun Ammo	38,281	Plant Capacity ²	NA	NA
LOE: Small Arms	214,468	Plant Capacity ²	NA	NA
LOE: Pyro/Demo	0	Plant Capacity ²	NA	NA
Grenades/Mortars /Projectiles	155,999	Plant Capacity ²	NA	NA
Other: Demil Furnace	150 Tons	Stationary Furnace	\$4,325	400 Tons

1. Rates are Annual Units, unless otherwise noted.

2. Current rates reflect current mix throughput capacity. Capacity exist to perform all designated levels of maintenance. DLM quantities reflect capability performing major renovation; i.e., Fuse replacement, primer replacement, link/delink of small arms, etc. Ability to perform major renovation is contingent upon availability of specialized ammunition peculiar equipment (APE).

4. Maintenance and Testing, continued

4.7 For all Maintenance and Testing identified in section 4.1, specify which items (by family of weapon) and the quantity (by number of units per year) you can maintain (e.g. Captor 50/yr, Phoenix 100/yr, etc.). Identify factors limiting your capability, the total cost to remove the limiting factor and the new rate that could be maintained.

Table 4.7: Ordnance Maintenance and Testing Factors

Ordnance (Type-Qty)	Current Rate ¹	Limiting Factors	Cost to Remove (\$K)	New Rate

Other: Demil Furnace	150 Tons	Stationary Furnace	\$4,325	400 Tons

(P)

1. Rates are Annual Units, unless otherwise noted.

2. Current rates reflect current mix throughput capacity. Capacity exist to perform all designated levels of maintenance. DLM quantities reflect capability performing major renovation; i.e., Fuse replacement, primer replacement, link/delink of small arms, etc. Ability to perform major renovation is contingent upon availability of specialized ammunition peculiar equipment (APE).

4. Maintenance and Testing, continued

4.8 If the workload reported in section 4.1 is not the complete maintenance/testing package required by the munition, briefly describe what additional work is required, where the weapon must be sent to accomplish the work, and at what frequency the work must be done. Report depot-level maintenance as a separate line from intermediate maintenance.

Table 4.8: Additional Ordnance Maintenance and Testing Requirements

Munitions Type	Additional Work Required	Location for Additional Work	Frequency of Additional Work
Tomahawk ILM	Depot Level Repair or Retrofit	Titusville, FL or San Diego, CA	100 Annually

4.9 For each additional maintenance or testing action listed in Table 4.8 above, identify if that workload could be performed at your activity. Briefly describe what modifications would be necessary to accomplish that workload at your activity, and the associated costs.

Tomahawk Repair and Retrofit: To perform this work at WPNSTA Charleston, the renovation of a currently available facility and specialized equipment would be required. No cost estimates has been accomplished at this time.

4. Maintenance and Testing, continued

Questions 4.10-4.15 refer to Depot Maintenance workload performance only.

4.10 Given the current configuration and operation of your activity, provide the depot/industrial level maintenance by commodity group (from the Commodity List in the Notes at the beginning of this Data Call) that was executed in and is programmed for the Fiscal Years (FY) requested in units throughput and in Direct Labor Man Hours (DLMHs). Summarize ordnance commodity types serviced at this activity from the totals provided in Tables 4.1.a-.d.

4. Maintenance and Testing, continued

4.12 Provide details of your calculations in Tables 4.11.a-b including assumptions on additional space utilized, major equipment required, production rates, and constraints that limit increased workload by commodity group at this activity.

SMS/MK 46/MK 48 container Depot Level Maintenance: 5 personnel, in 2 facilities, producing 2,616 units annually on a 1-8-5. (R)

MK 48 DLM Torpedo Mounted Dispenser: 9 personnel on a single line on a 1-8-5, producing 1,500 units annually.

Maritime Pre-positioning Force container DLM: 14 personnel in 2 facilities on a 1-8-5, producing 2010 units annually. All DLM workload is currently performed on 1-10-4.

Expendables and LOE items: Statement of work is limiting factor for determining capability. Normally use 7 to 17 personnel per line (depending on work to be performed) in a 2 line facility. Capabilities based on 1-8-5, this effort is currently performed on 1-10-4. No additional equipment or space is required.

4.13 Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform workload in each of the applicable commodity groups? Describe quantitatively how the changes above would increase your activity's depot/industrial level maintenance capabilities. What would the associated costs be? What would be the payback period and return on investment?

SMS/MK 46/MK 48 Container Depot Level Maintenance: See Table 4.7.

Expendables and LOE: Have sufficient space and equipment, no additional investments required.

4.14 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of depot/industrial level workload and this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

5. Manufacturing Workload, continued

5.2 Assuming (a) the current projected total workload and mix remains as assigned; (b) that sufficient demand is available to justify maximum hiring, optimum procurement, and maximum equipment support; and (c) no major MILCON additional to that already programmed: what is the maximum extent to which this activity could expand the manufacturing conducted, based on the current and future planned workload mixes? Please provide your response in the absolute number of units throughput and DLMHs that could be accomplished at this facility. Report depot-level maintenance as a separate line from intermediate and below level maintenance.

5. Manufacturing Workload, continued

5.3 Provide details of the calculations used to complete Tables 5.2, including assumptions on additional space utilized, major equipment required, production rates, and constraint that limit increased manufacturing workload at this activity.

Manufacturing capabilities based on FY 92 and 93 average of 11 personnel producing 310 units annually, in 2 facilities, could accommodate 8 additional personnel within existing space and require no additional major equipment. Current manufacturing includes, but is not limited to: beams, strongbacks, skids, major containers, and test fixtures. Actual unit capability is determined by the commodity/scope of work requested.

5.4 Table 5.7, on following page, may be used as a worksheet for the following questions. Given an environment unconstrained by funds or manning, what Industrial Plant Equipment (IPE) would you change (add, delete, or modify) to increase your activity's capability to perform manufacturing workload? What other investments in the industrial infrastructure would you make to increase manufacturing capabilities? Describe quantitatively how the changes above would increase your activity's capabilities. What would the associated costs be? What would be the payback period and return on investment?

No major additional equipment required.

5.5 Are there any ultimate and overriding limiting factors to expansion of this activity's manufacturing workload? If so, what are they?

No known limiting factors have been identified.

5.6 Are there any environmental, legal, or otherwise limiting factors that inhibit further the development of ordnance manufacturing at this activity (AICUZ encroachment, pollutant discharge, etc.)?

No known limiting factors have been identified.

5. Manufacturing Workload, continued

5.7 For each weapons manufacturing capability included in section 5.1 above, identify by type of weapon (Captor, Harpoon, Tomahawk, etc.) the production rate per year, and what factors limit that rate, the cost to eliminate those limiting factors, and what increased workload would be realized at that cost. In the space below the Table, please briefly describe the actions, and associated costs, necessary to improve your production rates.

Table 5.7: Manufacturing Production Factors

Features and Capabilities

8. Stowage Facilities

8.1 List by facility number each weapon storage facility under the cognizance of this activity. Use separate tables for each location and magazine type, e.g. main base will have a table for igloo facilities and another for box magazines.

- Identify the current rated condition of each facility (Adequate/Inadequate/Substandard), its total square footage and if it is equipped with environmental controls.
- Is this facility currently used for weapons storage? If yes, what type of ordnance, from the commodity types previously listed, is currently stowed here?
- If ordnance is currently stowed in the facility, identify the reason(s) for which this ordnance is stowed at your facility from the following list: 1-own activity use (training); 2-own activity use (operational stock); 3-Receipt/Segregation/Stowage/Issue (RSSI); 4-transshipment/awaiting issue; 5-deep stow (war reserve); 6-awaiting Demil; 7-other. Explain each "other" entry in the space provided, including ordnance stowed which is not a DON asset.

* One hundred three magazines will be added to WPNSTA Charleston's plant account between 1995 and 2000. These magazines are currently used by the Polaris Missile Facility Atlantic (POMFLANT) which is a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Exact loading of each magazine is not available at this time and they are identified with a '7' in the "Reason for Stowage" column.

Table 8.2.b: Facility Stowage Summary

Type Magazine: See Table 8.2a (All Magazines located one site*)

Location	Total # Magazines	Square Footage			
		Adequate	Substandard	Inadequate	Total
WPNSTA Charleston	147	485,803	0	0	485,803
POMFLANT	103	315,197	0	0	315,197
Total:		801,000	0	0	801,000

* NOTE: One hundred three magazines are currently controlled by POMFLANT, a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). The magazines are environmentally controlled, connected to an IDS, and the area is surrounded by double fencing and perimeter lighting.

(R)

8. Stowage Facilities, continued

8.3 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the facilities in section 8.1 and 8.2 above where inadequate facilities are identified, provide the following information:

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

All WPNSTA Charleston explosive storage facilities are rated adequate.

8.4 For all facilities identified in the Tables of 8.1 as currently not in use for ordnance stowage, provide a brief explanation of its current use and identify its primary usage, if different.

All WPNSTA Charleston explosive storage facilities are used for ordnance storage.

8.5 If the facilities identified in Table 8.1 are distributed over a noncontiguous area (e.g. one or more Annexes, special areas, etc.), list by location all identified holdings. For any holdings detached from the main base, identify the distance from the primary activity.

Table 8.5: Facility Locations

Site (Full Title and location)	Distance
All storage facilities are located on WPNSTA Charleston.	N/A

Features and Capabilities

9. Other Facilities

9.1 Identify by facility number, giving condition code and total area, all those facilities under your cognizance utilized to perform the following functions: Intermediate and Depot level Maintenance (IM; DM) and Testing (T); Manufacturing (Mfgt); In-Service Engineering (ISE); or Technical Support (TS) services.

Table 9.1: Condition of Other Facilities

(R

Facility Number	Function	Condition (KSF)			Total
		Adequate	Substandard	Inadequate

(R +

9.2 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the facilities in section 9.1 above where inadequate facilities are identified, provide the following information:

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

All facilities identified Table 9-1 are rated adequate.

9.3 An activity's expansion capability includes its ability to reconfigure / rehab existing underutilized facilities to accept new or increased requirements. Identify in the Table below the space available for expansion, by building type and facility number.

Table 9.3: Space Available for Expansion

Building Type	Facility Number	Installation Space (KSF)			Total KSF
		Adequate	Substandard	Inadequate	
Maint/Test	79	10.3	0	0	10.3
Maint/Test	92	33.8	0	0	33.8
Maint/Test	850	14.7	0	0	14.7
Maint/Test	930	31.5	0	0	31.5

Features and Capabilities

10. Workforce

10.1 Identify in Direct Labor Man Hours the workforce employed at your activity (all locations) for the period requested. Use the conversion standard of 1615 DLMHs per Work Year. Provide the Conversion Factor employed for computing DLMHs to DLMYs.

Conversion rate = 1615 DLMHs/DLMY

Table 10.1.a: Non-Military Personnel

Features and Capabilities, continued

12. Berthing Capability

12.1 Identify the age and structural characteristics for each pier and wharf at your facility or under your cognizance by NAVFAC P-80 Category Code Number (CCN), and dimensions as requested. If unable to maintain the stated design dredge depth, provide explanatory comment following the Table. Identify water distance between adjacent piers, in lieu of slip width, where appropriate. Indicate if the pier is inside a Controlled Industrial Area or High Security Area and the Net Explosive Weight (NEW) ESQD limits, if applicable. Identify any additional controls required in the space following this Table. Identify the average number of days per year over the last eight years (the period FY 1987-1994) that the pier or wharf was out of service (OOS) for maintenance (including dredging of the associated slip).

Table 12.1: Pier and Wharf Characteristics

Pier or Wharf	Age	CCN	Moor Length (FT)	Design Dredge Depth (FT)(MLLW)	Slip Width (FT)	Pier Width (FT)	CIA / Security Area? (Y / N)	ESQD NEW Limit	Average Annual Days OOS

12. Berthing Capability, continued

12.2 Identify all MILCON improvements executed in the period FY 1986-1994 for each pier or wharf identified in Table 12.1

Table 12.2: Pier and Wharf MILCON

Pier or Wharf	Year MILCON Executed	Nature of Improvement
Structure 420	1987	Lengthen pier, utility upgrades
Structure 2312	1992-93	New pier

NOTE: Structure 420 is Pier X-ray which was upgraded to accommodate the Nuclear Power Training Unit (NPTU). Structure 2312 is an add-on to Pier X-ray to accommodate an expansion of NPTU.

Data Source: WPNSTA built/contract drawings.

12.3 List all ESQD waivers currently in effect, with expiration dates, for all applicable piers and wharves identified in Table 12.1.

Table 12.3: ESQD Waivers In Effect

Pier or Wharf	Nature of Waiver	Date Waiver Expires
NO WAIVERS EXIST OR ARE REQUIRED TO SUPPORT WPNSTA CHARLESTON'S ESQD ARCS		

12. Berthing Capability, continued

12.4 For all piers and wharves at your facility or under your cognizance, indicate which, if any, are RO/RO and/or aircraft accessible, and conditions which apply.

Table 12.4: Pier and Wharf Access

Pier or Wharf	RO/RO Access?	Aircraft Access?
Wharf A	Yes	Yes
Pier B	No	Yes *
Pier C	No	No *
Transportation Corps (TC) Dock	Yes	No

* A helicopter landing site is located between Pier B and C.

12.5 How much pier space is required to berth and support ancillary craft (tugs, barges, floating cranes, etc.) currently at your facility? Indicate if certain piers are uniquely suited to support these craft.

None required at this time; however, see statement at question 12.8 relative to unique capability to support ancillary craft.

12. Berthing Capability, continued

12.6 Identify the ship support characteristics for each Pier and Wharf under your activity's cognizance. Indicate if the pier or wharf is listed in OPNAVINST 3000.8. For Compressed Air and Oily Waste disposal, list only permanently installed facilities. For steam, indicate below the Table if any piers or wharves provide certified steam. If any permanent fendering arrangement limits apply, identify them in the space following the Table.

Table 12.6: Pier and Wharf Ship Support Characteristics

Pier/ Wharf	NPW Berth? (Y / N)	KVA		Comp. Air Pressure & Max Capability	Potable Water (GPD)	CHT (GPD)	Oily Waste (GPD) *	Steam (LBM/HR & PSI)	Fendering Limits (Y/N)
		Shore Power	13,800 V Primary 480 V Secondary						
	Include answer in separate Annex								
Alpha		x	3,000 KVA		1.13 M	904 K	none	none	y
Bravo		x	5,000 KVA		1.49 M	1,192 K	none	21,000/ 80 psi	y
Charlie		x	7,500 KVA		1.42 M	1,136 K	none	28,500/ 80 psi	y
T. C.			0			0	none	none	y
Main			0			0	none	none	y
Boathouse			0			0	none	none	n
S. 2312		x	6,500 KVA		1.86 M	1,488 K	none	none	y
N. 420		x	6,500 KVA		1.86 M	1,488 K	none	none	y

Additional comments: * WPNSTA Charleston has three 5,000 gallon tanker trucks & one 7,000 gallon tanker truck to collect waste and transport to disposal.

Data Source: WPNSTA Public Works drawings, contract documents.

12. Berthing Capability, continued

12.7 For each pier and wharf listed above, state today's normal loading by ship class with current facility ship loading, the maximum berthing, maximum berthing for weapons handling evolutions, and maximum berthing to conduct maintenance. For ordnance handling capability, identify the maximum number of ships that can be moored at each pier or wharf to conduct ordnance handling evolutions, without necessitating berth shifts. Incorporate all applicable safety, ESQD, and access limitations. Include comments below the Table if necessary. For berthing in support of maintenance, list the maximum number of ships that can be serviced in maintenance availabilities at each pier or wharf without necessitating berth shifts to accommodate crane, laydown or access limitations. Provide any additional comments in the space following the Table.

Table 12.7: Pier and Wharf Normal Loading

CR

Pier or Wharf	Typical Steady State Loading	Maximum Ship Berthing	Ordnance Handling Pierside?	Perform Maintenance Pierside?
Wharf A	See Note 1	2	2	2*
Pier B	See Note 1	2	2	2*
Transportation Corps (TC) Dock	See Note 2	2	No	2*

Note 1: Either facility may berth any combination of AE's, Combatants, or Submarines when that combination does not exceed the N.E.W. reported on Table 12.1 for that berth. Wharf A and the TC Dock support RORO ships.

CR +

Note 2: TC Dock is used to load general cargo, mechanized equipment, POV's for service members stationed over seas, and other non-explosive cargo. Handles RORO ships.

* Maintenance may be performed at all piers and wharfs; however, maintenance operations are restricted at sites when ordnance loading is being performed. Pier B can support cold iron maintenance evolutions.

12. Berthing Capability, continued

12.8 How much pier space is required to berth and support ancillary craft (tugs, barges, floating cranes, etc.) currently at your facility? Indicate if certain piers are uniquely suited to support these craft.

Capability exists to berth and support tugs, barges, and floating cranes at finger piers and dolphins adjacent to the Transportation Dock. Berthing these units would not impact any explosive out-load operations.

(R

12.9 What is the average pier loading in ships per day due to visiting ships at your facility/piers or wharves under your cognizance? Indicate if this varies significantly by season.

One per day. No seasonal variance.

12.10 Given no funding or manning limits, what modifications or improvements would you make to the waterfront infrastructure to increase the cold iron ship berthing capability of your installation/under your cognizance. Provide a description, cost estimates, and additional capability gained.

Cold iron ship berthing currently available at Piers B and C. Installation of a steam system on Wharf A would increase cold iron capability by two ships, at an estimated cost of \$595,000.

Another infrastructure investment to increase our activity's cold iron berthing capability is to replace Pier C with a Drive On/Drive Off Wharf which would permit a total of two ships to be serviced simultaneously. Actual cost and payback information is unknown.

(R +

12.11 Describe any unique limits or enhancements on the berthing of ships at specific piers or wharves under your cognizance.

No known limitations have been identified.

Features and Capabilities, continued

R

13. Physical Space for Industrial Support

13.1 Identify in the table below the real estate resources which have the potential to facilitate future development and for which you are the plant account holder or into which, though a tenant, your activity could reasonably expect to expand. Complete a separate table for each individual site, i.e., main base, outlying airfields, special off-site areas, etc. The unit of measure is acres. Developed area is defined as land currently with buildings, roads, and utilities where further development is not possible without demolition of existing improvements. Include in "Restricted" areas that are restricted for future development due to environmental constraints (e.g. wetlands, landfills, archaeological sites), operational restrictions (e.g. ESQD arcs, HERO, HERP, HERF, AICUZ, ranges) or cultural resources restrictions. Identify the reason for the restriction when providing the acreage in the table. Specify any entry in "Other" (e.g. submerged lands).

Table 13.1: Real Estate Resources

Site Location: WPNSTA Charleston

Land Use	Total Acres	Developed Acreage	Available for Development	
			Restricted	Unrestricted

14. Facility Measures

14.1 Identify the facility and equipment values for all activities under your cognizance in the Table below, as executed and budgeted for the period requested. As applied herein:

- Maintenance of Real Property (MRP) is the budgetary term gathering the expenses or budget requirements for facility work and includes recurring maintenance, major repairs and minor construction (non-MILCON) inclusive of all Major Claimant funded Special Projects. It is the amount of funds spent on or budgeted for maintenance and repair of real property assets to maintain the facility in satisfactory operating condition. For purposes of this Data Call, MRP includes all M1/R1 and M2/R2 expenditures.
- Current Plant Value (CPV) refer to incorporates Class 2 Real Property and is the hypothetical dollar amount required to replace a Class 2 facility in kind at today's dollars (e.g.: the cost today to replace an existing wood frame barracks with another barracks, also wood frame).
- Acquisition Cost of Equipment (ACE) reports the total cumulative acquisition cost of all "Personal Property" equipment which includes the cost of installed equipments directly related to mission execution (such as lab test equipment). Class 2 installed capital equipment which is integral to the facility should not be reported as ACE.

16. Training Facilities

16.1. By Category Code Number (CCN) (5 digits), complete the following student throughput capacity table for all training facilities (adequate, substandard and inadequate) aboard the installation, including tenant activities. Include all 171-XX and 179-XX CCNs and any other applicable CCN. Following the table, describe how the reported Student Hours/Year capacity was derived. Personnel Capacity (PN) is the total number of seats available for students in spaces used instruction, based on the current configuration and use of the facilities.

EX: A type of training facility in the category 171-10 is an academic instruction classroom. If you have 10 classrooms with a capacity of 25 students per room, the design capacity reported would be 250. If these classrooms are available 8 hours a day for 300 days in a year, the capacity would be 600,000 student hours per year.

Table 16.1: Training Facilities

Parent UIC	CCN	Type of Training Facility	Total # this Type	Personnel Capacity (PN)	Capacity (Student Hours/Year)
*	171-10	Academic instruction classroom	23	47	7,833,600

* Nuclear Power Training Unit (NPTU) is a tenant located on WPNSTA Charleston. UIC's are: 47723, 47724, 47785, 47801, 49230, and 68898.

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 25

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

E A revision to the capacity section page 74 has been made.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

DATA CALL SUPPLEMENT FOR JOINT CROSS SERVICE GROUP-DEPOT MAINTENANCE

This supplement is designed to facilitate the cross service analysis required of the 1995 Base Realignment and Closure (BRAC-95) process. It requests data in a standardized format that will be used by the Joint Cross Service Group-Depot Maintenance (JCSG-DM) to develop closure and realignment alternatives to be given to the Military Departments for their analysis and final recommendations. The JCSG-DM Data Call consists of two sections, one for capacity measurements and a second measuring "measures of merit". This Data Call has been formatted to assist the preparer in providing the required information with the minimum amount of effort. If questions arise, contact your Military Department BRAC-95 office for clarification.

Notes in the context of this data call:

1. Base your responses on workload as programmed for your activity. Unless otherwise specified, use workload mixes as programmed in the FYDP.
2. Direct Labor Hours (DLH) is the common unit of measure unless specifically noted otherwise in the question.
3. Information requested in this supplement may duplicate data requested by BRAC 95 data calls from the individual Military Departments. If this occurs, read both questions carefully to ensure that they are in fact asking for identical information, and if that is the case, transfer information from one data call to the other.
4. These questions should be passed up and down the chain of command without editing or rewriting. This standardized data call is designed to support an auditable process by having each activity (regardless of Military Department assigned) respond to the same question.
5. "Core" capability calculations are to be performed in accordance with Office of the Under Secretary of Defense (Logistics) Memorandum dated November 15, 1993 (Subject: Policy for Maintaining Core Depot Maintenance Capability).
6. Capacity and utilization index calculations will be performed in accordance with the Defense Depot Maintenance Council approved update to DoD 4151.15H (Depot Maintenance Capacity/Utilization Index Measurement) dated December 5, 1990.
7. All calculations will assume a one shift, 40 hour work week.
8. Workload, capabilities, and capacities will be measured by commodity groups. A detailed breakout of the JCSG-DM commodity groups is contained in the following box. Insert the commodity groups applicable to your depot maintenance activity into the tables whenever a specific break out is requested by the question. Individual Military Departments in their Service specific data calls, may measure data in different commodity groups or categories, but for the Joint Cross Service analysis, these commodity groups must be utilized.
9. Data will be amounts as of the end of the applicable fiscal year.

Commodity Groups List

NAVAL WEAPONS STATION CHARLESTON (LIC 00193) - BRAC 95 - DATA CALL 25 (DEPOT MAINTENANCE)

1. Aircraft Airframes:
 - a. Rotary
 - b. VSTOL
 - c. Fixed Wing
 - (1) Transport / Tanker / Bomber /
 - (2) Command and Control
 - (3) Light Combat
 - (4) Admin / Training
 - d. Other
2. Aircraft Components
 - Dynamic Components
 - Aircraft Structures
 - Hydraulic/Pneumatic
 - Instruments
 - Landing Gear
 - Aviation Ordnance
 - Avionics/Electronics
 - APUs
 - Other
3. Engines (Gas Turbine)
 - Aircraft
 - Ship
 - Tank
 - Blades / Vanes (Type 2)
4. Missiles and Missile Components
 - Strategic
 - Tactical / MLRS
5. Amphibians
 - Vehicles
 - Components (less GTE)
6. Ground Combat Vehicles
 - Self-propelled
 - Tanks
 - Towed Combat Vehicles
 - Components (less GTE)
7. Ground and Shipboard Communications and Electronic Equipment
 - Radar
 - Radio Communications
 - Wire Communications
 - Electronic Warfare
 - Navigational Aids
 - Electro-Optics / Night Vision
 - Satellite Control / Space Sensors
8. Automotive / Construction Equipment
9. Tactical Vehicles
 - Tactical Automotive Vehicles
 - Components
10. Ground General Purpose Items
 - Ground Support Equipment (except aircraft)
 - Small Arms / Personal Weapons
 - Munitions / Ordnance
 - Ground Generators
 - Other

FOR
JOINT CROSS SERVICE GROUP - DEPOT MAINTENANCE**

CAPACITY

1. Capacity Utilization

1.1 Calculate the capacity index for the commodity groups applicable to depot maintenance work at your activity. Provide your answers expressed in direct labor hours (DLHs) in Table 1.1.a by commodity groups for the Fiscal Years requested.

Table 1.1.a: Capacity Index

COMMODITY GROUP	INDEX (DLHs)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	24,000	24,000	24,000	24,000	24,000
MUNITIONS/ ORDNANCE	2,000	2,000	2,000	2,000	2,000
TOTAL	26,000	26,000	26,000	26,000	26,000

OTHER (INERT): Workload includes depot level maintenance of MK46, MK48, and Surface Launched Missile System containers, and MK48 Torpedo Mounted Dispensers. Additionally, work includes depot level maintenance of MILVAN containers in support of the US Marines and US Army's Strategic Mobility Logistics Base (SMLB) Program.

MUNITIONS/ORDNANCE: Workload includes renovation of conventional ammunition.

1. Capacity Utilization, continued

Revised pg

1.2 Calculate the utilization index for the commodity groups applicable to depot maintenance work at your activity. Provide your answers expressed as a percentage (%) in Table 1.2.a by commodity groups for the Fiscal Years requested.

Table 1.2.a: Utilization Index

COMMODITY GROUP	INDEX (%)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	89	88	87	87	87
MUNITIONS/ ORDNANCE	90	0	0	0	0
TOTAL	179	88	87	87	87

1.3 Assuming (a) the current projected total workload remains as assigned; (b) that sufficient production demand is available to justify maximum hiring, with no significant investment in capital equipment; and (c) no major Military Construction additional to that already approved and funded: what is the maximum extent to which operations, by commodity group, could be expanded for depot maintenance work at your activity, based on the current and future planned workload mixes? Please provide your response in the absolute maximum number of direct labor hours (DLHs).

Table 1.3.a: Maximum Potential Capacity

COMMODITY GROUP	INDEX (DLHs) (000's)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT)	47.6	47.6	47.6	47.6	47.6
MUNITIONS/ ORDNANCE	2.7	2.7	2.7	2.7	2.7
TOTAL	50.3	50.3	50.3	50.3	50.3

1. Capacity Utilization, continued

1.2 Calculate the utilization index for the commodity groups applicable to depot maintenance work at your activity. Provide your answers expressed as a percentage (%) in Table 1.2.a by commodity groups for the Fiscal Years requested.

Table 1.2.a: Utilization Index

COMMODITY GROUP	INDEX (%)				
	FY 1995	FY 1996	FY 1997	FY 1998	FY 1999

TOTAL	18.7	21.0	20.8	20.8	20.8

CAPACITY

4. Service Centers of Excellence

4.1 If your activity has been designated as a Service Center of Excellence for any of the commodity groups, please identify them below.

NOT APPLICABLE

**DATA CALL SUPPLEMENT
FOR
JOINT CROSS SERVICE GROUP - DEPOT MAINTENANCE**

MEASURES OF MERIT

Geographic

1. Location

1.1 Specify any special strategic importance or military value consideration of your activity accruing from its geographical location.

- **WPNSTA Charleston is a warm water, explosive loading port facility.**
- **WPNSTA Charleston has a Coast Guard approved 8,000 foot diameter off-shore explosive anchorage (NEW 1.0M) to support peak load and surge capacity staging of explosive laden vessels.**
- **Sizable land area allows collocation of large ordnance storage and maintenance capacity with ship explosive outloading capability.**
- **Large land mass cited for explosive operations with established ESQD arcs which all fall within the geographic boundaries of WPNSTA Charleston.**
- **Encroachment on the established boundaries and ESQD arcs of the WPNSTA are insulated by wetlands, restricted waterways, and roads.**
- **It is the only coastal activity with explosive storage, outload, and maintenance capability in the southeastern United States.**
- **This capability supports Navy, Marine Corps, and Army explosive operations.**
- **The Weapons Station geographical site meets support requirements for the Nuclear Power Training Facility (NPTU).**
- **WPNSTA Charleston will upon, Naval Station Charleston closure, support the Mobile Mine Assembly Group (MOMAG) mission which is geographically linked to mine range off the Charleston, SC coast.**
- **It is the closest explosive loading port to the homeported ships located in GA, FL, and the Gulf of Mexico.**
- **WPNSTA Charleston's close proximity to the Charleston Air Force Base provides quick-trans support service for shipment of materials using the Military Air Transport.**

Geographic, continued

2. Environmental Compliance

Answers to the following questions need to reflect the particular workloads or processes affected by the environmental restrictions/compliance.

2.1 Is your activity in full compliance with all Federal, state, and local environmental regulations? If not in full compliance, provide a comprehensive list of individual regulations that require actions to be taken. What compliance waivers have been granted? When must the activity come into compliance?

Type Regulation Waiver (Date Expires) Date Must be in Compliance

We are in full compliance based upon the status of the latest inspections by federal, state, and local regulators.

2.2 Has any actual or programmed work at this installation been restricted or delayed because of environmental considerations, such as air or water quality? If so, provide the details of the impact of the restrictions or delays.

Programmed Work Restriction/Delay Describe Impact

No actual or programmed work has been restricted or delayed beyond the normal amount of time required to incorporate environmental impacts/requirements into the work.

Geographic, continued

3. Environmental Restrictions

Answers to the following questions need to reflect the particular workloads or processes affected by the environmental restrictions/compliance.

3.1 Are there any special programs relating to environmental or industrial waste considerations for your activity? If so, provide the details.

<u>Special Program</u>	<u>Environmental/Industrial Waste</u>	<u>Describe</u>
------------------------	---------------------------------------	-----------------

None

3.2 Within what provisions must the activity operate with regard to disposal of hazardous wastes and radioactive materials?

<u>Type</u>	<u>Provisions</u>	<u>Describe</u>
Federal	40CFR260-280	Hazardous waste management
State	R.61-79,260-280	Hazardous waste management

No radioactive waste generation and disposal at WPNSTA Charleston.

Geographic, continued

4. Other Collocated Activities

4.1 Are there any collocated activities that directly benefit or relate to the depot maintenance activity? If yes, list and describe the impact of each. Include benefits derived from being collocated.

<u>Collocated Activity</u>	<u>Benefit/Relationship</u>	<u>Describe Impact</u>
----------------------------	-----------------------------	------------------------

US Army's Strategic Mobility Logistics Base (SMLB) Program	Depot level maintenance to MILVANS	
---	---	--

4.2 Do collocated activities support, or are they supported by, the depot maintenance activity?

<u>Collocated Activity</u>	<u>Describe Relationship</u>
----------------------------	------------------------------

The Army program is supported by WPNSTA Charleston.

4.3 How would these activities and the depot maintenance activity function if they were not collocated?

<u>Collocated Activity</u>	<u>Describe Impact if not Collocated</u>
----------------------------	--

The DLM could be performed elsewhere; however, collocation with explosive storage capability and explosive outload facilities provides strategic and operation enhancements. Performance of depot level MILVAN repair at WPNSTA Charleston where the prepositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

Geographic, continued

5. Encroachment

5.1 Have operations at this activity been at all constrained to accommodate requests of the local communities?

<u>Type of Encroachment</u>	<u>Operation Impacted</u>	<u>Describe</u>
-----------------------------	---------------------------	-----------------

There have been no known requests from local communities. No operations have been restricted.

5.2 Indicate any encroachment constraints on current or future operations that would restrict future expansion.

<u>Type of Encroachment</u>	<u>Constraint on Expansion</u>	<u>Describe</u>
-----------------------------	--------------------------------	-----------------

No encroachment constraints restrict future expansion.

MEASURES OF MERIT

Facilities and Equipage

6. Unique or Peculiar Facilities

6.1 List unique or peculiar facilities, excluding equipment (e.g. runways, railheads, ports, tracks, ponds, etc.).

Facility Describe Uniqueness/Peculiarity

Wharf A - NEW limit of 1.0 million pounds.

Pier B - NEW limit of 1.95 million pounds.

Pier C - NEW limit of 1.5 million pounds.

TC Dock - NEW limit of 1,371 pounds, fuel/defuel capability.

Open/Burn Open/Detonation Range - Approved Class C disposal site.

Stationary Demilitarization Furnace - Approved non-RCRA material disposal site.

Explosive Storage and Maintenance Facilities - Established ESQD arcs are on Government property.

WPNSTA Charleston has a Coast Guard approved 8,000 foot diameter off-shore explosive anchorage (NEW 1.0M) to support peak load and surge capacity staging of explosive laden vessels.

6.2 Indicate the reasons that these facilities are required by the depot maintenance function.

Facility Reasons Required for Maintenance

The DLM supports the prepositioning programs operated by the US Army and US Marines at WPNSTA Charleston. These programs require the handling and storage of ordnance commodities and renovation of ammunition containers. Established ESQD arcs, sited explosive storage, maintenance, and production facilities provide this support.

6.3 How could the depot maintenance functions be performed without these specialized facilities?

Facility Describe Testing Alternatives

The DLM could be performed elsewhere; however, collocation with explosive storage capability and explosive outload facilities provides strategic and operation enhancements. Performance of depot level MIL-VAN repair at WPNSTA Charleston where the prepositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

Facilities and Equipage, continued

7. Buildings and Their Condition

7.1 List the buildings used to perform the depot maintenance functions by category code numbers (five or six digit CCNs), identifying their current condition (adequate, substandard, and inadequate) in Table 7.1 in thousands of square feet (KSF).

Table 7.1: Facility Conditions

CCN	Facility Type	Condition / Area (# KSF)			Comments
		Adequate	Substandard	Inadequate	
216-10	CONVENTIONAL AMMO B-419	11.0	0	0	
216-40	MPF MILVAN DLM B- 58	8.3	0	0	
218-10	MK46/48 DLM B-65	10.0	0	0	
421-32	SMS DLM B-75	6.5	0	0	
421-32	SMS DLM B-296	7.5	0	0	
229-80	MK46,48, & SMS DLM B-74	10.3	0	0	
215-50	MK48 TMD DLM B-93	16.6	0	0	
	TOTAL	70.2	0	0	

Facilities and Equipage, continued

7.2 In Table 7.2.a, identify space available for expansion by building type for those facility category code numbers (five or six digit CCNs) that are most important to your mission. An activity's expansion capability is a function of its ability to reconfigure/rehabilitate existing underutilized facilities to accept new or increased requirements.

Table 7.2.a: Space Available for Expansion

Building ID / Type	CCN	Installation Space (KSF)			Total
		Adequate	Substandard	Inadequate	
MAINT/TEST B-930	216-40	31.5	0	0	31.5
MAINT/TEST B-79	216-40	10.3	0	0	10.3
MAINT/TEST B-92	212-10	33.8	0	0	33.8
TOTAL:		75.6	0	0	75.6

Facilities and Equipage, continued

8. Unique and/or Peculiar Capabilities and Capacities

8.1 What unique and/or peculiar capabilities and capacities does the depot maintenance activity possess?

Depot Maintenance Capability/Capacity

Describe Why Unique/Peculiar

DLM for ammunition MIL-VANS

Single authorized and certified east coast DLM repair facility for ammunition containers.

8.2 Separately list the depot maintenance facilities and equipment which are one of a kind within the Service and/or DoD.

Facility/Equipment

Describe Why It is One of a Kind

None

Facilities and Equipage, continued

9. Acreage Available for Building

9.1 What acreage on the installation does the government own in the proximity of the depot maintenance area that could be used for future expansion? Identify in the table below the real estate resources which have the potential to facilitate future development and for which you are the plant account holder or into which, though a tenant, your activity could reasonably expect to expand. Developed area is defined as land currently with buildings, roads, and utilities where further development is not possible without demolition of existing improvements. Report in "Restricted" areas that are restricted for future development due to environmental constraints (e.g. wetlands, landfills, archaeological sites), operational restrictions (e.g. ESQD arcs, HERO, HERP, HERF, AICUZ, ranges) or cultural resources restrictions. Identify the reason for the restriction when providing the acreage.

Table 9.1: Real Estate Resources

Site Location: WPNSTA Charleston

Land Use	Total Acres	Developed Acreage	Available for Development	
			Restricted	Unrestricted
Maintenance	0	N/A	N/A	N/A
Operational	9,905	8,419	1,486	0
Training	12	12	0	0
R & D	0	N/A	N/A	N/A
Supply & Storage	4	4	0	0
Admin	153	153	0	0
Housing	540	540	0	0
Recreational	1,393	N/A	N/A	N/A
Navy Forestry Program	9,498	N/A	2,437	4,615
Navy Agricultural Outlease Program	0	N/A	N/A	N/A
Hunting/Fishing Programs	*	N/A	N/A	N/A
Other	0	N/A	N/A	N/A
Total:	21,505 **	9,128	3,923	4,615

* Acreage varies depending on operational constraints and seasons.

** Actual total WPNSTA Charleston acres is 17,221. Navy Forestry Program overlaps with other land use categories.

Data Source: WPNSTA general development maps dtd 16 Sep 90 & WPNSTA Master Plan dtd Oct 88

Facilities and Equipage, continued

10. Administrative Space

10.1 What amount in square feet of administrative space could be made available to the depot maintenance function?

<u>Current Use</u>	<u>Square Feet</u>	<u>Potential Use (Be Specific)</u>
--------------------	--------------------	------------------------------------

None

11. Industrial Waste

11.1 Are there any inhibiting factors that would limit future expansion on the base? Provide details if applicable.

<u>Inhibiting Factor</u>	<u>Provide Detailed Description</u>
--------------------------	-------------------------------------

Facilities and equipage to support Industrial Waste is sufficient for current and future expansion. Local Publicly Owned Treatment Works can easily accept increased waste volumes. Any additional on station treatment/pretreatment facilities required could be easily obtained. Local disposal capacity for solid industrial waste (i.e. paint wastes, asbestos waste, abrasive blast waste, petroleum contaminated soil/solids) is sufficient to support current needs and any future expansions. Sufficient current and future expansion capacity exists for industrial waste recycling needs (i.e. batteries, scrap metal, etc.)

MEASURES OF MERIT

COMMODITY GROUP	Workload (DLHs) (000's)			
	FY 1996	FY 1997	FY 1998	FY 1999
OTHER (INERT) MARINE MPF	7.8	7.8	7.8	7.8
OTHER (INERT) ARMY PREPO	4.5	4.5	4.5	4.5
TOTAL	12.3	12.3	12.3	12.3

15.2 What amount of the workload reported in question 8.1 is non-Core? Provide your answer in table 15.2 by commodity group for the Fiscal Years requested.

None applicable - Table 15.2

Workload and Capabilities, continued

16. Scope of Work Performed

16.1 Indicate the services/functions performed at this activity that are associated with depot maintenance, but not generally classified or considered as integral to the depot maintenance functions.

<u>Service/Function</u>	<u>Description</u>
Explosive Ordnance handling, storage, and outload operations.	<p>Wharf A - NEW limit of 1.0 million pounds. Pier B - NEW limit of 1.95 million pounds. Pier C - NEW limit of 1.5 million pounds. TC Dock - NEW limit of 1,371 pounds, fuel/defuel capability. Open/Burn Open/Detonation Range - Approved Class C disposal site. Stationary Demilitarization Furnace - Approved non-RCRA material disposal site. Explosive Storage and Maintenance Facilities - Established ESQD arcs are on Government property. WPNSTA Charleston has a Coast Guard approved 8,000 foot diameter off-shore explosive anchorage (NEW 1.0 M) to support peak load and surge capacity staging of explosive laden vessels.</p>

16.2 Describe how these services/functions are related to accomplishment of the depot maintenance mission, and the benefits of these relationships.

<u>Service/Function</u>	<u>Describe Relationship and Benefit to Maintenance Mission</u>
-------------------------	---

These services provide essential capabilities for the prepositioning programs operated by the US Army and US Marines at WPNSTA Charleston. These programs require the handling and storage of ordnance commodities, the renovation of ammunition containers, and the outload of explosive laden MILVANS as well as general cargo loads. Established ESQD arcs, cited explosive storage, maintenance and production facilities, and explosive handling piers and Wharfs provide this support.

Workload and Capabilities, continued

17. Interface with Customers

17.1 Indicate any special functions that the depot maintenance function performs that require close interface with customers, such as on-site workloads (e.g. technical assistance, crash/battle damage repairs, modification/upgrade installations).

Service/Function Describe Required Interface/Relationship/Benefit

Performance of depot level MIL-VAN repair at WPNSTA Charleston where the repositioning operations for Marine and Army are conducted, allows immediate response to customer requirements for assets. Costs associated with establishing a ready reserve pool of serviceable containers and/or transportation of serviceable units from another site are eliminated. Containers are repaired and returned to serviceable condition within the normal ship maintenance cycle.

MEASURES OF MERIT

Costs ¹⁶

18. Real Property Maintenance (RPM)

18.1 What is your activity's backlog of real property maintenance for facilities performing depot maintenance as of 30 September 1993 (express in \$K)?

None

18.2 What were your activity's annual RPM expenses (in \$K) for Fiscal Years 1990-1993? Provide your answers in Table 18.2.

Table 18.2: Real Property Maintenance Expenses

	FY 1990	FY 1991	FY 1992	FY 1993
RPM Expenses (\$K)	163.8	172.5	181.5	191.0

19. Annual Operating Costs (Excludes Materials used in Depot Maintenance Workloads)

19.1 What were the total depot maintenance actual annual operating costs for your activity (AOC/\$K), excluding materials, used in depot maintenance workloads for Fiscal Years 1990-1993? What was the cost per direct labor hour (\$DLH) for actual executed hours reported in the DBOF? Provide your answers in Table 19.1.a.

Table 19.1: Annual Operating Costs

EXPENSE	FY 1990	FY 1991	FY 1992	FY 1993
AOC (\$ K)	1,287	973	779	1,006
\$ / DLH	44.10	48.49	52.48	78.87

¹⁶ There are inherent differences in organizational structure and accounting systems across the Services. Consequently, cost accumulations vary considerably. This severely limits the comparability of the cost per direct labor hour (\$/DLH) rates across Service lines.

Costs, continued

20. Environmental Compliance

20.1 What were your total depot maintenance actual and programmed environmental compliance costs (expressed in \$K) for Fiscal Years 1990-1997? Provide your answers in Table 20.1.

Table 20.1: Environmental Compliance Costs

COST(\$K)	FY 1990	FY 1991	FY 1992	FY 1993	FY* 1994	FY 1995	FY 1996	FY 1997
Actual	**	26	28	21	5	N/A	N/A	N/A
Programmed	**	28	29	26	20	18	17	15

* FY 94 is as of 4-30-94

** Unknown or data unavailable.

20.2 If spending is accomplished as programmed above, what will be the remaining costs (backlog at the end of Fiscal Year 1997 expressed in \$K) to bring existing facilities/equipment into environmental compliance?

N/A Not Applicable

21. Local Wage Rate

21.1 What were your Department of Labor local wage rates for a WG-11, step 3 for Fiscal Years 1991 through 1994?

Table 21.1: Wage Rate

Wage Rate	FY 1991	FY 1992	FY 1993	FY 1994
WG-11 / Step3	\$13.73 ph	\$14.20 ph	14.46 ph	\$14.77 ph

Costs, continued

22. Programmed Capital Investments

22.1 How much is programmed for new mission equipment for Fiscal Years 1996 through 1999? Provide your answer (in \$K) in Table 22.1.

22.2 How much is programmed for replacement equipment for Fiscal Years 1996 through 1999? Provide your answer (in \$K) in Table 22.1.

Table 22.1: Programmed Capital Investments

TYPE	FY 1996	FY 1997	FY 1998	FY 1999
NEW MISSION (\$K)	0	0	0	0
REPLACEMENT (\$K)	0	0	0	0

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 25

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

Revisions to the capacity section have been made to the following pages: 3-6, 19, 24, 30-33, 35, 39, 41-44, 65, 81, 83, and 84.

Revisions to the DLM section have been made to the following pages: 6, 21, and 22.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

**DATA CALL 66
INSTALLATION RESOURCES**

Activity Information:

Activity Name:	NAVAL WEAPONS STATION, CHARLESTON, SC
UIC:	00193
Host Activity Name (if response is for a tenant activity):	
Host Activity UIC:	

General Instructions/Background. A separate response to this data call must be completed for each Department of the Navy (DON) host, independent and tenant activity which separately budgets BOS costs (regardless of appropriation), and, is located in the United States, its territories or possessions.

1. Base Operating Support (BOS) Cost Data. Data is required which captures the total annual cost of operating and maintaining Department of the Navy (DON) shore installations. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Two tables are provided. Table 1A identifies "Other than DBOF Overhead" BOS costs and Table 1B identifies "DBOF Overhead" BOS costs. These tables must be completed, as appropriate, for all DON host, independent or tenant activities which separately budget BOS costs (regardless of appropriation), and, are located in the United States, its territories or possessions. Responses for DBOF activities may need to include both Table 1A and 1B to ensure that all BOS costs, including those incurred by the activity in support of tenants, are identified. If both table 1A and 1B are submitted for a single DON activity, please ensure that no data is double counted (that is, included on both Table 1A and 1B). The following tables are designed to collect all BOS costs currently budgeted, regardless of appropriation, e.g., Operations and Maintenance, Research and Development, Military Personnel, etc. Data must reflect FY 1996 and should be reported in thousands of dollars.

a. Table 1A - Base Operating Support Costs (Other Than DBOF Overhead). This Table should be completed to identify "Other Than DBOF Overhead" Costs. Display, in the format shown on the table, the O&M, R&D and MPN resources currently budgeted for BOS services. O&M cost data must be consistent with data provided on the BS-1 exhibit. Report only direct funding for the activity. Host activities should not include reimbursable support provided to tenants, since tenants will be separately reporting these

**DATA CALL 66
INSTALLATION RESOURCES**

costs. Military personnel costs should be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Add additional lines to the table (following line 2j., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

Table 1A - Base Operating Support Costs (Other Than DBOF Overhead)			
Activity Name: NAVAL WEAPONS STATION, CHARLESTON, SC		UIC: 00193

**DATA CALL 66
INSTALLATION RESOURCES**

b. Funding Source. If data shown on Table 1A reflects more than one appropriation, then please provide a break out of the total shown for the "3. Grand-Total" line, by appropriation:

<u>Appropriation</u>	<u>Amount (\$000)</u>
----------------------	-----------------------

c. Table 1B - Base Operating Support Costs (DBOF Overhead).

This Table should be submitted for all current DBOF activities. Costs reported should reflect BOS costs supporting the DBOF activity itself (usually included in the G&A cost of the activity). For DBOF activities which are tenants on another installation, total cost of BOS incurred by the tenant activity for itself should be shown on this table. It is recognized that differences exist among DBOF activity groups regarding the costing of base operating support: some groups reflect all such costs only in general and administrative (G&A), while others spread them between G&A and production overhead. Regardless of the costing process, all such costs should be included on Table 1B. The Minor Construction portion of the FY 1996 capital budget should be included on the appropriate line. Military personnel costs (at civilian equivalency rates) should also be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Also ensure that there is no duplication between data provided on Table 1A. and 1B. These two tables must be mutually exclusive, since in those cases where both tables are submitted for an activity, the two tables will be added together to estimate total BOS costs at the activity. Add additional lines to the table (following line 21., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

Other Notes: All costs of operating the five Major Range Test Facility Bases at DBOF activities (even if direct RDT&E funded) should be included on Table 1B. Weapon Stations should include underutilized plant capacity costs as a DBOF overhead "BOS expense" on Table 1B..

4. Grand Total (sum of 1c., 2m., and 3.):	5381	4216	9597

Note: The non-labor cost for items 2h, 2i, and 2l are negative due to Public Works converting to a production cost center in FY95.

**DATA CALL 66
INSTALLATION RESOURCES**

2. Services/Supplies Cost Data. The purpose of Table 2 is to provide information about projected FY 1996 costs for the purchase of services and supplies by the activity. (Note: Unlike Question 1 and Tables 1A and 1B, above, this question is not limited to overhead costs.) The source for this information, where possible, should be either the NAVCOMPT OP-32 Budget Exhibit for O&M activities or the NAVCOMPT UC/FUND-1/IF-4 exhibit for DBOF activities. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Break out cost data by the major sub-headings identified on the OP-32 or UC/FUND-1/IF-4 exhibit, disregarding the sub-headings on the exhibit which apply to civilian and military salary costs and depreciation. Please note that while the OP-32 exhibit aggregates information by budget activity, this data call requests OP-32 data for the activity responding to the data call. Refer to NAVCOMPTINST 7102.2B of 23 April 1990, Subj: Guidance for the Preparation, Submission and Review of the Department of the Navy (DON) Budget Estimates (DON Budget Guidance Manual) with Changes 1 and 2 for more information on categories of costs identified. Any rows that do not apply to your activity may be left blank. However, totals reported should reflect all costs, exclusive of salary and depreciation.

BRAC-95 CERTIFICATION

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

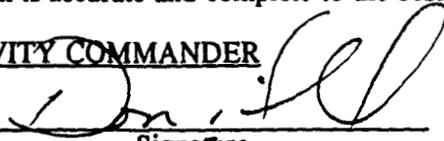

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

**BRAC DATA CALL NUMBER 64
CONSTRUCTION COST AVOIDANCE**

Information on cost avoidance which could be realized as the result of cancellation of on-going or programmed construction projects is provided in Tables 1 (MILCON) and 2 (FAMILY HOUSING). These tables list MILCON/FAMILY HOUSING projects which fall within the following categories:

1. all programmed construction projects included in the FY1996 - 2001 MILCON/FAMILY HOUSING Project List,
2. all programmed projects from FY1995 or earlier for which cost avoidance could still be obtained if the project were to be canceled by 1 OCT 1995, and,
3. all programmed BRAC MILCON/FAMILY HOUSING projects for which cost avoidance could still be obtained if the project were to be canceled by 1 OCT 1995.

Projects listed in Tables 1 and 2 with potential cost avoidance were determined as meeting any one of the following criteria:

Projects with projected Work in Place (WIP) less than 75% of the Current Working Estimate (CWE) as of 1 OCT 1995 .

Projects with projected completion dates or Beneficial Occupancy Dates subsequent to 31 March 1996.

Projects with projected CWE amount greater than \$15M.

The estimated cost avoidance for projects terminated after construction award would be approximately one-half of the CWE for the remaining work. Close-out, claims and other termination costs can consume the other half.

DATA CALL 66
INSTALLATION RESOURCES

UIC: 43350

Activity Information:

Activity Name:	PERSUPPDET WPNSTA Charleston
UIC:	43350
Host Activity Name (if response is for a tenant activity):	Naval Weapons Station, Charleston
Host Activity UIC:	00193

General Instructions/Background. A separate response to this data call must be completed for each Department of the Navy (DON) host, independent and tenant activity which separately budgets BOS costs (regardless of appropriation), and, is located in the United States, its territories or possessions.

1. Base Operating Support (BOS) Cost Data. Data is required which captures the total annual cost of operating and maintaining Department of the Navy (DON) shore installations. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Two tables are provided. Table 1A identifies "Other than DBOF Overhead" BOS costs and Table 1B identifies "DBOF Overhead" BOS costs. These tables must be completed, as appropriate, for all DON host, independent or tenant activities which separately budget BOS costs (regardless of appropriation), and, are located in the United States, its territories or possessions. Responses for DBOF activities may need to include both Table 1A and 1B to ensure that all BOS costs, including those incurred by the activity in support of tenants, are identified. If both table 1A and 1B are submitted for a single DON activity, please ensure that no data is double counted (that is, included on both Table 1A and 1B). The following tables are designed to collect all BOS costs currently budgeted, regardless of appropriation, e.g., Operations and Maintenance, Research and Development, Military Personnel, etc. Data must reflect FY 1996 and should be reported in thousands of dollars.

a. Table 1A - Base Operating Support Costs (Other Than DBOF Overhead).

This Table should be completed to identify "Other Than DBOF Overhead" Costs. Display, in the format shown on the table, the O&M, R&D and MPN resources currently budgeted for BOS services. O&M cost data must be consistent with data provided on the BS-1 exhibit. Report only direct funding for the activity. Host activities should not include reimbursable support provided to tenants, since tenants will be separately reporting these costs. Military personnel costs should be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Add additional

DATA CALL 66
INSTALLATION RESOURCES

UIC: 43350

lines to the table (following line 2j., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

Table 1A - Base Operating Support Costs (Other Than DBOF Overhead)			
Activity Name: PERSUPPET WPNSTA Charleston		UIC: 43350	
Category	FY 1996 BOS Costs (\$000)		
	Non-Labor	Labor	Total
1. Real Property Maintenance Costs:			
1a. Maintenance and Repair			
1b. Minor Construction			
1c. Sub-total 1a. and 1b.			
2. Other Base Operating Support Costs:			
2a. Utilities			
2b. Transportation			
2c. Environmental			
2d. Facility Leases			
2e. Morale, Welfare & Recreation			
2f. Bachelor Quarters			
2g. Child Care Centers			
2h. Family Service Centers			
2i. Administration	88	612	700
2j. Other (Specify) ¹	22	375	397
2k. Sub-total 2a. through 2j:	110	987	1097
3. Grand Total (sum of 1c. and 2k.):	110	987	1097

¹Other Base Support

DATA CALL 66

UIC: 43350

b. **Funding Source.** If data shown on Table 1A reflects more than one appropriation, then please provide a break out of the total shown for the "3. Grand-Total" line, by appropriation:

<u>Appropriation</u>	<u>Amount (\$000)</u>
O&MN	356
MPN	551
RPN	190

c. **Table 1B - Base Operating Support Costs (DBOF Overhead).** This Table should be submitted for all current DBOF activities. Costs reported should reflect BOS costs supporting the DBOF activity itself (usually included in the G&A cost of the activity). For DBOF activities which are tenants on another installation, total cost of BOS incurred by the tenant activity for itself should be shown on this table. It is recognized that differences exist among DBOF activity groups regarding the costing of base operating support: some groups reflect all such costs only in general and administrative (G&A), while others spread them between G&A and production overhead. Regardless of the costing process, all such costs should be included on Table 1B. The Minor Construction portion of the FY 1996 capital budget should be included on the appropriate line. Military personnel costs (at civilian equivalency rates) should also be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Also ensure that there is no duplication between data provided on Table 1A. and 1B. These two tables must be mutually exclusive, since in those cases where both tables are submitted for an activity, the two tables will be added together to estimate total BOS costs at the activity. Add additional lines to the table (following line 21., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

Other Notes: All costs of operating the five Major Range Test Facility Bases at DBOF activities (even if direct RDT&E funded) should be included on Table 1B. Weapon Stations should include underutilized plant capacity costs as a DBOF overhead "BOS expense" on Table 1B..

UIC: 43350

2. Services/Supplies Cost Data. The purpose of Table 2 is to provide information about projected FY 1996 costs for the purchase of services and supplies by the activity. (Note: Unlike Question 1 and Tables 1A and 1B, above, this question is not limited to overhead costs.) The source for this information, where possible, should be either the NAVCOMPT OP-32 Budget Exhibit for O&M activities or the NAVCOMPT UC/FUND-1/IF-4 exhibit for DBOF activities. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Break out cost data by the major sub-headings identified on the OP-32 or UC/FUND-1/IF-4 exhibit, disregarding the sub-headings on the exhibit which apply to civilian and military salary costs and depreciation. Please note that while the OP-32 exhibit aggregates information by budget activity, this data call requests OP-32 data for the activity responding to the data call. Refer to NAVCOMPTINST 7102.2B of 23 April 1990, Subj: Guidance for the Preparation, Submission and Review of the Department of the Navy (DON) Budget Estimates (DON Budget Guidance Manual) with Changes 1 and 2 for more information on categories of costs identified. Any rows that do not apply to your activity may be left blank. However, totals reported should reflect all costs, exclusive of salary and depreciation.

Table 2 - Services/Supplies Cost Data	
Activity Name: PERSUPPDET WPNSTA Charleston	UIC: 43350

DATA CALL 66
INSTALLATION RESOURCES

UIC: 43350

3. Contractor Workyears.

a. On-Base Contract Workyear Table. Provide a projected estimate of the number of contract workyears expected to be performed "on base" in support of the installation during FY 1996. Information should represent an annual estimate on a full-time equivalency basis. Several categories of contract support have been identified in the table below. While some of the categories are self-explanatory, please note that the category "mission support" entails management support, labor service and other mission support contracting efforts, e.g., aircraft maintenance, RDT&E support, technical services in support of aircraft and ships, etc.

Table 3 - Contract Workyears	
Activity Name: PERSUPPDET WPNSTA Charleston	UIC: 43350
Contract Type	FY 1996 Estimated Number of Workyears On-Base
Construction:	
Facilities Support:	
Mission Support:	
Procurement:	
Other:*	
Total Workyears:	0

* **Note:** Provide a brief narrative description of the type(s) of contracts, if any, included under the "Other" category.

**DATA CALL 66
INSTALLATION RESOURCES**

UIC: 43350

b. Potential Disposition of On-Base Contract Workyears. If the mission/functions of your activity were relocated to another site, what would be the anticipated disposition of the on-base contract workyears identified in Table 3.?

1) Estimated number of contract workyears which would be transferred to the receiving site (This number should reflect the number of jobs which would in the future be contracted for at the receiving site, not an estimate of the number of people who would move or an indication that work would necessarily be done by the same contractor(s)):

N/A; no contract workyears

2) Estimated number of workyears which would be eliminated:

N/A; no contract workyears

3) Estimated number of contract workyears which would remain in place (i.e., contract would remain in place in current location even if activity were relocated outside of the local area):

N/A; no contract workyears

**DATA CALL 66
INSTALLATION RESOURCES**

UIC: 43350

c. "Off-Base" Contract Workyear Data. Are there any contract workyears located in the local community, but not on-base, which would either be eliminated or relocated if your activity were to be closed or relocated? If so, then provide the following information (ensure that numbers reported below do not double count numbers included in 3.a. and 3.b., above): No.

No. of Additional Contract Workyears Which Would Be Eliminated	General Type of Work Performed on Contract (e.g., engineering support, technical services, etc.)
None	

No. of Additional Contract Workyears Which Would Be Relocated	General Type of Work Performed on Contract (e.g., engineering support, technical services, etc.)
None

BRAC-95 CERTIFICATION

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

Please note that while the OP-32 exhibit aggregates information by budget activity, this data call requests OP-32 data for the activity responding to the data call. Refer to NAVCOMPTINST 7102.2B of 23 April 1990, Subj: Guidance for the Preparation, Submission and Review of the Department of the Navy (DON) Budget Estimates (DON Budget Guidance Manual) with Changes 1 and 2 for more information on categories of costs identified. Any rows that do not apply to your activity may be left blank. However, totals reported should reflect all costs, exclusive of salary and depreciation.

Table 2 - Services/Supplies Cost Data	
Activity Name: MARS District, Charleston, SC	UIC: N41306
Cost Category	FY 1996 Projected Costs (\$000)
Travel:	.9
Material and Supplies (including equipment):

**DATA CALL 66
INSTALLATION RESOURCES**

3. Contractor Workyears.

a. On-Base Contract Workyear Table. Provide a projected estimate of the number of contract workyears expected to be **performed "on base"** in support of the installation during FY 1996. Information should represent an annual estimate on a full-time equivalency basis. Several categories of contract support have been identified in the table below. While some of the categories are self-explanatory, please note that the category "mission support" entails management support, labor service and other mission support contracting efforts, e.g., aircraft maintenance, RDT&E support, technical services in support of aircraft and ships, etc. N/A

Table 3 - Contract Workyears	
Activity Name:	UIC:
Contract Type	FY 1996 Estimated Number of Workyears On-Base
Construction:	
Facilities Support:	
Mission Support:	
Procurement:	
Other:*	
Total Workyears:	

* **Note:** Provide a brief narrative description of the type(s) of contracts, if any, included under the "Other" category.

**DATA CALL 66
INSTALLATION RESOURCES**

b. Potential Disposition of On-Base Contract Workyears. If the mission/functions of your activity were relocated to another site, what would be the anticipated disposition of the on-base contract workyears identified in Table 3.?

1) Estimated number of contract workyears which would be transferred to the receiving site (This number should reflect the number of jobs which would in the future be contracted for at the receiving site, not an estimate of the number of people who would move or an indication that work would necessarily be done by the same contractor(s)):

N/A

2) Estimated number of workyears which would be eliminated:

N/A

3) Estimated number of contract workyears which would remain in place (i.e., contract would remain in place in current location even if activity were relocated outside of the local area):

N/A

**DATA CALL 66
INSTALLATION RESOURCES**

c. "Off-Base" Contract Workyear Data. Are there any contract workyears located in the local community, but not on-base, which would either be eliminated or relocated if your activity were to be closed or relocated? If so, then provide the following information (ensure that numbers reported below do not double count numbers included in 3.a. and 3.b., above):

No. of Additional Contract Workyears Which Would Be Eliminated	General Type of Work Performed on Contract (e.g., engineering support, technical services, etc.)
0	

No. of Additional Contract Workyears Which Would Be Relocated	General Type of Work Performed on Contract (e.g., engineering support, technical services, etc.)
0

**DATA CALL 66
INSTALLATION RESOURCES**

Activity Information:

Activity Name:	Naval Telecommunications Center (NTCC) Charleston
UIC:	N33243
Host Activity Name (if response is for a tenant activity):	Naval Weapons Station, Charleston, SC
Host Activity UIC:	N00193

General Instructions/Background. A separate response to this data call must be completed for each Department of the Navy (DON) host, independent and tenant activity which separately budgets BOS costs (regardless of appropriation), and, is located in the United States, its territories or possessions.

1. Base Operating Support (BOS) Cost Data. Data is required which captures the total annual cost of operating and maintaining Department of the Navy (DON) shore installations. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Two tables are provided. Table 1A identifies "Other than DBOF Overhead" BOS costs and Table 1B identifies "DBOF Overhead" BOS costs. These tables must be completed, as appropriate, for all DON host, independent or tenant activities which separately budget BOS costs (regardless of appropriation), and, are located in the United States, its territories or possessions. Responses for DBOF activities may need to include both Table 1A and 1B to ensure that all BOS costs, including those incurred by the activity in support of tenants, are identified. If both table 1A and 1B are submitted for a single DON activity, please ensure that no data is double counted (that is, included on both Table 1A and 1B). The following tables are designed to collect all BOS costs currently budgeted, regardless of appropriation, e.g., Operations and Maintenance, Research and Development, Military Personnel, etc. Data must reflect FY 1996 and should be reported in thousands of dollars.

a. Table 1A - Base Operating Support Costs (Other Than DBOF Overhead).

This Table should be completed to identify "Other Than DBOF Overhead" Costs. Display, in the format shown on the table, the O&M, R&D and MPN resources currently budgeted for BOS services. O&M cost data must be consistent with data provided on the BS-1 exhibit. Report only direct funding for the activity. Host activities should not include reimbursable support provided to tenants, since tenants will be separately reporting these costs. Military personnel costs should be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Add additional lines to the table (following line 2j., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

**DATA CALL 66
INSTALLATION RESOURCES**

Table 1A - Base Operating Support Costs (Other Than DBOF Overhead)			
Activity Name:		UIC:	
Category	FY 1996 BOS Costs (\$000)		
	Non-Labor	Labor	Total
1. Real Property Maintenance Costs:			
1a. Maintenance and Repair			
1b. Minor Construction			
1c. Sub-total 1a. and 1b.			
2. Other Base Operating Support Costs:			
2a. Utilities	15		15
2b. Transportation	1		1
2c. Environmental			
2d. Facility Leases			
2e. Morale, Welfare & Recreation			
2f. Bachelor Quarters			
2g. Child Care Centers			
2h. Family Service Centers			
2i. Administration			
2j. Other (Specify) (Admin Phones) and other engineering support	2 1		2 1
2k. Sub-total 2a. through 2j:	19		19
3. Grand Total (sum of 1c. and 2k.):	19		19

**DATA CALL 66
INSTALLATION RESOURCES**

b. Funding Source. If data shown on Table 1A reflects more than one appropriation, then please provide a break out of the total shown for the "3. Grand-Total" line, by appropriation:

<u>Appropriation</u>	<u>Amount (\$000)</u>
----------------------	-----------------------

c. Table 1B - Base Operating Support Costs (DBOF Overhead). This Table should be submitted for all current DBOF activities. Costs reported should reflect BOS costs supporting the DBOF activity itself (usually included in the G&A cost of the activity). For DBOF activities which are tenants on another installation, total cost of BOS incurred by the tenant activity for itself should be shown on this table. It is recognized that differences exist among DBOF activity groups regarding the costing of base operating support: some groups reflect all such costs only in general and administrative (G&A), while others spread them between G&A and production overhead. Regardless of the costing process, all such costs should be included on Table 1B. The Minor Construction portion of the FY 1996 capital budget should be included on the appropriate line. Military personnel costs (at civilian equivalency rates) should also be included on the appropriate lines of the table. Please ensure that individual lines of the table do not include duplicate costs. Also ensure that there is no duplication between data provided on Table 1A. and 1B. These two tables must be mutually exclusive, since in those cases where both tables are submitted for an activity, the two tables will be added together to estimate total BOS costs at the activity. Add additional lines to the table (following line 21., as necessary, to identify any additional cost elements not currently shown). Leave shaded areas of table blank.

Other Notes: All costs of operating the five Major Range Test Facility Bases at DBOF activities (even if direct RDT&E funded) should be included on Table 1B. Weapon Stations should include underutilized plant capacity costs as a DBOF overhead "BOS expense" on Table 1B..

**DATA CALL 66
INSTALLATION RESOURCES**

**DATA CALL 66
INSTALLATION RESOURCES**

2. Services/Supplies Cost Data. The purpose of Table 2 is to provide information about projected FY 1996 costs for the purchase of services and supplies by the activity. (Note: Unlike Question 1 and Tables 1A and 1B, above, this question is not limited to overhead costs.) The source for this information, where possible, should be either the NAVCOMPT OP-32 Budget Exhibit for O&M activities or the NAVCOMPT UC/FUND-1/IF-4 exhibit for DBOF activities. Information must reflect FY 1996 budget data supporting the FY 1996 NAVCOMPT Budget Submit. Break out cost data by the major sub-headings identified on the OP-32 or UC/FUND-1/IF-4 exhibit, disregarding the sub-headings on the exhibit which apply to civilian and military salary costs and depreciation. Please note that while the OP-32 exhibit aggregates information by budget activity, this data call requests OP-32 data for the activity responding to the data call. Refer to NAVCOMPTINST 7102.2B of 23 April 1990, Subj: Guidance for the Preparation, Submission and Review of the Department of the Navy (DON) Budget Estimates (DON Budget Guidance Manual) with Changes 1 and 2 for more information on categories of costs identified. Any rows that do not apply to your activity may be left blank. However, totals reported should reflect all costs, exclusive of salary and depreciation.

BRAC-95 CERTIFICATION

Reference: SECNAV NOTE 11000 dtd 8 Dec 93

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

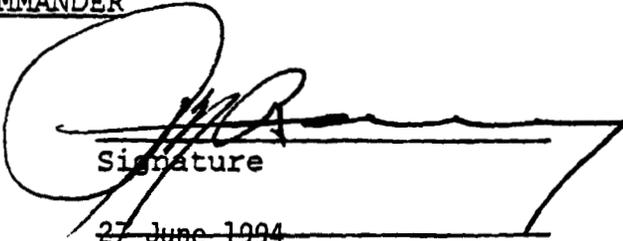

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify the information contained herein is accurate and complete to the best of my knowledge and belief.

Questions for the Activities

Category	Industrial Activities
Type	Naval Weapon Stations,
	Naval Magazines, and
	Strategic Missile Facilities
Claimants	COMNAVSEASYSKOM (Naval Weapon Stations)
	CINCPACFLT (Naval Magazines)
	DIRSSP (Strategic Weapons Facilities)

Notes: In the context of this data Call:

1. Base your responses for FY 1994 and previous years on executed workload, and for FY 1995 and subsequent years on workload as programmed in the FY 1995 Budget Submission and POM-96. Unless otherwise specified, use workload mixes as programmed. In estimating projected workload capabilities, use the activity configuration as of completion of the BRAC-88/91/93 actions.
2. Unless otherwise specified, for questions addressing maximum workload within this Data Call, base your response on an eight hour day/five day normal work week (1-8-5). Please identify any processes which, under normal operations, operate on a different schedule.
3. For purposes of this Data Call, Depot maintenance is regarded as the maintenance performed on material that requires major overhaul or a complete rebuild of parts, assemblies, subassemblies, and end items, including the manufacture of parts, modifications, testing, and reclamation, as required. Depot maintenance serves to support lower categories of maintenance. Depot maintenance provides stocks of serviceable equipment by using more extensive facilities for repair than are available in lower level maintenance activities. Depot or indirect maintenance functions are identified by the type of equipment maintained or repaired.
4. Report all workload performed, clearly identifying origin of all non-DON workload.

If any responses are classified, so annotate the applicable question and include those responses in a separate classified annex.

This document has been prepared in WordPerfect 5.1/5.2.

DATA CALL 46 WORK SHEET FOR MILITARY VALUE ANALYSIS

NAVAL WEAPONS STATION CHARLESTON

R

Primary Activity UIC: 00193

MISSION:

"Provide quality and responsive logistics, technical, and material support to the fleet and other customers in the areas of combat subsystems, equipment, components and retail ammunition management; maintain and operate an explosive ordnance outloading facility; provide homeport services; and, perform other tasks as assigned by higher authority." (OPNAVNOTE 5450 14 Oct 93)

Mission Area

1 Ordnance Storage

1.1 How much (in tons and square feet (SF)) of approved explosive ordnance (magazine) storage exists at the facility?

Table 1.1: Ordnance Storage

	Present Storage		FY 2001	
	SF	Tons	SF	Tons
Total Storage	485,803 ¹	34,224	801,000	50,147 ²

(R)

Data Source: WPNSTA Charleston and POMFLANT P-164, Plant Property Records, CAIMS history, and Inventory Management Specialist review.

¹ Present storage does not include magazines which are currently used by the Polaris Missile Facility Atlantic (POMFLANT), a tenant scheduled for closure in 1995. The magazines will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Storage capacity in FY 2001 reflects addition of the POMFLANT magazines.

² U.S. Army Strategic Mobility Logistics Base (SMLB) Program explosive assets will be on inventory beginning in FY 96; however, we are unable to predict the exact tonnage nor mix of materials involved. Presently, a factor of 14.5395 sq ft per ton was used to estimate tons of explosive ordnance which could be stored per NAVSEAINST 8024.2. This ratio could change in the future.

Storage capacity in FY 2001 reflects addition of the POMFLANT magazines.

² U.S. Army Strategic Mobility Logistics Base (SMLB) Program explosive assets will be on inventory beginning in FY 96; however, we are unable to predict the exact tonnage nor mix of materials involved. Presently, a factor of 14.5395 sq ft per ton was used to estimate tons of explosive ordnance which could be stored per NAVSEAINST 8024.2. This ratio could change in the future.

(R)

DATA CALL 46 WORK SHEET FOR MILITARY VALUE ANALYSIS

NAVAL WEAPONS STATION CHARLESTON

Primary Activity UIC: 00193

MISSION:

*"Provide quality and responsive logistics, technical, and material support to the fleet and other customers in the areas of combat subsystems, equipment, components and retail ammunition management; maintain and operate an explosive ordnance outloading facility; provide homeport services; and, perform other tasks as assigned by higher authority."
(OPNAVNOTE 5450 14 Oct 93)*

Mission Area

1 Ordnance Storage

1.1 How much (in tons and square feet (SF)) of approved explosive ordnance (magazine) storage exists at the facility?

Table 1.1: Ordnance Storage

	Present Storage		FY 2001	
	SF	Tons	SF	Tons
Total Storage	485,954 ¹	38,114	801,000	62,824 ²

¹ Present storage does not include magazines which are currently used by the Polaris Missile Facility Atlantic (POMFLANT), a tenant scheduled for closure in 1995. The magazines

Data Source: WPNSTA Charleston and POMFLANT P-164, Plant Property Records, CAIMS history, and Inventory Management Specialist review.

will be turned over to WPNSTA Charleston during 1997 (best case) or 2000 (worst case). These magazines are environmentally controlled and all are connected to an intruder detection system. The entire area is surrounded with double fencing and perimeter lighting. Storage capacity in FY 2001 reflects addition of the POMFLANT magazines.

² U.S. Army Strategic Mobility Logistics Base (SMLB) Program explosive assets will be on inventory beginning in FY 96; however, we are unable to predict the exact tonnage nor mix of materials involved. Presently, a factor of 12.75 sq ft per ton was used to estimate tons of explosive ordnance which could be stored per NAVSEAINST 8024.2. This ratio could change in the future.

Revised pg

1.2 What fraction of the available storage is in use and projected to be in use for the years indicated? (Note: Retain consistency with NAVSEAINST 8024.2, which indicates that 80% of the square feet in a magazine is effectively 100% full because of access and handling factors.)

Table 1.2: Fraction of Storage in Use

Ord. Cat.	FY91	FY92	FY93	FY94	FY95	FY96 *	FY97 *	FY99 *	FY2001 *
LOE	41.9%	42.9%	42.4%	44.4%	47.5%	50.7%	46.0%	39.8%	35.7%

1.3 Identify any specialized, unique or peculiar characteristics about your facilities, equipment, or skills at your activity to provide for ordnance storage? Highlight those that are "one of a kind" within the DON/DoD.

- WPNSTA Charleston is a warm water, explosive loading port facility with 38' depth at piers.
- Sizable land area allows collocation of large ordnance storage and maintenance capacity with ship explosive outloading capability.
- Large land mass cited for explosive operations with established ESQD arcs which all fall entirely within the geographic boundaries of WPNSTA Charleston.
- WPNSTA Charleston has a Coast Guard approved 8,000 foot diameter off-shore explosive anchorage to support peak load and surge capacity staging of explosive laden vessels.
- Encroachment on the established boundaries and ESQD arcs of the WPNSTA are insulated by wetlands, restricted waterways, and roads.
- It is the only coastal activity with explosive storage, outload, and maintenance capability in the southeastern United States.
- This capability supports Navy, Marine Corps, Coast Guard, and Army explosive operations.
- The Weapons Station geographical site meets support requirements for the Nuclear Power Training Facility (NPTU).
- WPNSTA Charleston will upon, Naval Station Charleston closure, support the Mobile Mine Assembly Group (MOMAG) mission which is geographically linked to mine range off the Charleston, SC coast.
- It is the closest explosive loading port to the homeported ships located in GA, FL, and the Gulf of Mexico.
- WPNSTA Charleston's close proximity to the Charleston Air Force Base provides quick-trans support service for shipment of materials using the Military Air Transport. A Military Traffic Management Command (MTMC) terminal is close by for surface transport. R 08/04/94

2. Ordnance Outload Facility

2.1 What type of ordnance pierside outload facility (container, bulk/breakbulk or specialized) does the station, magazine, or facility operate and what type of vessel can be accommodated? In the table below mark with an "X" those operations at your facility. If your facility accommodates other vessels at anchorage, please note below.

Table 2.1: Outload Characteristics

	Container	Bulk/Break Bulk	Specialized
Amphibious			X
Combatant			X
CV/CVN			
Submarines			X
CLF		X	
Other Break Bulk		X	
Container Ship	X		
Other (TAK)		X	

Data Source: Waterfront Officer and Marine Cargo Planner

2.2 What is the daily (single shift) throughput capacity of the facility in tons for each of the three major types of naval ordnance, i.e. LOE, Threat, Strategic? If your function measures throughput using another unit of measure, provide data in terms of tons in first and your unit of measure in a separate table (specify unit of measure).

Table 2.2: Maximum Daily³ Throughput (Tons)

Ordnance Categories	FY 1990	FY 1991	FY 1992	FY 1993	FY 1994	FY 1995	FY 1996	FY 1997
LOE	130	130	130	130	130	130	130	130
Threat	90	90	90	90	90	90	90	90
Strategic	NA	NA	NA	NA	0	0	0	0

³ The Table 2.2 is based on a single shift day, 40 hour work week.

2. Ordnance Outload Facility, continued

2.3 Identify any specialized, unique or peculiar characteristics about your facilities, equipment, or skills at your activity to attain the above throughput? Specify those that are one of a kind within the DON/DoD.

Pier located within close proximity to Storage and Magazine area.

Data Source: **Station Facility Plans.**

2.4 At the maximum throughput levels documented above, and considering explosive quantity-distance constraints, how many ships by type (AEs/AOEs, Containerships, MSNAP breakbulk ships, etc.) can be berthed at your outload facility at one time (optimal configuration)?

Table 2.4: Maximum Outload by Ship Type

Type Ship	Maximum Number
AE's	2
Combatants	2
LMSR Army	1

Data Source: **Waterfront Officer, Marine Cargo Planner, and MSC Logistic Coordinator.**

2.5 If surface combatants and/or submarines outload at your facility, how many of each type can be loaded at one time (optimal configuration)?

Optimal Configuration = 4 Combatants or 4 Submarines or any combination which equals 4.

Wharf A - 2 ea. Combatants or Submarines.

Pier B - 2 ea. Combatants or Submarines.

Data Source: **Waterfront Officer and Marine Cargo Planner.**

2.6 If the maximum throughput levels documented above were based on a combination of combatants and other vessels, identify the mix that provides for the maximum outload capability.

Maximum Outload Capability Vessel Mix:

Wharf A - 1 ea. Combatant and 1 ea. AE

Pier B - 1 ea. Combatant and 1 ea. AE

TC Dock - 1 ea. LMSR Container or Breakbulk general cargo ship

Data Source: **Waterfront Officer and Marine Cargo Planner**

Data Source: DLMY financial and workload projections. Manufacturing workload based on specific need/requirement and generally with a delivery date of one year or less. No funded workload for FY97 is currently held; however, manufacturing capability exists.

4.2 Identify any specialized, unique or peculiar characteristics about the facilities, equipment, or skills at your activity to perform the above work? Highlight those that are one of a kind within the DON/DoD.

None

4.3 What percent of the above work is performed for FMS, other Military Departments, commercial manufacturers, or other DOD agencies?

FMS effort = 0 %

Commercial effort = 0 %

Other Military Departments (Army) = 0* %

Other Military Department (Air Force) = 0 %

Other DoD Agencies (specify) = 0 %

*** US Army Strategic Mobility Base Program explosive assets will be on inventory beginning in FY 96 and we anticipate maintenance and repair work of packaging and handling equipment.**

Instructions/Notes	.25	.25	.25	.40	.40	.40	.40	.40
Other	2.48	2.48	2.48	1.99	1.99	1.99	1.99	1.99
Total	5.50	5.60	6.60	4.70	4.47	5.06	5.06	5.06

Data Source: Review and observation by Communication Branch/Ordnance Management supervisors and use of projected workload requirements

7.2 Identify any specialized, unique or peculiar characteristics about the facilities, equipment, or skills at your activity to maintain such publications? Highlight those that are one of a kind within the DON/DoD.

None

Data Source: Ordnance Management Division Supervisor

7.3 What alternatives exist for providing the publication support services (e.g. another DON activity, Army or Air Force activity, DoD agency, NATO or other treaty agencies, etc.)?

None. Having another activity or agency, which is not physically located on WPNSTA Charleston property, provide publication support services would reduce the responsiveness to mission requirements and diminish the control effectiveness.

Data Source: Ordnance Management Division Supervisor

Features and Facilities

8. Explosive Quantity Distance Factors

8.1 What restrictions or explosive quantity distance standard limitations apply to the handling of volatile or explosive products or for hot work on submarines, surface combatants, ammunition ships, or oilers on your station/magazine/facility at the piers/wharfs?

ESQD:

- Wharf A - NEW limit of 1.0 million pounds
- Pier B - NEW limit of 1.95 million pounds.
- Pier C - NEW limit of 1.5 million pounds. (Not currently certified for explosives handling)
- TC Dock - NEW limit of 1,371 pounds. (Not currently certified for explosives handling)

Hot Work:

- Hot work may be done at all piers and wharfs; however, hot work is not permitted on a wharf or pier while ordnance handling operations are being performed.

Data Source: WPNSTA Charleston as-built/contract drawings and WPNSTA Charleston Explosive Safety Division.

8.2 What restrictions apply when moving munitions in quantity from the storage magazines to the outload facility?

No known restrictions.

Data Source: Safety Director

8.3 How many AEs, AORs, AOs, or AOEs can be berthed with nesting at your facility, simultaneously? Identify by each pier or wharf.

- Wharf A - 2 (1 each at 2 berths with current)
- Pier B - 2 (1 each at 2 berths against current)
- Pier C - 1 ea (Med Moored)
- TC Dock - 2 ea at 1 berth with current.

Data Source: Waterfront Officer, Marine Cargo Planner, and MSCLANT DET Charleston

8.4 How many surface combatants or nuclear submarines can be berthed with nesting at the weapon station, magazine, or facility, simultaneously? Identify by each pier or wharf.

- Wharf A - 2 (1 each at 2 berths with current)
- Pier B - 2 (1 each at 2 berths against current)
- Pier C - 2 Submarines at 1 berth against current
- TC Dock - 2 at 1 berth with current.

Data Source: Marine Cargo Planner

* Note 1: Per Naval Ordnance Center (NOC) directives, all training functions for mobilization are conducted within the Ordnance Department; specifically in the area of Receipt, Storage, Segregation and Issue of ammunition (RSS&I). Our current ratio of direct to indirect in RSS&I is 85% and 15% respectively. All station Ordnance Facilities are utilized to facilitate SELRES training.

Data Source: Reserve Unit Assignment Document (RUAD), Station Manning Document, Station Mobilization Plan, and Individual Training Plans.

**** Note 2:** Navy Reserve units support NISE East in providing In-Service Engineering to Navy and Marine Corps fleet and shore facilities. These services include electronics material support, conducting engineering studies, analysis, design and test support, install, upgrade, modify, restore, and remove hardware and software, develop logistics requirements and plans, provide program and project support and execution, and to develop training requirements, plans and materials, and follow-on technical support. Facilities used are the Electronic Warfare Cryptology and Communications Laboratories.

Data Source: Bernie Nettles, NISE East Code NE 0AA

***** Note 3:** Training function is to provide ordnance clearance, area search and communications to meet annual deployment and wartime mission requirements. Use WPNSTA Southside Bldg. 3115 with various out buildings, WPNSTA Southside boat landing, and Charleston Mine Training Range.

Data Source: CO, EODMU Twelve ltr 5230 00 of 26 May 1994.

10.2 For each USNR and USMCR unit that trains at your facility, provide the number of authorized billets and number of personnel actually assigned to the unit for the past three full fiscal years. Include both Selected Reserves (SELRES) and Training and Administration of Reserves (TAR) Navy/Full Time Support (FTS) Marine Corps reservists. Explain any reported differences between authorized and actual manning. Reproduce this table as necessary for each unit.

10.3 What is the outlook for your reserve training requirement for FY 1997?

WPNSTA CHASN UNITS: By FY97, all satellite units will have been disestablished and all billets brought into HQ107 with an additional increase of 60 billets requested to support RSS&I.

Data Source: ZBR - COMNAVORDCEN ltr 8000 OPR N4/93-0006 SR NO2/057 of 9 Nov 93.

- COMNAVORDCEN ltr 5725 OPR NOZR SR NO2/175 of 26 Apr 94.

NISE East: Expect same level of functions, manning level, and training requirements.

Data Source: Bernie Nettles, NISE East Code 0AA

EODMU Twelve: Anticipate six Ordnance Clearance Detachments, One Area Search Detachment, and One Mobile Communications Detachment. Will continue operational and training for wartime missions with annual deployments to various NATO Exercises throughout each year.

Data Source: CO, EODMU Twelve ltr 5230 00 of 26 May 1994

10.4 Does your activity possess any specialized, unique or peculiar characteristics to facilitate the reserve training?

WPNSTA Charleston operates a complete Receipt, Segregation, Storage, and Issue (RSS&I) facility for explosive materials. Additionally, WPNSTA Charleston performs renovation and demilitarization to ordnance material and operates explosive outload facilities. Existence of these operations at WPNSTA Charleston allows assigned reserves to be trained in all aspects of ordnance operations, thereby providing maximum preparation for mobilization.

Reservist must complete one or more of ten Job Qualification Requirements for ordnance specific billets in addition to 7 ordnance related indoctrination courses applicable to all SELRES.

Data Source: NAVSEAINST 8020.9, Title 49CFR (DOT), WPNSTA Charleston Instructions, and NAVSEA OP5.1

NISE East provides on the job training and receives support from reservists for operational Electronic Warfare Cryptology and Communications Laboratories.

Data Source: Bernie Nettles, Code 0AA, NISE East

EODMU Twelve maintains an operational commitment to Commander, Explosive Ordnance Disposal Group TWO in the mission areas of diving and demolition and maintains all diving, demolition equipment and material to support this training. The demolition range on WPNSTA CHASN, and the boat ramps on WPNSTA CHASN Southside are critical to meet mission training requirements.

Data Source: CO, EODMU Twelve ltr 5230 00 of 26 May 1994.

Costs

11. Investments

11.1. List the project number, description, funding year, and value of the *capital improvements at your base completed (beneficial occupancy) during FY 1988 to FY 1994*. Indicate if the capital improvement is a result of BRAC realignments or closures.

⁵ NOTE: As submitted during Dental BRAC 93 Data Calls, the Branch Dental Clinic located on the WPNSTA Charleston, will be grossly inadequate upon closure/disestablishment on 30 Sep 95 of the Naval Dental Center located at Naval Station Charleston. The remaining expected patient population of active duty personnel in the Charleston area will require approximately seven Dental Officers, one dental hygienist, and approx. four technicians. A Basic Facility Requirements Study was submitted for a new building for the WPNSTA Charleston Branch Dental Clinic during BRAC 93. The projected cost of \$1,275,000 was not funded. Interim plans are to place one mobile dental trailer and one Atlantic Fleet Van adjacent to the Branch Clinic. Other staff personnel will utilize the Charleston Air Force Base Dental Clinic as required.

Deficiency	Cost to Correct (\$ K)	Result of Corrections

Strategic Concerns

12. Stand Alone and Location Factors

12.1 Identify the support (police, fire protection, etc.) now that is now provided by a nearby base, station or activity and will be needed by your facility if that activity is closed.

Table 12.1: Support Facilities

Support	Currently Obtained from:	Needed if Host Closes?
Police	Self	N/A
Security	Self	N/A
Fire	Self & CAFB ⁶	See note ⁶
Cafeteria	Self	N/A
Parking	Self	N/A
Utilities	Self & Contract	N/A
Child Care	Self	N/A
Port Services	Naval Station Charleston	Yes ⁷

12.2 What is the distance in nautical miles and the average transit time from your activity to the open sea?

Distance = 20 NM

Transit Time = 2.0 hours

⁶ Charleston Air Force Base (CAFB) provides fire protection to our Hunley Park Housing area which is remote to our activity (Ref: Interservice Support Agreement FB4418-91158-014). This service could be provided by the city under a mutual aid agreement. The release of Hunley Park Housing to the Air Force is currently under consideration.

⁷ WPNSTA Charleston will provide port services. Tug and pilot services to be provided by contract.

Data Source: Vicinity map of Charleston area.

12.3 List and indicate the distance in road-miles to Interstate Highways, airports of embarkation, seaports of embarkation, and cargo rail terminals.

Interstate Highway (I-526) = .7 miles

Seaports of embarkation = .2 miles

Airports of embarkation = 3.0 miles

Cargo rail terminals = .0 miles (Internal⁸)

Data Source: T. D'Agostino, CIC, Military Sealift Command

⁸ WPNSTA Charleston is serviced by CSX Railroad and Norfolk Southern Railroad. Mainline service also available by Union Pacific Railroad and AMTRAK in the Charleston area. While all companies provide freight service, AMTRAK also provides passenger service.

R

12. Stand Alone and Location Factors, continued

12.4 Is your activity serviced by rail trackage providing direct access to the commercial rail network?
YES

If Yes, are you serviced by single or multiple tracks? MULTIPLE (# 2)

If No, identify the distance in road-miles separating your activity from the nearest railhead/access.
 Distance = N/A Miles

12.5 List the homeports within the service area of your facility and the distance to each.

Table 12.5: Proximity to Homeport

Homeport	Distance
WPNSTA CHARLESTON	0 NM
NAVSTA CHARLESTON	5 NM
NAVSTA MAYPORT, FLA	135 NM
NAVSTA PASCAGOULA, MS	1,110 NM
NAVSTA INGLESIDE, TX	1,550 NM
NAVSTA NORFOLK, VA	434 NM
SUBBASE KINGS BAY, GA	125 NM
NAVSTA MOBILE, ALA	1,090 NM

(R)

Data Source: Port Services, NAVSTA Charleston, SC

12.6 Identify the factors that limit access to your piers, i.e. bridge height restrictions, channel depth, turning basin constraints, etc. Identify by ship type the largest vessel that can gain access to your piers.

Table 12.6: Pier Access

Largest Vessel	Limiting Factors
LMSR Container/Breakbulk Ship	Bridge Height (150 Ft. @ Mean High) and Water Depth (38 Ft. @ Mean Low) Turning Basin (1,500 Ft.)

Data Source: Pier Operations Foreman, Marine Cargo Planner, Public Works Engineering, MSC LANT Det Charleston, and SC Highway Dept.

NOTE 6: Charleston Air Force Base (CAFB) provides fire protection to our Hunley Park Housing area which is remote to our activity (Ref: Interservice Support Agreement FB4418-91158-014). The service could be provided by the city under a mutual aid agreement. The release of Hunley Park Housing to the Air Force is currently under consideration.

NOTE 7: WPNSTA Charleston will provide port services beginning April 1996 due to the BRAC 93 decision to close Naval Station Charleston. Tug and pilot services to be provided by contract.

NOTE 8: WPNSTA Charleston is serviced by CSX Railroad and Norfolk Southern Railroad. Mainline service also available by Union Pacific and AMTRAK in the Charleston area. While all companies provide freight service, AMTRAK also provides passenger service.

12. Stand Alone and Location Factors, continued

Strategic Concerns

R

13. Contingency and Mobilization Features

13.1 Identify the amount of storage space for explosives or munitions surplus to the planned need, expressed in square feet (SF) at your facility. (Note: For contingency and mobilization purposes, storage space includes revetments, railcars, barges, explosive holding yards, explosive anchorages and barricaded railroad sidyards.) Provide data for each category.

Table 13.1: Contingency/Mobilization Storage

Category of Space	Total SF	Total # of Units	Surplus for Contingency & Mobilization Requirements
Revetments	0	0	
Railcars (50' x 10')	81,400	168	30 ea total 15,000 SF
Barges	0	0	
Explosive Holding Yards	64,444	2	2 ea total 64,444 SF
Explosive Anchorages	50,265,482	1	1 ea @ 50,265,482 SF NEW is 1.0M
Barricaded Railroad Siding	28,080	6	1 ea @ 4,185 SF
Other (specify)			
MPF Sites	374,580	5 ⁹	5 ea total 374,580 SF

(R)

Data Source: WPNSTA Charleston P-164, Production Control Planner, Pier Foreman, and Public Works Engineering.

13.2 What is the fraction and square footage of your excess to the total storage space that is or will be available at each location with the completion of the MILCON projects that have been awarded but are yet to be completed.

$$\begin{aligned} \text{Fraction Excess} &= \frac{0}{} \\ \text{Amount Excess} &= \underline{\underline{0}} \end{aligned}$$

No MILCON projects are currently awarded but not yet completed. No storage facilities are scheduled for WPNSTA Charleston.

Data Source: Public Works Engineering.

⁹ MPF sites are required and fully utilized for normal operations; however, for periods of contingency and mobilization, the MPF assets are considered deployed. This deployment leaves the sites available to support additional explosive material storage requirements.

Strategic Concerns

Revised pg

13. Contingency and Mobilization Features

13.1 Identify the amount of storage space for explosives or munitions surplus to the planned need, expressed in square feet (SF) at your facility. (Note: For contingency and mobilization purposes, storage space includes revetments, railcars, barges, explosive holding yards, explosive anchorages and barricaded railroad sidyards.) Provide data for each category.

Table 13.1: Contingency/Mobilization Storage

Category of Space	Total SF	Total # of Units	Surplus for Contingency & Mobilization Requirements
Revetments	0	0	
Railcars (50' x 10')	81,400	168	30 ea total 15,000 SF (R)
Barges	0	0	
Explosive Holding Yards	64,444	2	2 ea total 64,444 SF
Explosive Anchorages	50,265,482	1	1 ea @ 50,265,482 SF (R)
Barricaded Railroad Siding	28,080	6	1 ea @ 4,185 SF (R)
Other (specify)			
MPF Sites	374,580	5'	5 ea total 374,580 SF

Data Source: WPNSTA Charleston P-164, Production Control Planner, Pier Foreman, and Public Works Engineering.

13.2 What is the fraction and square footage of your excess to the total storage space that is or will be available at each location with the completion of the MILCON projects that have been awarded but are yet to be completed.

$$\begin{aligned} \text{Fraction Excess} &= \frac{0}{} \\ \text{Amount Excess} &= \underline{0} \end{aligned}$$

No MILCON projects are currently awarded but not yet completed. No storage facilities are scheduled for WPNSTA Charleston.

Data Source: Public Works Engineering.

⁹ MPF sites are required and fully utilized for normal operations; however, for periods of contingency and mobilization, the MPF assets are considered deployed. This deployment leaves the sites available to support additional explosive material storage requirements.

Strategic Concerns

13. Contingency and Mobilization Features

13.1 Identify the amount of storage space for explosives or munitions surplus to the planned need, expressed in square feet (SF) at your facility. (Note: For contingency and mobilization purposes, storage space includes revetments, railcars, barges, explosive holding yards, explosive anchorages and barricaded railroad sidyards.) Provide data for each category.

Table 13.1: Contingency/Mobilization Storage

Category of Space	Total SF	# of Units	Comment
Revetments	0	0	
Railcars (50' x 10')	15,000	30	30 ea @ 15,000 SF
Barges	0	0	
Explosive Holding Yards	64,444	2	2 ea @ 64,444 SF
Explosive Anchorages	50,265,482	1	1 ea @ 50,265 SF
Barricaded Railroad Siding	4,500	1	1 ea @ 4,185 SF
Other (specify)			
MPF Sites	374,580	5⁹	5 ea @ 374,580 SF

Data Source: WPNSTA Charleston P-164, Production Control Planner, Pier Foreman, and Public Works Engineering.

13.2 What is the fraction and square footage of your excess to the total storage space that is or will be available at each location with the completion of the MILCON projects that have been awarded but are yet to be completed.

$$\begin{aligned} \text{Fraction Excess} &= \underline{0} \\ \text{Amount Excess} &= \underline{0} \end{aligned}$$

No MILCON projects are currently awarded but not yet completed. No storage facilities are scheduled for WPNSTA Charleston.

Data Source: Public Works Engineering.

⁹ MPF sites are required and fully utilized for normal operations; however, for periods of contingency and mobilization, the MPF assets are considered deployed. This deployment leaves the sites available to support additional explosive material storage requirements.

NOTE 9: MPF sites are required and fully utilized for normal operations; however, for periods of contingency and mobilization, the MPF assets are considered deployed. This deployment leaves the sites available to support additional explosive material storage requirements.

13. Contingency and Mobilization Features, continued

13.3 What ship berthing by general class, may be available for naval ship berthing during holiday surge periods? Address available berthing for the CVN, SSBN, CG-52, LPD, and FFG classes, as a minimum. State answers in terms of the number of ships that can be berthed without nesting. Information is only desired on ship berthing, that, if used for holiday surge berthing, will not interfere with ongoing or planned logistic loadouts or downloading. Also indicate the largest ship possible that can be berthed at each pier and wharf.

Berthing: (See Note 1)

Wharf A	2 ea AE/AOE or 2 ea SSBN or 2 ea CG-52 or 2 ea FFG
Pier C	2 ea SSBN/SSN or 1 ea AE/AOE (Med Moored) or 1 ea AS (Med Moored)
TC Dock	2 ea AE/AOE or 2 ea SSBN/SSN or 2 ea CG-52 or 2 ea FFG
Pier B	Not considered as available for Holiday surge berthing as it would be used for scheduled explosive operations.

Largest Ship:

Wharf A -	LMSR Container/Breakbulk Ship
Pier B -	AS (Tender)
Pier C -	AS (Tender)
TC Dock -	LMSR Container/Breakbulk Ship

Data Source: Waterfront Officer and Marine Cargo Planner.

Note 1. Overall berthing combinations would be restricted to comply with established explosive limits and ESQD arcs.

13.4 Identify any HERO restrictions for operating radars and other sensors of Navy ships at your ordnance piers. Also identify any hot work restrictions or inhibitions against berthing POL or other ships with empty fuel tanks that are not gas-free.

The following are normal restrictions for all weapons stations:

HERO:

The operation of radar and other sensors are restricted only for purposes of maintaining the minimum safe separation distances for HERO UNSAFE, HERO UNRELIABLE, HERO SUSCEPTIBLE and HERO SAFE ordnance as required by NAVSEA OP 3565, Volume II. Accommodations are effected to permit safe transmissions when necessitated by ships requirements.

Data Source: NAVSEA OP 3565 and NAVSEA OP5.

HOT WORK:

Hot work restrictions are applicable as required by all Navy vessels and merchant ships located alongside ammunition piers. Hot work operations aboard vessels in or near a confined space must be certified by a Maritime Gasfree Engineer or a certified Marine Chemist.

Data Source: NAVSEA OP4, NAVSEA OP5, National Fire Protection Association Manuals, OPNAVINST 8023.21C, OPNAVINST 8023.2C.

Strategic Concerns

14. Natural Inhibitors of Operations

14.1 Identify the percent of the planned work schedule at your facility for the period FY 1990-1993 (averaged by month) interrupted by local weather or climatic conditions (i.e., how many man-years are lost annually by month because of: thunder storm, hurricane, tornado, blizzard, below freezing conditions, earthquake or other performance-impinging natural condition?).

Table 14.1.a: Impact on Operations

	January	February	March	April	May	June
Average % Schedule Interrupted	0	0	0	0	1.3	1.3

Table 14.1.b: Impact on Operations

	July	August	September	October	November	December
Average % Schedule Interrupted	2.8	2.8	1.3	0	0	0

Thunderstorms normally occur during the period May through September. Storms occurring during remainder of year are infrequent and seldom result in downtime.

Data Source: Southeast Regional Climate Center and Charleston Air Force Base Weather Center.

Environment and Encroachment

15. Environmental Considerations

15.1 Identify all environmental restrictions to expansion at your activity.

Four red-cockaded woodpecker colonies and two bald eagle nests are currently active in the WPNSTA North area. Expansion which could possibly jeopardize these species would call for a Section 7 consultation with the U.S Fish & Wildlife Service to minimize impacts on the species.

Federal laws protecting wetland areas could potentially alter expansion in areas where jurisdictional wetlands occur. Mitigation of wetland losses (creation or perpetual protection of wetlands in other places) can in most cases address wetland loss and allow projects to proceed.

Data Source: Long Range Natural Resources Management Plan, Field Reports from U.S. Forest Service, Letter from S.C. Wildlife Department.

15.2 Describe the undeveloped acreage or waterfront that is unique to the station or facility. Include any acreage that is suitable for industrial development.

The Naval Weapons Station has approximately 5.4 miles of waterfront. It is approximately 3.3 miles from the northern most ammunition handling wharf (Wharf A) to the southern most pier facility (TC Dock). Pier Bravo is capable of handling ammunition laden ships with a net explosive weight (NEW) of 1,950,000#. Pier Charlie is capable of handling ammunition laden ships with a NEW of 1,500,000#. Wharf Alpha is capable of handling ships with a NEW of 1,000,000# and is capable of handling RORO and container ships. Pier Bravo and Wharf Alpha have explosive handling portal cranes. The Naval Weapons Station woodlands are also home to the red-cockaded woodpecker and the bald eagle. Both of these animals are endangered species; neither of which live in the Explosive Arcs of the Piers.

WPNSTA Charleston has 8,712 acres within the boundaries of ESQD arcs. The combination of explosive piers, storage, and explosive production/maintenance facilities all within this ESQD arcs is unique within DOD.

TC Dock - This dock has the capability to on-load and off-load fuel. This dock routinely handles RORO type ships.

WPNSTA Charleston has 9,498 acres in the Navy Forestry Program, of which approximately 7,042 are available for development. Approximately 2,437 acres are within the established ESQD arcs.

15.3 Identify any specific facilities, programs, or capabilities in regard to the handling and disposal of hazardous materials / waste at your activity.

New consolidated/conforming Hazardous Waste storage facility is under construction, fleet oily waste tank truck support system is operational and a treatment/recycling system is under design.

Stationary Demil furnace and open detonation/open burning site for ordnance/explosives is operational.

Contract to construct a Hazardous Materials Reutilization Store is being released.

16. Encroachment Considerations

16.1 Identify any ground, industrial noise, approach channel, waterway, harbor, bridge height, turning basin, Explosive Quantity Distance Standard (ESQD), HERO, and airspace encroachments of record at your activity.

No encroachments identified for Explosive Safety Quantity Distance (ESQD) or HERO other than Navy owned, operated and controlled.

Table 16.1: Encroachments of Record

Encroachment	Date Recorded or Characteristic	Current Status
Ground	None Recorded	N/A
Industrial Noise	None Recorded	N/A
Waterway	Width & Depth	Minimum Channel Width 400 Ft. Project Depth 38 Ft. Mean Low Water
Harbor	No Restrictions	
Bridge Height	Width & Height	Horizontal Clearance 700 Ft. Vertical Clearance 150 Ft. Mean High Water
Turning Basin	Width	1,500 Ft. at TC Dock 1,325 Ft. at Wharf A
ESQD	Established	Established ESQD arcs are at the boundaries of WPNSTA Charleston No waivers exist.
HERO	Internal	
Airspace	None Recorded	

Data Source: US Army Corps of Engineers drawings, WPNSTA Charleston ESQD Arc Maps & Drawings, FAA Charleston Tower, NAVSEA OP 5, NAVSEA OP 3565.

Quality of Life

17. Military Housing - Family Housing

17.1 Do you have mandatory assignment to on-base housing? NO

Data Source: **OPNAVINST 11101.13J**

17.2 For military family housing in your locale, provide the following information:

Table 17.2: Available Military Family Housing See Note

Type of Quarters	Number of Bedrooms	Total number of units	Number Adequate	Number Substandard	Number Inadequate
Officer	4+	138	138		
Officer	3	203	203		
Officer	1 or 2	10	10		
Enlisted	4+	636	636		
Enlisted	3	1,166	1,166		
Enlisted	1 or 2	522	522		
Mobile Homes		0			
Mobile Home lots		60	N/A		

Note: WPNSTA Charleston serves as the Housing Manager for all Navy housing in the Charleston area.

Data Source: **Enclosure (3) COMNAVBASECHASNINST 11101.4N, CH-1 of 5 Oct 93**

17.3 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means". For all the categories above where inadequate facilities are identified provide the following information.

N/A

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

Data Source: **BASEREP 24 Jun 93**

17. Military Housing - Family Housing, continued

17.4 Complete the following table for the military housing waiting list. Report Number on list as of 31 March 1994.

Table 17.4: Military Housing Waiting List

Pay Grade	Number of Bedrooms	Number on List	Average Wait

	3	36	1 month
	4+	9	1 month
E1-E6	1	0	0
	2	374	4 months *
	3	**	**
	4+	**	**

* Only 20% of inventory consists of two-bedroom units for enlisted personnel. The waiting time will significantly decrease in the next six months as members on two-bedroom waiting list will be assigned three- and four bedroom units. There are only 45 families on the waiting list for the larger units, with a waiting time of only one month. It is anticipated that the waiting time for a two-bedroom unit will decrease to one month by November 1994.

** E1 - E6 included in E7 - E9 three and 4+ bedroom.

Data Source: WPNSTA Charleston Family Housing Waiting Lists produced by NAVHOMES (5/23/94).

17. Military Housing - Family Housing, continued

17.5 What do you consider to be the top five factors driving the demand for base housing? Does it vary by grade category? If so provide details.

Table 17.5: Housing Demand Factors

Top Five Factors Driving the Demand for Base Housing	
1	Desire to live within the Navy Community
2	Affordability
3	Safety and Security
4	Suitability
5	Community Support

DETAILS:

1) **Desire to live within the Navy Community** - In many cases, Navy members and their families are more comfortable residing in a close-knit community with their peers, especially military members assigned to afloat commands who deploy for extended periods of time.

2) **Affordability** - For lower grade enlisted personnel (E-1 through E-4), adequate base housing and utilities' costs covered by BAQ is definitely their top priority.

3) **Safety and Security** - WPNSTA Charleston Security Department provides services for enlisted housing areas (MenRiv Park and Hunley Park) and officer housing on the Naval Weapons Station; Naval Station Security provides services to residents in Naval Base housing. With the exception of Naval Base quarters, residents in other housing areas are also affected by the laws of South Carolina. Accordingly, The Berkeley County/Charleston County Sheriffs' Departments or North Charleston/Goose Creek Police Departments and various other State law enforcement agencies provide security services where appropriate.

4) **Suitability** - All Military Family Housing in Charleston is considered "adequate" in accordance with NAVFAC guidance. Maintenance and improvements on a continuing basis assure superior living conditions for the military families located in the Charleston area.

5) **Community Support** - Medical facilities, child care centers, schools, recreational facilities, Family Service Centers are in close proximity to all housing areas.

As noted in the factors above, priorities would vary by paygrade.

Data Source: Customer feedback; Housing Management experience/opinion.

17.6 What percent of your family housing units have all the amenities required by "The Facility Planning & Design Guide" (Military Handbook 1190 & Military Handbook 1035-Family Housing)?

96 %

Data Source: WPNSTA CHASN housing assets consist of 2,675 family housing units and a 60 space mobile home park. Ninety-six percent of these units have all the amenities required by Military Handbook 1190 and Military Handbook 1035 - Family Housing. Ninety-four townhouse units do not have individual carports or garages. They do have two assigned parking spaces in front of each quarters.

17.7 Provide the utilization rate for family housing for FY 1993.

Table 17.7: Family Housing Utilization

Type of Quarters	Utilization Rate (%)
Adequate	99.3
Substandard	N/A
Inadequate	N/A

Data Source: Annual Family Housing Inventory and Occupancy Report of 30 September 93.

17.8 As of 31 March 1994, have you experienced much of a change since FY 1993? If so, why? If occupancy is under 98% (or vacancy over 2%), is there a reason?

Monthly Family Housing Inventory and Occupancy Reports of Oct, Nov, Dec 93 and Jan, Feb, Mar 94 reveal average occupancy rate of 99.14%.

Quality of Life

18. Military Housing - Bachelor Quarters

18.1 Provide the utilization rate for Bachelor Enlisted Quarters(BEQs) for FY 1993.

Table 18.1: BEQ Utilization

Type of Quarters	Utilization Rate
Adequate	83%
Substandard	73%
Inadequate	None

Data Source: Unaccompanied Personnel Housing Inventory and Utilization Data (DD Form 2085)

18.2 As of 31 March 1994, have you experienced much of a change since FY 1993? If so, why? If occupancy is under 95% (or vacancy over 5%), is there a reason? No.

Yes. Due to the implementation of the minimum standards of acceptability effective 1 Oct 93.

Data Source: Semi-annual report DOD Unaccompanied Personnel Housing Inventory (DD Form 2085)

18.3 Calculate the Average on Board (AOB) for Geographic Bachelors (GB) as follows:

$$AOB = \frac{(\# \text{ GB}) \times (\text{average \# of days in barracks})}{365}$$

$$365 \text{ AOB} = \underline{153.86}$$

$$\frac{24 \times 2,340}{365} = 153.86$$

Data Source: BEQ monthly status report

18.4 Indicate in the following chart the percentage of Geographic Bachelors (GB) by category of reasons for family separation. Provide comments as necessary.

Table 18.4: Reasons for Geographic Separation (BEQ)

Reason for Separation from Family	Number of GB	Percent of GB	Comments
Family Commitments (children in school, financial, etc.)	24	100	
Spouse Employment (non-military)	0	0	
Other	0	0	
TOTAL	24	100 %	

Data Source: WPNSTA Charleston Supply Department.

18.5 How many enlisted Geographic Bachelors (GB) do not live on base?

Data not available.

GB Off-Base = unknown

18. Military Housing - Bachelor Quarters, continued:

18.6 Provide the utilization rate for Bachelor Officers Quarters (BOQs) for FY 1993. N/A

Table 18.6: BOQ Utilization

Type of Quarters	Utilization Rate
Adequate	N/A
Substandard	
Inadequate	

No BOQ at WPNSTA Charleston.

18.7 As of 31 March 1994, have you experienced much of a change since FY 1993? If so, why? If occupancy is under 95% (or vacancy over 5%), is there a reason?

N/A

18.8 Calculate the Average on Board (AOB) for Geographic Bachelors as follows:

$$AOB = \frac{\# \text{ GB} \times \text{average \# days in barracks}}{365}$$

365

$$AOB = \underline{\hspace{2cm}}$$

N/A

18.9 Indicate in the following chart the percentage of Geographic Bachelors by category of reasons for family separation. Provide comments as necessary.

Table 18.9: Reasons for Geographic Separation (BOQ)

Reason for Separation from Family	Number of GB	Percent of GB	Comments
Family Commitments (children in school, financial, etc.)	N/A		
Spouse Employment (non-military)			
Other			
TOTAL		100	

18.10 How many officer Geographic Bachelors do not live on base?

Data not available

$$\# \text{ GB Off-Base} = \underline{\hspace{2cm}}$$

20. Base Family Support Facilities and Programs

20.1 Complete the following table on the availability of child care in a child care center on your base.

BUILDING 755 - DROP-IN CENTER

Table 20.1: Child Care Availability

Age Category	Capacity (# of Children)	SF (See Note 1)			Number on Wait List	Average Wait (Days)
		Adequate	Substandard	Inadequate		
0-6 Months	3		528		N/A	N/A
6-12 Months	2		528		N/A	N/A
12-24 Months	10		480		N/A	N/A
24-36 Months	14		572		N/A	N/A
3-5 Years	47		1,684		N/A	N/A

NOTE: Rated Substandard because each classroom does not have required toileting: 1 running water sink for each 15 3-5 years old, 2 for each 8 under 3. Upgrade project design 100% complete. Project submitted as No. 1 Priority in budget.

NOTE 1: Total facility SF equal 4,803. Classroom SF equal 3,792. Balance of SF is administrative, halls, etc.

BUILDING 788 - WEEKLY CENTER

Table 20.1: Child Care Availability

Age Category	Capacity (# of Children)	SF (see Note 2)			Number on Wait List	Average Wait (Days)
		Adequate	Substandard	Inadequate		
0-6 Months	10	1,260			9	90
6-12 Months	6	1,260			12	90
12-24 Months	30	1,976			36	90
24-36 Months	29	936			21	90
3-5 Years	58	2,273			74	150

NOTE 2: Total facility SF equal 13,184. Classroom SF equal 7,705. Balance of SF is administrative, halls, etc.

Data Source: CDC Attendance Logs and property records

20.2 In accordance with NAVFACINST 11010.44E, an inadequate facility cannot be made adequate for its present use through "economically justifiable means." For all the categories above where inadequate facilities are identified provide the following information:

NONE

- a. Facility type/code:
- b. What makes it inadequate?
- c. What use is being made of the facility?
- d. What is the cost to upgrade the facility to substandard?
- e. What other use could be made of the facility and at what cost?
- f. Current improvement plans and programmed funding:
- g. Has this facility condition resulted in C3 or C4 designation on your BASEREP?

20.3 If you have a waiting list, describe what programs or facilities, other than those sponsored by your command, are available to accommodate those on the list.

Community Child Care Center and Family Child Care Provider List

20.4 How many "certified home care providers" are registered at your base?

= 45

Data Source: **May 94 Family Child Care Provider List**

20.5 Are there other military child care facilities within 30 minutes of the base? **Yes**
State owner and capacity (e.g. 60 children, 0-5 years).

Naval Base Charleston 141 (116-weekly/25-drop-in)(0-5 years).
Charleston Air Force Base 155 weekly (6 months-5 years)

20. Base Family Support Facilities and Programs, continued

20.6 Complete the following table for services available on your base. If you have any services not listed, include them at the bottom.

Table 20.6: Available Services

Service	Unit of Measure	Quantity
Exchange	SF	26,400
Gas Station	SF	4,059
Auto Repair	SF	*
Auto Parts Store	SF	*
Commissary	SF	35,228
Mini-Marts (2 ea) (5831 + 2400 SF)	SF	8,231
Package Store	SF	2,796
Fast Food Restaurants	Each	1
Bank/Credit Union	Each	1
Family Service Center	SF	3,354
Laundromat	SF	435
Dry Cleaners	Each	0
ARC	PN	0
Chapel ¹¹	PN	866
FSC Classroom/Auditorium	PN	0
Post Office B-725	SF	716
Car Wash B-769	SF	1,056

* Auto repair and Auto Parts Store consolidated with Gas Station.

Data Source: Navy Exchange Officer/Public Works Dept.

¹¹ WPNSTA Charleston has two chapels: All Saints and the Good Shepherd.

21. Metropolitan Areas

21.1 Identify proximate major metropolitan areas closest to your base (provide at least three):

Table 21.1: Proximate Metropolitan Areas

City	Distance (Miles)
Charleston/ North Charleston Metropolitan Statistical Area (MSA)¹²	WPNSTA Charleston is located within the MSA.
Columbia, SC	100
Charlotte, NC	210
Atlanta, GA	290

Data Source: **Rand McNally Road Atlas 1992.**

¹² Comprised of three counties - Berkeley, Charleston, and Dorchester.

Quality of Life

22. VHA Rates

22.1 Identify the Standard Rate VHA Data for Cost of Living in your area:

Table 22.1: VHA Rates

Paygrade	With Dependents	Without Dependents
E1	75.42	42.20
E2	46.28	29.10
E3	34.44	25.37
E4	39.81	27.79
E5	47.89	33.44
E6	63.02	42.90
E7	64.45	44.77
E8	61.17	46.25
E9	75.11	57.02
W1	147.31	111.87
W2	102.82	80.64
W3	134.96	113.55
W4	124.80	110.65
O1E	148.48	110.14
O2E	117.66	93.81
O3E	175.99	148.89
O1	98.27	72.41
O2	87.09	68.07
O3	131.34	110.58
O4	107.51	93.49
O5	159.20	131.65
O6	129.79	107.43
O7	58.01	47.13

Quality of Life

23. Off-base Housing Rental and Purchase

23.1 Fill in the following table for average rental costs in the area for the period 1 April 1993 through 31 March 1994.

Table 23.1: Recent Rental Rates

Type of Rental	Average Monthly Rent		Average Monthly Utilities Cost
	Annual High	Annual Low	
Efficiency	350	275	Included
Apartment (1-2 Bedroom)	425	350	75
Apartment (3+ Bedroom)	475	450	120
Single Family Home (3 Bedroom)	700	500	120
Single Family Home (4+ Bedroom)	900	900	150
Town House (2 Bedroom)	450	425	75
Town House (3+ Bedroom)	500	475	120
Condominium (2 Bedroom)	475	450	75
Condominium (3+ Bedroom)	500	475	120

Data Source: Housing Referral Listing maintained in the Housing Referral Office. Utilities cost provided by South Carolina Electric & Gas (SCE&G) Information Center.

23.2 What was the rental occupancy rate in the community as of 31 March 1994?

Table 23.2: Rental Occupancy Rate

Type Rental	Occupancy Rate (%)
Efficiency	85
Apartment (1-2 Bedroom)	85
Apartment (3+ Bedroom)	85
Single Family Home (3 Bedroom)	85
Single Family Home (4+ Bedroom)	95
Town House (2 Bedroom)	85
Town House (3+ Bedroom)	85
Condominium (2 Bedroom)	85
Condominium (3+ Bedroom)	85

Data Source: Greater Charleston Apartment Association

23. Off-base Housing Rental and Purchase, continued

23.3 What are the median costs for homes in the area?

Table 23.3: Regional Home Costs

Type of Home	Median Cost
Single Family Home (3 Bedroom)	80,000
Single Family Home (4+ Bedroom)	125,000
Town House (2 Bedroom)	60,000
Town House (3+ Bedroom)	65,000
Condominium (2 Bedroom)	60,000
Condominium (3+ Bedroom)	65,000

Data Source: Charleston - Trident MLS statistics for Jan 1993 - Dec 1993.

23.4 For calendar year 1993, from the local MLS listings, provide the number of 2, 3, and 4 bedroom homes available for purchase. Use only homes for which monthly payments would be within 90 to 110 percent of the E5 BAQ and VHA for your area.

Table 23.4: Housing Availability

Month	Number of Bedrooms		
	2	3	4+
January	74	165	19
February	84	186	21
March	75	168	19
April	82	182	21
May	80	179	20
June	91	203	23
July	88	195	22
August	94	210	24
September	81	180	20
October	80	177	20
November	69	154	17
December	51	113	13

Data Source: Charleston - Trident MLS statistics for Jan 1993 - Dec 1993.

23.5 Describe the principle housing cost drivers in your local area.

Location - Convenient to:

- (1) schools
- (2) medical facilities
- (3) workplace
- (4) shopping areas.

Condition -

- (1) environs of neighborhood
- (2) house exterior/landscaping
- (3) house interior cleanliness/repair/upkeep/decor.

Economy - Job opportunity set economic climate - lost jobs resulting in relocations out of area tend to drive costs down; as new job opportunities become available, costs would increase accordingly.

Data Source: Real Estate Associate/Property Manager of West Ashley Property Management, Inc.

Quality of Life

24. Sea-Shore Opportunities

24.1 For the top five sea intensive ratings in the principle warfare community your base supports, provide the following:

Table 24.1: Sea Shore Opportunities

Rating	# Sea Billets in Local Area	# Shore Billets in Local Area
SK	N/A	8
MS	N/A	7
GM	N/A	11
MM	N/A	4
RP	N/A	4

Data Source: **Enlisted Distribution and Verification Report**

25. Commuting Distances

25.1 Complete the following table for the average one-way commute for the five largest concentrations of military and civilian personnel living off-base.

Table 25.1: Commuting Distances

Location	% Employees	Distance (mi)	Time (min)
Goose Creek	32	7	10
Summerville	22	20	30
North Charleston	15.1	12	16
Moncks Corner	8.6	20	26
Charleston	5	21	25

Data Source: **Count of employees by zip code. Charleston area map.**

Quality of Life

26. Regional Educational Opportunities

Complete the tables below to indicate the civilian educational opportunities available to service members stationed at your activity (to include any outlying fields) and their dependents:

26.1 List the local educational institutions which offer programs available to dependent children.

Indicate the school type (e.g. DoDDS, private, public, parochial, etc.), grade level (e.g. pre-school, primary, secondary, etc.), what students with special needs the institution is equipped to handle, cost of enrollment, and for high schools only, the average SAT/ACT score of the class that graduated in 1993 and the number of students in that class who enrolled in college in the fall of 1994.

Table 26.1: Educational Opportunities

27. Spousal Employment Opportunities

27.1 Provide the following data on spousal employment opportunities.

Table 27.1: Spouse Employment

Skill Level	# Military Spouses Serviced by FSC Spouse Employment Assistance			Local Community Unemployment Rate (%)
	1991	1992	1993	
Professional				
Manufacturing				
Clerical				
Service				
Other ¹⁴	214	202	113	6.3%

¹⁴ These numbers include all categories. Breakdown between categories not available.

28. Medical / Dental Care

28.1 Do your active duty personnel have any difficulty with access to medical or dental care, in either the military or civilian health care system? Develop the why of your response.

No. The Branch Clinic offers general ambulatory care Monday through Friday from 0730 until 1600 with the exception of Thursdays when the Clinic secures at 1230 for field day and training of assigned personnel. The range of treatment includes diagnostic, invasive and non-invasive procedures, therapeutic, health promotion and disease prevention as well as continuity of care for chronic disease. The clinic is divided into two sections, Family Practice and Active Duty Military appointments.

Additional Occupational Health and Radiation Health services are provided in Building 754. Ancillary services include:

Pharmacy, Laboratory, Radiology, Immunization/Allergy Clinic, Medical Records Department, Level IV Emergency Services (Assessment and Transportation to MTF), and Optometry Clinic.

The Branch Dental Clinic takes care of all Naval Weapons Station Charleston active duty personnel with some appointments taken care of by the main Dental Clinic located on the Charleston Naval Base. The main Dental Clinic will close due to BRAC 93. (See NOTE to question 11.6).

Other services are available at Naval Hospital Charleston and Charleston Air Force Base Clinic.

28.2 Do your military dependents have any difficulty with access to medical or dental care, in either the military or civilian health care system? Develop the why of your response.

No. The Naval Weapons Station Charleston Branch Clinic sees those eligible beneficiaries that live in the adjacent MenRiv military housing. Providers from the Spectrum Corporation provide care through a partnership program with the Naval Hospital in Charleston at no charge to the beneficiary.

Dental care for military dependents is provided under the Delta Dental Plan.

Other services are available at Naval Hospital Charleston and Charleston Air Force Base Clinic.

29. Crime Rate

29.1 Complete the table below to indicate the crime rate for your activity for the last three fiscal years. The source for case category definitions to be used in responding to this question are found in the NCIS Manual, dated 23 February 1989, at Appendix A, entitled "Case Category Definitions." Note: the crimes reported in this table should *include* (a) all reported criminal activity which occurred on base regardless of whether the subject or the victim of that activity was assigned to or worked at the base; *and* (b) all reported criminal activity off base.

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 46

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

ENVIRONMENTAL DATA CALL

Responses to the following questions provide data that will allow an assessment of the potential environmental impact associated with the closure or realignment of a Navy shore activity. This criterion consists of:

- Endangered/Threatened Species and Biological Habitat
- Wetlands
- Cultural Resources
- Environmental Facilities
- Air Pollution
- Environmental Compliance
- Installation Restoration
- Land/Air/Water Use

As part of the answers to these questions, a *source citation* (e.g., 1993 base loading, 1993 base-wide Endangered Species Survey, 1993 letter from USFWS, 1993 Base Master Plan, 1993 Permit Application, 1993 PA/SI, etc.) must be included. It is probable that, at some point in the future, you will be asked to provide additional information detailing specifics of individual characteristics. In anticipation of this request, supporting documentation (e.g., maps, reports, letters, etc.) regarding answers to these questions should be retained. Information needed to answer these questions is available from the cognizant EFD Planning and Real Estate Divisions, and Environment, Safety, and Health Divisions; and from the activity Public Works Department, and activity Health Monitoring and Safety Offices.

For purposes of the questions associated with land use at your base is *defined as land* (acreage owned, withdrawn, leased, and controlled through easements); *air* (space controlled through agreements with the FAA, e.g., MOAs); *and water* (navigation channels and waters along a base shoreline) *under the control of the Navy*.

Provide a list of the tenant activities with UICs that are covered in this response.

See page 30.

1. ENDANGERED/THREATENED SPECIES AND BIOLOGICAL HABITAT

1a. For federal or state listed endangered, threatened, or category 1 plant and/or animal species on your base, complete the following table. Critical/sensitive habitats for these species are designated by the U. S. Fish and Wildlife Service (USFWS). A species is present on your base if some part of its life-cycle occurs on Navy controlled property (e.g., nesting, feeding, loafing). Important Habitat refers to that number of acres of habitat that is important to some life cycle stage of the threatened/endangered species that is not formally designated.

SPECIES (plant or animal)	Designation (Threatened/ Endangered)	Federal/ State	Critical / Designated Habitat (Acres)	Important Habitat (acres)
<i>Trichechus manatus - West Indian Manatee</i>	<i>Endangered</i>	<i>Federal</i>	0	0
Picoides borealis - Red-cockaded woodpecker	endangered	Federal	0	50
Alligator mississippiensis - American alligator	threatened	Federal	0	244
Sterna albifrons - Least tern	threatened	State	0	1
Acipenser brevirostrum - Shortnose sturgeon	endangered	Federal	0	0
Haliaeetus leucocephalus - bald eagle	endangered	Federal	0	324

Data Source: WPNSTA CHASN Long Range Natural Resources Plan

1b.

Have your base operations or development plans been constrained due to: - USFWS or National Marine Fisheries Service (NMFS)? - State required modifications or constraints? If so, identify below the impact of the constraints including any restrictions on land use.	NO
Are there any requirements resulting from species not residing on base, but which migrate or are present nearby? If so, summarize the impact of such constraints.	NO

1c. If the area of the habitat and the associated species have not been identified on base maps provided in Data Call 1, submit this information on an updated version of Data Call 1 map.

See Attachment (1)

1d.

Have any efforts been made to relocate any species and/or conduct any mitigation with regards to critical habitats or endangered/threatened species? Explain what has been done and why.	NO
--	-----------

1e.

Will any state or local laws and/or regulations applying to endangered/threatened species which have been enacted or promulgated but not yet effected, constrain base operations or development plans beyond those already identified? Explain.	NO
---	-----------

2. WETLANDS

Note: Jurisdictional wetlands are those areas that meet the wetland definitional criteria detailed in the Corps of Engineers (COE) Wetland Delineation Manual, 1987, Technical Report Y-87-1, U.S. Army Engineer Waterway Experiment Station, Vicksburg, MS or officially adapted state definitions.

2a.

Does your base possess federal jurisdictional wetlands?	YES
Has a wetlands survey in accordance with established standards been conducted for your base?	NO
When was the survey conducted or when will it be conducted? Survey currently underway expected to complete 1 Jan 95.	
What percent of the base has been surveyed?	
What is the total acreage of jurisdictional wetlands present on your base?	Unknown at present

Data Source: **WPNSTA CHASN Long Range Natural Resources Plan**

2b. If the area of the wetlands has not been identified on base maps provided in Data Call 1, submit this on an updated version of Data Call 1 map.

2c. Has the EPA, COE or a state wetland regulatory agency required you to modify or constrain base operations or development plans in any way in order to accommodate a jurisdictional wetland? **YES**
 _ If YES, summarize the results of such modifications or constraints.

1. As part of construction of the Standard Missile Test Facility, a request was made to fill 4.32 acres of freshwater marsh. Request granted after mitigation agreed on. A 10 acre easement with a 60 foot buffer was placed around an existing wetland to protect and maintain the area.

2. As part of construction of the Alternate access route, a request was made to fill three acres of saltwater marsh and two acres of freshwater marsh. Request granted after mitigation agreements were made. This called for creation of 5.2 acres of salt marsh and one acre of freshwater marsh.

3. As part of construction of the Nuclear Propulsion Training Unit, a request was made to fill 2.5 acres of freshwater marsh. Mitigation involved creation of 2.5 acres of freshwater marsh.

3. CULTURAL RESOURCES

3a.

Has a survey been conducted to determine historic sites, structures, districts or archaeological resources which are listed, or determined eligible for listing, on the National Register of Historic Places? If so, list the sites below.	NO
--	-----------

NOTE: Survey is underway. Field work is complete. Report from contractor due 7/95.

3b.

Has the President's Advisory Council on Historic Preservation or the cognizant State Historic Preservation Officer required you to mitigate or constrain base operations or development plans in any way in order to accommodate a National Register cultural resource? If YES, list the results of such modifications or constraints below.	NO
--	-----------

3c.

Are there any on base areas identified as sacred areas or burial sites by Native Americans or others? List below.	NO
---	-----------

4. ENVIRONMENTAL FACILITIES

Notes: If your facility is permitted for less than maximum capacity, state the maximum capacity and explain below the associated table why it is not permitted for maximum capacity. Under "Permit Status" state when the permit expires, and whether the facility is operating under a waiver. For permit violations, limit the list to the last 5 years.

4a.

Does your base have an operating landfill?					NO
ID/Location of Landfill	Permitted Capacity (CYD)		Maximum Capacity (CYD)	Contents ¹	Permit Status
	TOTAL	Remaining			

¹ Contents (e.g. building demolition, asbestos, sanitary debris, etc) N/A

Are there any current or programmed projects to correct deficiencies or improve the facility. N/A

4b. If there are any non-Navy users of the landfill, describe the user and conditions/agreements.

4c.

Does your base have any disposal, recycling, or incineration facilities for solid waste?					YES
Facility/Type of Operation	Permitted Capacity	Ave Daily Throughput	Maximum Capacity	Permit Status	Comments
Waste Incinerator	100 Lb/Hr	75 Lbs	100 Lb/Hr		
Waste Incinerator	100 Lb/Hr	125 Lbs	100 Lb/Hr		
DEMIL Furnace	1.5 Lb/Hr		1.5 Lb/Hr		Furnace has been closed but has now complied with all permit requirements and will re-start operations on 30 Apr 94.

List any permit violations and projects to correct deficiencies or improve the facility.

4d.

Does your base own/operate a Domestic Wastewater Treatment Plant (WWTP)?					NO
ID/Location of WWTP	Permitted Capacity	Ave Daily Discharge Rate	Maximum Capacity	Permit Status	Level of Treatment/Year Built

List permit violations and discuss any projects to correct deficiencies.

4e. If you do not have a domestic WWTP, describe the average discharge rate of your base to the local sanitary sewer authority, discharge limits set by the sanitary sewer authority (flow and pollutants) and whether the base is in compliance with their permit. Discuss recurring discharge violations.

Wastewater treatment is provided by Berkeley County Water and Sanitation Authority (BCW&SA). WPNSTA, CHASN has a contracted capacity of 1.2 mgd. The average daily flow is 1.046mgd for the past 12 months.

PRE-TREATMENT PERMIT DISCHARGE LIMITS

PARAMETER	CONCENTRATION (mg/l)
BOD5	300
Cadmium	2.0
Chloride	4000
Copper	.5
Flash Point	>140 degree F
Oil & Grease	100
Lead	0.15
pH	b/w 6.0-9.0
Total Solids	720
TSS	300
Zinc	1.5

Data Source: **BCW&SA flow records, Pre-treatment permit.**

4f.

Does your base operate an Industrial Waste Treatment Plant (IWTP)?					NO
ID/Location of IWTP	Type of Treatment	Permitted Capacity	Ave Daily Discharge Rate	Maximum Capacity	Permit Status

List any permit violations and projects to correct deficiencies or improve the facility.

4g. Are there other waste treatment flows not accounted for in the previous tables? Estimate capacity and describe the system.

NO

4h.

Does your base operate drinking Water Treatment Plants (WTP)?				NO	
ID/Location of WTP	Operating (GPD)		Method of Treatment	Maximum Capacity	Permit Status
	Permitted Capacity	Daily Rate			

List permit violations and projects/actions to correct deficiencies or improve the facility.

4i. If you do not operate a WTP, what is the source of the base potable water supply. State terms and limits on capacity in the agreement/contract, if applicable.

CHARLESTON COMMISSIONER OF PUBLIC WORKS

WPNSTA Charleston point of connection (Redbank at bldg. 31): 2500gpm @ 60psi for 90 minutes, WPNSTA South (near gate): 500 gpm @ 40psi for 90 minutes.

Data Source: **Contract N62467-89-C-1805**

4j.

Does the presence of contaminants or lack of supply of water constrain base operations. Explain.	NO
--	-----------

4k.

Other than those described above does your base hold any NPDES or stormwater permits? If YES, describe permit conditions.	YES
If NO, why not and provide explanation of plan to achieve permitted status.	

NOTE: Draft Permit issued but has not been adopted as final. Current Permit is expired but remains in effect until new Permit issued. Since cooling water towers and boiler are now connected to the Sanitary we actually do not need a NPDES Permit. NWS Charleston is a member of the EPA Group Storm Water permit application. Storm Water Permit is pending.

4l.

Does your base have bilge water discharge problem?	NO
Do you have a bilge water treatment facility?	NO

4m.

Will any state or local laws and/or regulations applying to Environmental Facilities, which have been enacted or promulgated but not yet effected, constrain base operation or development plans beyond those already identified? Explain.	NO
--	-----------

4n. What expansion capacity is possible with these Environmental Facilities? Will any expansions/upgrades as a result of BRACON or projects programmed through the Presidents budget through FY 97 result in additional capacity? Explain.

No expansion is expected through FY 97.

4o. Do capacity limitations on any of the facilities discussed in question 4 pose a present or future limitation on base operations? Explain.

NO

5. AIR POLLUTION

5a.

What is the name of the Air Quality Control Areas (AQCA) in which the base is located? <u>Trident District</u>
Is the installation or any of its OLFs or non-contiguous base properties located in different AQCA's? <u>NO</u> . List site, location and name of AQCA.

5b. For each parcel in a separate AQCA fill in the following table. Identify with and "X" whether the status of each regulated pollutant is: attainment/nonattainment/maintenance. For those areas which are in non-attainment, state whether they are: Marginal, Moderate, Serious, Severe, or Extreme. State target attainment year.

Site: WPNSTA Charleston AQCA: Trident District

Pollutant	Attainment	Non-Attainment	Maintenance	Target Attainment Year ¹	Comments ²
CO	X			NA	NA (R)
Ozone	X			NA	NA (R)
PM-10	X			NA	NA (R)
SO ₂	X			NA	NA (R)
NO ₂	X			NA	NA (R)
Pb	X			NA	NA (R)

¹ Based on national standard for Non-Attainment areas or SIP for Maintenance areas.

² Indicate if attainment is dependent upon BRACON, MILCON or Special Projects. Also indicate if the project is currently programmed within the Presidents FY 97 budget.

5. AIR POLLUTION

5a.

<p>What is the name of the Air Quality Control Areas (AQCA) in which the base is located? <u>Trident District</u></p>
<p>Is the installation or any of its OLFs or non-contiguous base properties located in different AQCA's? <u>NO</u>. List site, location and name of AQCA.</p>

5b. For each parcel in a separate AQCA fill in the following table. Identify with an "X" whether the status of each regulated pollutant is: attainment/nonattainment/maintenance. For those areas which are in non-attainment, state whether they are: Marginal, Moderate, Serious, Severe, or Extreme. State target attainment year.

Site: WPNSTA Charleston AQCA: Trident District

Pollutant	Attainment	Non-Attainment	Maintenance	Target Attainment Year ¹	Comments ²
CO	X				
Ozone	X				
PM-10	X				
SO ₂	X				
NO ₂	X				
Pb	X				

¹ Based on national standard for Non-Attainment areas or SIP for Maintenance areas.
² Indicate if attainment is dependent upon BRACON, MILCON or Special Projects. Also indicate if the project is currently programmed within the President's FY 97 budget.

5c. For your base, identify the baseline level of emissions, established in accordance with the Clean Air Act. Baseline information is assumed to be 1990 data or other year as specified. Determine the total level of emissions (tons/yr) for CO, NOx, VOC, PM10 for the general sources listed. For all data provide a list of the sources and show your calculations. Use known emissions data, or emissions derived from use of state methodologies, or identify other sources used. "Other Mobile" sources include such items as ground support equipment.

Emission Sources (Tons/Year)					
Pollutant	Permitted Stationary	Personal Automobiles	Aircraft Emissions	Other Mobile	Total
CO	15.342				15.342
NOx	69.926				69.926
VOC	31.332				31.332
PM10	2.876				2.876

Data/Calculation Source: See Attachment (2)

5d. For your base, determine the total FY1993 level of emissions (tons/yr) for CO, NOx, VOC, PM10 for the general sources listed. For all data provide a list of the sources and show your calculations. Use known emissions data, or emissions derived from use of state methodologies, or identify other sources used. "Other Mobile" sources include such items as ground support equipment.

Emissions Sources (Tons/Year)					
Pollutant	Permitted Stationary	Personal Automobiles	Aircraft Emissions	Other Mobile	Total
CO	15.342				15.342
NOx	69.926				69.926
VOC	31.332				31.332
PM10	2.876				2.876

Data Source: David & Floyd Emission Inventory and Compliance Analysis Sources and Calculations shown on Attachment (3).

Revised pg

5e. Provide estimated increases/decreases in air emissions (Tons/Year of CO, NOx, VOC, PM10) expected within the next six years (1995-2001). Either from previous BRAC realignments and/or previously planned downsizing shown in the Presidents FY 97 budget. Explain.

Non-quantifiable. Estimate Decrease as systems, equipment, and processes become more efficient.

(R)

5f. Are there any critical air quality regions (i.e. non-attainment areas, national parks, etc.) within 100 miles of the base?

**Cape Romain National Wildlife Refuge
Francis Marion National Forest**

5g. Have any base operations/mission/functions (i.e.: training, R&D, ship movement, aircraft movement, military operations, support functions, vehicle trips per day, etc.) been restricted or delayed due to air quality considerations. Explain the reason for the restriction and the "fix" implemented or planned to correct.

NO

5h. Does your base have Emission Reduction Credits (ERCs) or is it subject to any emission offset requirements? If yes, provide details of the sources affected and conditions of the ERCs and offsets.

NO

Is there any potential for getting ERCs?

NO

(R)

5e. Provide estimated increases/decreases in air emissions (Tons/Year of CO, NO_x, VOC, PM₁₀) expected within the next six years (1995-2001). Either from previous BRAC realignments and/or previously planned downsizing shown in the Presidents FY 97 budget. Explain.

Estimate Decrease as systems, equipment, and processes become more efficient.

¹ Type site: CERCLA, 'RCRA corrective action (CA), UST or other (explain)

² Status = PA, SI, RI, RD, RA, long term monitoring, etc.

7c. Have any contamination sites been identified for which there is no recognized/accepted remediation process available? List.

NO

7d.

Is there a groundwater treatment system in place?	NO
Is there a groundwater treatment system planned?	NO

State scope and expected length of pump and treat operation.

7e.

Has a RCRA Facilities Assessment been performed for your base?	NO
--	----

7f. Does your base operate any "Conforming Storage" facilities for handling hazardous materials? If YES, describe facility, capacity, restrictions, and permit conditions.

NO

R

7g. Does your base operate any "Conforming Storage" facilities for handling hazardous waste? If YES, describe facility, capacity, restrictions, and permit conditions.

YES

FACILITY	CAPACITY	PERMIT CONDITIONS
Bldg 2306 - Fully permitted 4,523 sqft building whose construction is due to complete Sept 94.	21,120 gallons	RCRA Part B Facility Permit
PCB Storage Facility - A fully permitted approx. 1,000 sqft building.	375 gallons	TSCA Regulations
N.side EOD Range - Open ground Class C range per OP-5.	78,400 sq ft	Part B Permit

7h. Is your base responsible for any non-appropriated fund facilities (exchange, gas station) that require cleanup? If so, describe facility/location and cleanup required/status.

Yes. MWR Hobby Shop hydraulic leak. Repair: designing removal of soil process.

7i.

Do the results of any radiological surveys conducted indicate limitations on future land use? Explain below.	NO
--	----

7j. Have any base operations or development plans been restricted due to Installation Restoration considerations?

NONE

(R)

7k. List any other hazardous waste treatment or disposal facilities not included in question 7b. above. Include capacity, restrictions, and permit conditions.

NONE

(R)

Revised pg

Do the results of any radiological surveys conducted indicate limitations on future land use? Explain below.	NO
--	-----------

8. LAND / AIR / WATER USE

8a. List the acreage of each real estate component controlled or managed by your base (e.g., Main Base - 1,200 acres, Outlying Field - 200 acres, Remote Range - 1,000 acres, remote antenna site - 5 acres, Off-Base Housing Area - 25 acres).

Parcel Descriptor	Acres	Location
POMFLANT operations and storage and Marine Barracks	5,185	Northside
Menriv Housing and community support facilities and Marrington recreation facilities	2,957	Central
WPNSTA facilities (admin., Ordnance operations and storage, and waterfront facilities) and southside housing	8,160	Southside
WPNSTA South	919	South of Goose Creek
Hunley Park Housing	271	12 miles west of Central

Data Source - WPNSTA Master Plan

8b. Provide the acreage of the land use categories listed in the table below:

LAND USE CATEGORY		ACRES
Total Developed: (administration, operational, housing, recreational, training, etc.)		10,614 *
Total Undeveloped (areas that are left in their natural state but are under specific environmental development constraints, i.e.: wetlands, endangered species, etc.)		Wetlands: 3,523
		All Others:
Total Undeveloped land considered to be without development constraints, but which may have operational/man caused constraints (i.e.: HERO, HERF, HERP, ESQD, AICUZ, etc.) TOTAL		977
Total Undeveloped land considered to be without development constraints		1,691
Total Off-base lands held for easements/lease for specific purposes (for ESQD arc)		416
Breakout of undeveloped, restricted areas. Some restricted areas may overlap:	ESQD	977
	HERF	0
	HERP	0
	HERO	0
	AICUZ	0
	Airfield Safety Criteria	0
	Other	0

* ESQD arcs encumber much for these acres; however, further compatible operations can be accommodated within this acreage. An additional 977 acres are restricted due to ESQD acres but are not considered developed.

NOTE: Undeveloped constrained areas are reported as either environmentally or man caused constrained. Categories are mutually exclusive.

8c. How many acres on your base (includes off base sites) are dedicated for training purposes (e.g., vehicular, earth moving, mobilization)? This does not include buildings or interior small arms ranges used for training purposes.

11.5 acres

Data Source: WPNSTA general development maps dtd 16 Sep 90 & WPNSTA Master Plan dtd Oct 88

8d. What is the date of your last AICUZ update? ____/____/____ Are any waivers of airfield safety criteria in effect on your base? Y/N Summarize the conditions of the waivers below.

N/A

8e. List the off-base land use *types* (e.g, residential, industrial, agricultural) and *acreage* within Noise Zones 2 & 3 generated by your flight operations and whether it is compatible/incompatible with AICUZ guidelines on land use.

Acreage/Location/ID	Zones 2 or 3	Land Use	Compatible/ Incompatible
N/A			

8f. List the navigational channels and berthing areas controlled by your base which require maintenance dredging? Include the frequency, volume, current project depth, and costs of the maintenance requirement.

Navigational Channels/ Berthing Areas	Location / Description	Maintenance Dredging Requirement			
		Frequency	Volume (MCY)	Current Project Depth (FT)	Cost (\$M)
NWS channel & waterfront facilities	Cooper River Charleston, SC	1 / year	500K CY	37 FT - 42 FT	\$675K

Data Source: WPNSTA Charleston maps and Master Plan

Revised pg

8g. Summarize planned projects through FY 97 requiring new channel or berthing area dredged depths, include location, volume and depth.

US Army's Strategic Mobility Logistics Base (SMLB) Program

Location: NWS channel & waterfront facilities (Cooper River, Charleston, SC)

Volume: 1,025,000 CY

Dredged depth: 42 FT

(R)

Data Source: WPNSTA Charleston budget plans & the Army Corps of Engineers

8h.

Are there available designated dredge disposal areas for maintenance dredging material? List location, remaining capacity, and future limitations.	YES. NWS & Yellowhouse Creek disposal areas (Cooper River) 50+ yr economic life 28 mil cy comb. capacity
Are there available designated dredge disposal areas for new dredge material? List location, remaining capacity, and future limitations.	Yes. Same as above with similar capacity.
Are the dredged materials considered contaminated? List known contaminants.	No.

Data Source: **Proposed Army Strategic Mobility Program.**

8.i. List any requirements or constraints resulting from consistency with State Coastal Zone Management Plans.

All activities must meet the requirements of South Carolina's Coastal Zone Management Program (SC CZMP)

Data Source: **SC CZMP**

8j. Describe any non-point source pollution problems affecting water quality ,e.g.: coastal erosion.

None

8g. Summarize planned projects through FY 97 requiring new channel or berthing area dredged depths, include location, volume and depth.

Army Strategic Mobility Program

Location: NWS channel & waterfront facilities (Cooper River, Charleston, SC)

Volume: 1,025,000 CY

Dredged depth: 42 FT

Data Source: WPNSTA Charleston budget plans & the Army Corps of Engineers

8h.

<p>Are there available designated dredge disposal areas for maintenance dredging material? List location, remaining capacity, and future limitations.</p>	<p>YES. NWS & Yellowhouse Creek disposal areas (Cooper River) 50+ yr economic life 28 mil cy comb. capacity</p>
<p>Are there available designated dredge disposal areas for new dredge material? List location, remaining capacity, and future limitations.</p>	<p>Yes. Same as above with similar capacity.</p>
<p>Are the dredged materials considered contaminated? List known contaminants.</p>	<p>No.</p>

Data Source: Proposed Army Strategic Mobility Program.

8.i. List any requirements or constraints resulting from consistency with State Coastal Zone Management Plans.

All activities must meet the requirements of South Carolina's Coastal Zone Management Program (SC CZMP)

Data Source: SC CZMP

8j. Describe any non-point source pollution problems affecting water quality ,e.g.: coastal erosion.

None

8k.

If the base has a cooperative agreement with the US Fish and Wildlife Service and/or the State Fish and Game Department for conducting a hunting and fishing program, does the agreement or these resources constrain either current or future operations or activities? Explain the nature and extent of restrictions.	YES/NO N/A
---	-------------------

8l. List any other areas on your base which are indicated as protected or preserved habitat other than threatened/endangered species that have been listed in Section 1. List the species, whether or not treated, and the acres protected/preserved.

None

9. WRAPUP

9a. Are there existing or potential environmental showstoppers that have affected or will affect the accomplishment of the installation mission that have not been covered in the previous 8 questions?

NO

9b. Are there any ~~other~~ environmental permits required for base operations, include any relating to industrial operations.

YES

Underground Stowage Tanks-	Construction & Operating Permits
Drinking Water Systems-	Construction & Operating Permits
Waste Water Systems-	Construction & Operating Permits
Ground Water Monitoring Wells-	Construction Permits
Wetlands fill permits	
Solid Waste disposal permit	

9c. Describe any other environmental or encroachment restrictions on base property not covered in the previous 8 sections.

None

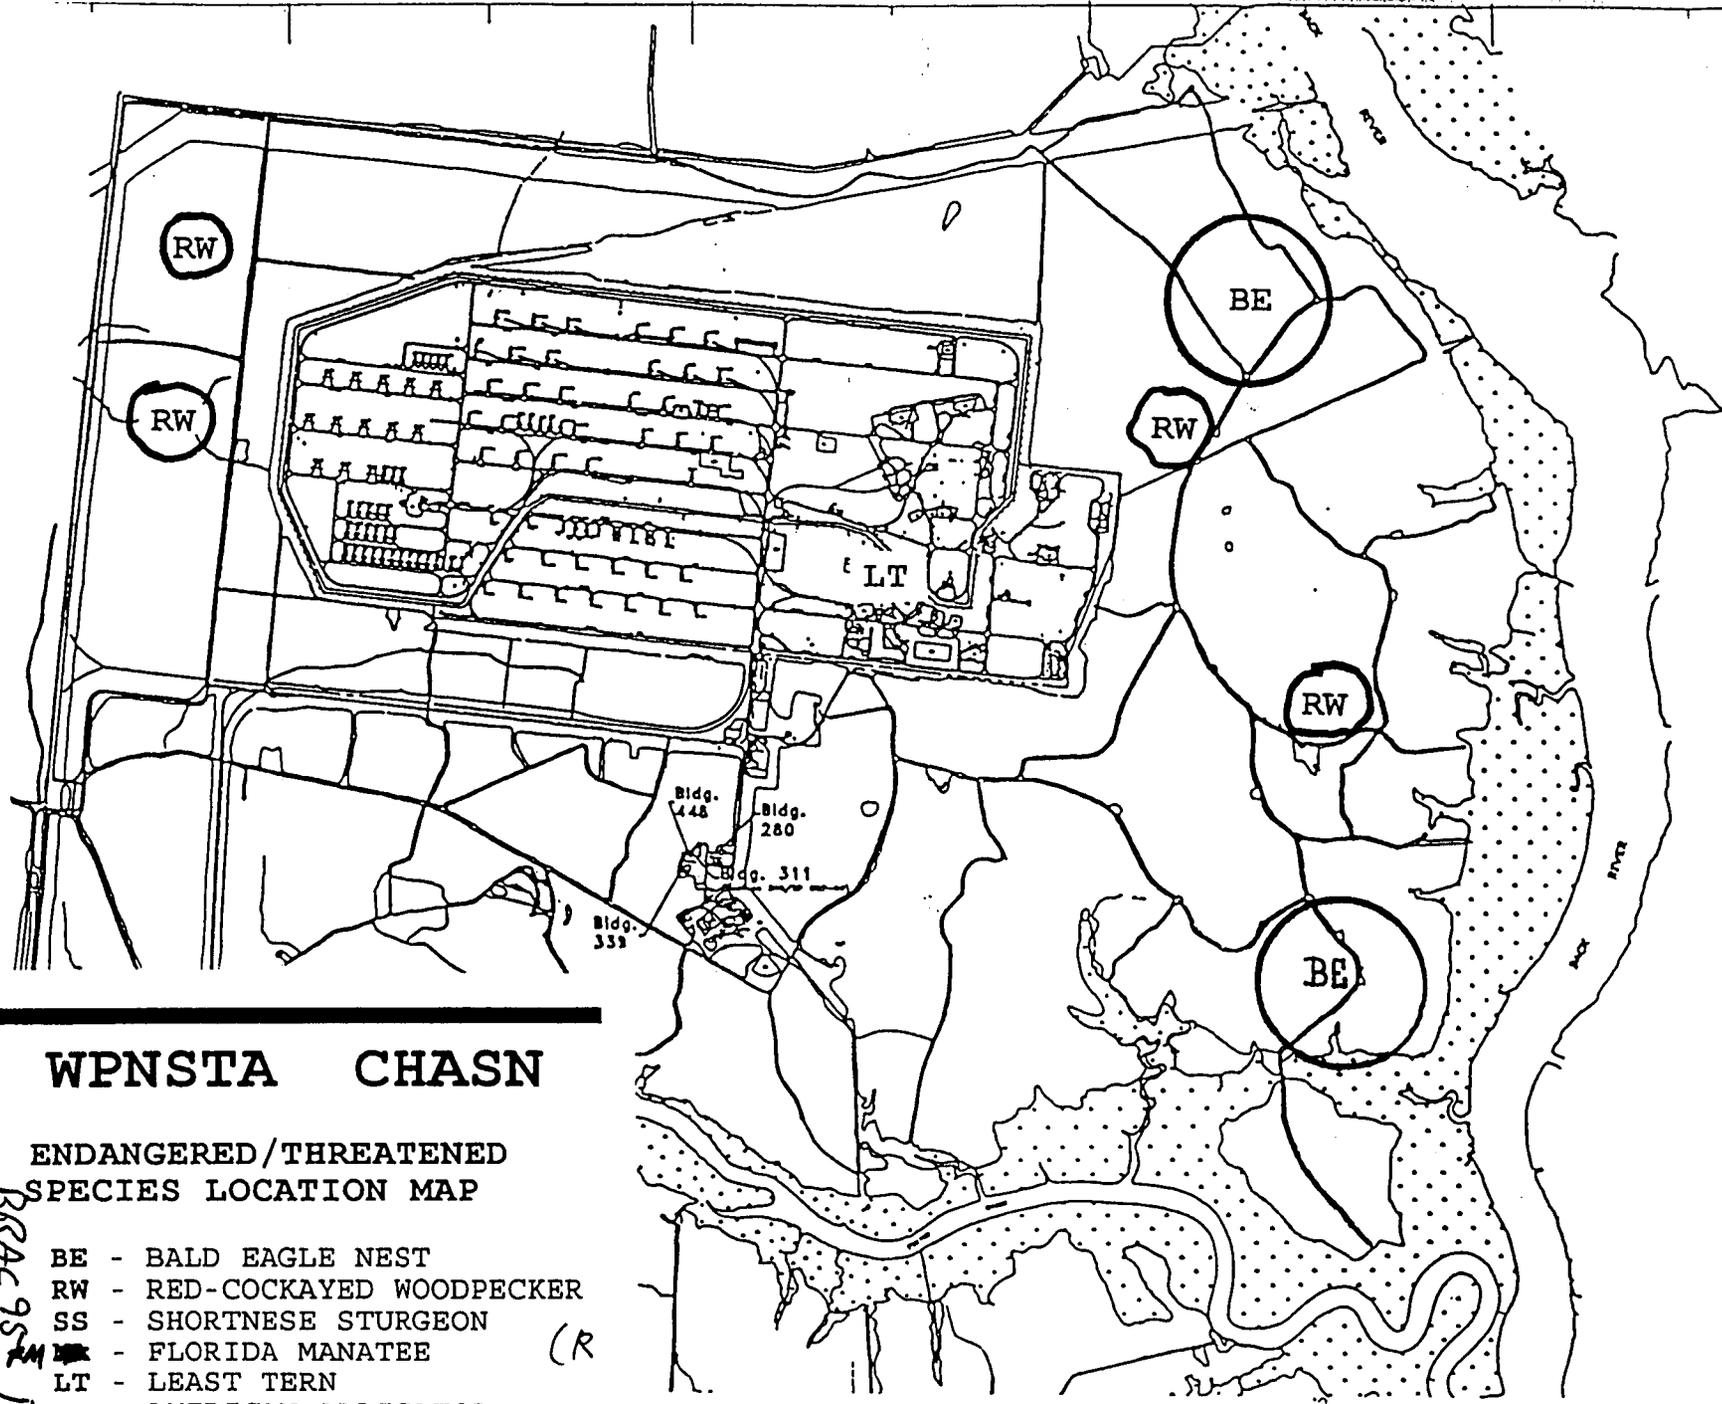

9d. List any future/proposed laws/regulations or any proposed laws/regulations which will constrain base operations or development plans in any way. Explain.

None

3.0 EMISSIONS INVENTORIES

The spreadsheets presented in Appendices B, C and D contain point source information necessary to calculate emissions and/or determine compliance with regulatory requirements. This information was gathered during site visits and/or subsequent communications with NWS Charleston personnel.

Emissions calculated in the spreadsheets are based upon either U.S. Environmental Protection Agency (EPA) approved emissions factors or mass balance calculations. The most frequently utilized EPA source was Supplement E to Compilation of Air Pollutant Emission Factors, commonly referred to as AP-42. The Air Facility Subsystem, Source Classification Codes and Emissions Factor Listing for Criteria, Air Pollutants (EPA Document No. 450/4-90-003), and the Toxic Air Pollutant Emission Factors - A Compilation for Selected Air Toxics Compounds and Sources (EPA Document No. 450/2-88-062) were also used as sources of emission factors. The former is generally referred to as Airs Subsystem and the latter is referred to throughout this document as XATEF. XATEF is the term used to refer to the computer data base that corresponds with the hard copy of the emission factor data base.

As a general rule, the non-hazardous air pollution factors were either obtained from the AP-42 or Airs Subsystem, and the HAP emission factors were obtained from XATEF. Every effort has been made to quantify even the slightest emissions of a HAP by searching the XATEF data base, which is updated periodically from the EPA complex at Research Triangle Park in North Carolina.

The type of calculation method used and/or specific emission factors are shown on Tables C-1, C-2 and C-3. Specific emission factors are often not available for some sources such as solvent degreasing and surface coating operations. These sources utilize many different types of materials from numerous

manufacturers, and development of emission factors is not practical. Material Safety Data Sheets (MSDS) were collected for the materials used in these types of operations, and emissions are calculated based upon the data given for usage of these materials by NWS Charleston personnel.

The first column on all tables in Appendix B contains the Source ID. The Source ID is used throughout this report to reference a particular source. The SCDHEC ID is shown in the second column to assist NWS Charleston personnel in future cross referencing of sources. SCDHEC prefers that a facility use the same source identification on all correspondence with SCDHEC.

A "Scope of Work List" for NWS Charleston was included as part of the original contract with SOUTHDIV. The third column in Appendix B shows the Scope of Work ID Number. An entry of "Added" indicates that this is a source which is not included in the original scope of work but has been included in this study. The last column in Appendix B indicates whether the source is permitted and its status with respect to exemption and/or permitting criteria. The final decision regarding compliance has to be made by SCDHEC. A search of SCDHEC files for NWS Charleston indicated that some air permits have been issued to and some air permits are pending for NWS Charleston (re: Table 2.2-1). A "Yes" entry in the first position of the permitted column in Appendix B indicates that a permit has been issued or is pending.

For the purposes of this report, it is necessary to establish some point at which it is of no use to quantify emissions. The limits set by Federal and State regulatory agencies (i.e., U.S. EPA and SCDHEC) that trigger permitting requirements are almost always given in tons per year (tpy). The limit for being classified as a "major source" established in the EPA/SCDHEC Title V permitting program

5801\5801.01\CHASNWS.01

(re: Section 2.2) for the Charleston area, which is an attainment area for ozone and all other criteria pollutants, is 100 tons per year for criteria pollutants [carbon monoxide (CO), lead, oxides of nitrogen (NO_x), particulate matter (PM), sulfur dioxide (SO₂), and volatile organic compounds (VOC)] (re: Code of Federal Regulations, 40 CFR 70.2). The limits for being classified as a "major source" based upon HAP emissions are 10 tons per year of any single HAP or 25 tons per year of any combination of HAP (re: Code of Federal Regulations, 40 CFR 70.2). SCDHEC regulations 61-62.1(II.F.2.g) and (II.F.2.h), establish one pound per hour and one thousand pounds per month as exemption criteria for emission sources. Based upon these limits set forth by EPA and SCDHEC, it can be reasonably argued that an emission source quantified to be only one pound per year could be considered a "negligible emission" source.

Throughout this report, we have carried out all emissions values in the "tons per year" column to three decimal places. For example, a value of "0.001 tons per year" in one of the tables in Appendix D represents two pounds per year [(0.001 tons/yr) x (2000 lb/ton) = 2.0 lb/yr]. Similarly, a value of "0.0005 tons per year" would represent exactly one pound per year. However, the "0.0005 tons per year" value would be rounded to indicate "0.001 tons per year" in the tables in Appendix D. Any value less than 0.0005 tons per year (i.e., less than one pound per year) would be indicated on the Appendix D tables as "0.000 tons per year". Therefore, by allowing the Appendix D tables to only indicate three decimal places, emissions below one pound per year are not quantified. However, these "negligible emissions" are still included in the emission summations at the bottom of the tables in Appendix D.

Based upon the information given above, it would take approximately two thousand "negligible emission" sources to reach one percent of the allowable limits for criteria pollutants [(2000 sources) x

(0.0005 ton/source) = 1.0 ton per year]. Similarly, two thousand sources emitting a single HAP would only make up ten percent of the allowable emissions from HAP's to still be classified as a "minor source" (re: "major source" definition in Section 2.2). It would take approximately 12,000 "one pound per year" sources [(12,000 sources) x (0.0005 ton/source) x (2000 lb/ton) = 12,000 pounds per year] to exceed the exemption limits of SC R61-62.1(II.F.2.g) and (II.F.2.h). Therefore, any sources showing 0.000 tons per year or indicated to have "negligible emissions" by the acronym "NE" in the tables in the appendices can be considered to emit less than one pound per year.

3.1 FUEL BURNING SOURCES

External combustion fuel-burning equipment at NWS Charleston burns either natural gas or Fuel Oil No. 2 as fuel. Rated input capacities of boilers in million Btu's per hour are shown in Table B-1. Rated fuel usage is shown to the left of this column. Some boilers are equipped to burn both natural gas and Fuel Oil No. 2. To determine which fuel is used for a boiler with two fuel usage ratings, refer to the "Actual Operation (hr/yr)" column. The non-zero entry indicates usage of the corresponding fuel for that particular boiler.

All boiler emissions, with the exception of formaldehyde, are calculated according to AP-42 emission factors. Formaldehyde emissions are based upon XATEF factors. Formaldehyde emissions for Fuel Oil No. 2 are calculated using an emission factor expressed as pounds per million Btu. The emission factors for natural gas and Fuel Oil No. 2 are shown in Table C-1.

In estimating the actual emissions from boilers, the following algorithms were used:

$$E_p = (U * f) / 10^6 \quad (3.1-1) \text{ natural gas}$$

$$E_p = (U * f) / 10^3 \quad (3.1-2) \text{ Fuel Oil No. 2}$$

$$E_{form} = C * f_{form} \quad (3.1-3) \text{ Fuel Oil No. 2}$$

$$E'_p = (E_p * H) / 2000 \quad (3.1-4) \text{ natural gas \& Fuel Oil No. 2}$$

- where: E_p = emission rate for pollutant p (lb/hr);
- E_{form} = emission rate for formaldehyde (lb/hr), Fuel Oil No. 2 only;
- E'_p = emission rate for pollutant p (tpy);
- U = average annual fuel usage
- natural gas - cubic feet per hour (cfh)
- Fuel Oil No. 2 - gallons per hour (gph);
- f = appropriate AP-42 emission factor for pollutant and fuel
- re: Table C-1
- natural gas - pounds per million cubic feet (lb/MMft³)
- Fuel Oil No. 2 - pounds per thousand gallons (lb/kgal);
- C = input capacity, million Btu per hour (MMBtu/hr);
- H = operating time (hr/yr);
- 10⁶ = unit proportionality constant;
- 10³ = unit proportionality constant;
- 2000 = conversion factor of pound to tons.

Potential hours of operation are based upon item five (5) of letter to Rudy Powell, Davis & Floyd, Inc. from M. Darrell Thornley, SOUTHDIV, ref: 5090, Code 1836, 27 Apr 1993.

Boilers used for comfort heating are assumed to have potential hours of operation of 5040 per year. Boilers used for steam, hot water and other non-seasonal applications are assumed to have potential hours of operation of 8760 hours per year. Conservative estimates of the maximum percentage of time that boilers would actually fire and thus be burning fuel are 40 percent for comfort heating and 50 percent for nonseasonal applications. Therefore, maximum potential time of operation for boilers used for comfort heating is 2016 hours per year, and for boilers used for nonseasonal applications is 4368 hours per year. ("Operation" in Table B-1 and Section 3.1 is defined as burner operation.)

Example Calculation - Natural Gas:

Given: 2.09 MMBtu/hr boiler (Source ID F1)

natural gas usage = 1994.0 cfh

actual operating time = 1680 hr/yr

potential operating time = 2016 hr/yr

emission factor = 3.00 lb/MMft³ (Table C-1)

Find: emission rate for particulate matter (PM), lb/hr

actual emission rate for particulate matter (PM), tpy

potential emission rate for particulate matter (PM), tpy

Using equations 3.1-1 and 3.1-4:

$$E_{PM} = (1994 \text{ ft}^3 / \text{hr}) * (3 \text{ lb} / \text{MMft}^3) / (10^6 \text{ ft}^3 / \text{MMft}^3)$$

$$= 0.006 \text{ lb/hr}$$

$$E'_{PM} = (0.006 \text{ lb / hr}) * (1680 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.005 \text{ tpy (actual)}$$

$$E'_{PM} = (0.006 \text{ lb / hr}) * (2016 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.006 \text{ tpy (potential)}$$

Example Calculation - Fuel Oil No. 2:

Given: 1.675 MMBtu/hr boiler (Source ID F4)
 actual operating time = 125 hr/yr
 potential operating time = 4368 hr/yr
 emission factor for formaldehyde = 405/E6 lb/MMBtu (Table C-1)
 = 0.000405 lb/MMBtu

Find: actual emission rate for formaldehyde, lb/hr
 actual emission rate for formaldehyde, tpy
 potential emission rate for formaldehyde, tpy

Using equations 3.1-3 and 3.1-4:

$$E'_{form} = (1.675 \text{ MMBtu/hr}) * (0.000405 \text{ lb/MMBtu})$$

$$= 0.0007 \text{ lb/hr}$$

$$E'_{form} = (0.0007 \text{ lb / hr}) * (125 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.000 \text{ tpy (actual)}$$

$$E'_{form} = (0.0007 \text{ lb / hr}) * (4368 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

= 0.001 tpy (potential)

Table D-1 summarizes the actual and potential emissions for all external combustion fuel-burning equipment.

3.2 STATIONARY INTERNAL COMBUSTION ENGINE

All SICE at NWS Charleston burn Fuel Oil No. 2. Most of these sources are stationary generators. Portable generators are marked with an asterisk (*) on Table B-2. There are also three fire pumps listed on Table B-2. The rated capacities of these sources range from 6 kilowatts (kW) to 1050 kW and are shown on Table B-2.

Most generators are tested for thirty minutes every week, which translates to an actual operating time of 26 hours per year. Unless data indicated otherwise, 26 hours per year was assumed as actual operating time for these sources. Actual annual operating hours are shown on Table B-2.

SCDHEC indicated that 250 hours per year would be a reasonable potential operation time for SICE which are only in use while being tested (re: Memorandum, W. D. Few of Davis & Floyd, Inc. telephone conversation with Robert Wood of SCDHEC - 23 August 1993 in Appendix A). For SICE sources which operate regularly for other purposes, the potential operation time is shown as 1000 hours per year. Generators which have been permitted by SCDHEC may be operated with the permit condition that time of usage does not exceed 1000 hours per year per generator.

As a general rule, data for SICE stack velocities and temperatures was difficult to obtain. This data should be available in the owner manuals and/or operating specifications for the various generator units in use. Data in these manuals is based upon the percentage of the total load capacity that the unit is expected to operate, which is usually 80 percent of capacity. Many of the units identified are old and owner manuals were not available at the activity and are difficult to obtain from manufacturers. Due to the difficulty in obtaining this data from the numerous manufacturers of generator sets at SOUTHDIV facilities, equations have been developed to calculate this data as a function of the rated kilowatt capacity of the units.

The stack temperature and velocity of SICE units are dependent upon several variables. The primary consideration, apart from the capacity of the unit, is the load placed on the unit when running. Other factors affecting temperature and velocity values are the air-fuel ratio, and the type of fuel used in the unit. Considering the potential variability of the factors which may affect the stack temperature and velocity, specifically the load applied, development of the equations presented below was the only reasonable means of determining these values.

The equations developed to estimate SICE stack temperature and velocity were derived by gathering current data from several major generator manufacturers (Onan, Kohler, Olympian, and Caterpillar). Stack velocities are a function of the SICE's exhaust flow rate (EFR) and the diameter of the exhaust stack. The data was organized according to kilowatt capacities, and average values for temperature and EFR were calculated for each group of equivalent kilowatt capacities. These average values were then plotted with the temperature and exhaust flow rate on the Y-axis and the kilowatt capacity of the SICE on the X-axis. Once the graphs were

drawn, equations were developed by analyzing the sloping trends of the curves and comparing the values given from the formulas to the data used to develop the graphs.

The equations applied for calculation of EFR are as follows:

For rated kilowatt capacity less than 300 kW:

$$\text{EFR} = 9.95 * (\text{KW}) + 15 \quad (3.2-1)$$

For rated kilowatt capacity greater than 300 kW:

$$\text{EFR} = 6.667 * (\text{KW}) + 1000 \quad (3.2-2)$$

The equations applied for calculation of exhaust gas temperature are as follows:

For rated kilowatt capacity less than 500 kW:

$$\text{EGT} = -0.20 * (\text{KW}) + 1050 \quad (3.2-3)$$

For rated kilowatt capacity greater than 500 kW:

$$\text{EGT} = -0.067 * (\text{KW}) + 983.3 \quad (3.2-4)$$

Exhaust gas velocity may be calculated using the following equation:

$$\text{EGV} = \text{EFR} / (\text{AREA} * 60) \quad (3.2-5)$$

where:

EFR = Exhaust gas flow rate, cubic feet per minute (cfm);

EGT = Exhaust gas temperature, degrees Fahrenheit (°F);

EGV = Exhaust gas velocity, feet per second (fps);

- KW = Rated output capacity of unit, kilowatts (kW);
- AREA = Cross-sectional area of stack, square feet (ft²)
 = $3.1416 * (d/2)^2$ where d = equivalent diameter of stack, ft;
- 60 = conversion factor of minutes to seconds.
- 3.1416 = pi (ratio of circle's circumference to its diameter)

Example Calculation:

Given: Generator capacity = 125 kW (Source ID E2)
 Stack diameter = 0.21 ft

Find: exhaust gas temperature, °F
 exhaust gas velocity, fps

Using equations 3.2-3, 3.2-1 and 3.2-5:

$$\text{EGT} = (-0.20 * 125) + 1050 = 1025 \text{ } ^\circ\text{F}$$

$$\text{EFR} = (9.95 * 125) + 15 = 1259 \text{ cfm}$$

$$\text{EGV} = (1259 \text{ ft}^3/\text{min}) / ((3.1416 * (0.21 \text{ ft}/2)^2) * 60 \text{ sec}/\text{min}) = 606 \text{ fps}$$

Emission factors for SICE derived from AP-42 are shown in Table C-1. Emission factors are a function of SICE capacity and are expressed as grams per kilowatt-hour. Emission factors

from Table C-1, and rated capacity and actual annual operating hours from Table B-2, were used to calculate actual emissions with the following algorithms:

$$E_p = (U * f) / 454 \tag{3.2-6}$$

$$E'_p = (E_p * H) / 2000 \tag{3.2-7}$$

- where: E_p = emission rate for pollutant p, pounds per hour (lb/hr);
 E'_p = emission rate for pollutant p, tons per year (tpy);
 U = generator capacity, kilowatts (kW);
 f = appropriate AP-42 emission factor for pollutant, grams per kilowatt-hour (g/kWh), re: Table C-1;
 H = estimated operating time, hours per year (hr/yr);
454 = conversion factor of grams to pounds;
2000 = conversion factor of pound to tons

Example Calculation:

- Given: 125.0 kW generator (Source ID E1)
actual operating time = 26 hr/yr
potential operating time = 250 hr/yr
emission factor for PM = 1.34 g/kWh (Table C-1)

- Find: emission rate for PM, lb/hr

actual emission rate for PM, tpy

potential emission rate for PM, tpy

Using equations 3.2-6 and 3.2-7:

$$\begin{aligned} E_{PM} &= (125 \text{ kW}) * (1.34 \text{ g / kWh}) / (454 \text{ g / lb}) \\ &= 0.369 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{PM} &= (0.369 \text{ lb / hr}) * (26 \text{ hr / yr}) / (2000 \text{ lb / ton}) \\ &= 0.005 \text{ tpy (actual)} \end{aligned}$$

$$\begin{aligned} E'_{PM} &= (0.369 \text{ lb / hr}) * (250 \text{ hr / yr}) / (2000 \text{ lb / ton}) \\ &= 0.046 \text{ tpy (potential)} \end{aligned}$$

Table C-1 indicates that the pound per hour emission rate for SO₂ should be calculated by mass balance for any SICE with an output capacity greater than or equal to 447 kW. AP-42 further states that all sulfur in the fuel should be assumed to be converted to SO₂. Fuel Oil No. 2 at NWS Charleston contains 0.5 mass percent sulfur. Equation 3.2-8 is used to calculate the pound per hour emission rate based upon the input capacity of the SICE and an engine efficiency of 60 percent. (Actual and potential emission rates expressed as tons per year may then be calculated using equation 3.2-7.)

$$E_p = (KW * 3414 * 0.005 * 2) / (0.6 * 19460) \quad (3.2-8)$$

where:

$$E_p = \text{emission rate for pollutant (lb/hr);}$$

- KW = rated output capacity of SICE (kW);
- 3414 = conversion factor, Btu to kWh;
- 0.005 = mass fraction of sulfur in fuel, dimensionless;
- 2 = conversion factor, pounds of sulfur to pounds of sulfur dioxide;
- 0.6 = efficiency of engine (fraction);
- 19,460 = heat content of Fuel Oil No. 2 (Btu/lb);
- 2000 = conversion factor, lb to ton.

Example Calculation:

Given: 750 kW generator (Source ID E18)

Find: emission rate for SO₂, lb/hr

Using equation 3.2-8:

$$\begin{aligned}
 E_{SO_2} &= (750 \text{ kW}) * (3414 \text{ Btu} / \text{kWh} \times 0.005 \times 2) / (0.6 \times \\
 &\quad 19460 \text{ Btu} / \text{lb}) \\
 &= 2.193 \text{ lb/hr}
 \end{aligned}$$

Table D-2 summarizes actual and potential emissions from stationary internal combustion sources at NWS Charleston.

3.3 SURFACE COATING OPERATIONS

Surface coating operations at NWS Charleston are identified in Table B-3, the parent material information used to calculate emissions is presented in Table C-2, and emissions are summarized in Table D-3. Over 99% of the material used in surface coating operations at NWS Charleston is applied in paint booths. The only fugitive source being 5 gallons of open painting taking place at Building 2.

All of the paint booths are equipped with filters, which have particulate removal efficiencies ranging from 90-95 percent. The typical application efficiency of a spraying operation is 40 percent (AP-42, 1982). Therefore, a 60 percent overspray has been assumed for all spraying operations for the purposes of calculating particulate emissions. No VOC controls (i.e., after-burners, carbon adsorption, etc.) are present on any of the paint booths. Therefore, the total amount of VOC in a surface coating material are assumed to be released to the atmosphere. Generally, most of the VOC emissions occur during the application and drying process.

The following equations are used to calculate emissions from surface coating operations at NWS Charleston:

$$E_{\text{voc}} = (U * V_c) / H \quad (3.3-1)$$

$$E'_{\text{voc}} = E_{\text{voc}} * H / 2000 \quad (3.3-2)$$

$$E_{\text{pm}} = (U * D * PM_c * O * (1 - N)) / H \quad (3.3-3)$$

$$E'_{\text{pm}} = E_{\text{pm}} * H / 2000 \quad (3.3-4)$$

$$E_{\text{vhap}} = E_{\text{voc}} * (V_{\text{hap}} / 100) \quad (3.3-5)$$

3.16

$$E_{phap} = E_{pm} * (PM_{hap} / 100) \quad (3.3-6)$$

$$E'_{vhap} = E_{vhap} * H / 2000 \quad (3.3-7)$$

$$E'_{phap} = E_{phap} * H / 2000 \quad (3.3-8)$$

- where:
- E_{voc} = VOC emission rate (lb/hr);
 - E'_{voc} = VOC emission rate (tpy);
 - E_{pm} = Particulate matter emission rate (lb/hr);
 - H = Annual operating hours (hr/yr);
 - U = Annual material usage (gpy);
 - D = Material density (lb/gal);
 - V_c = VOC content (lb/gal);
 - PM_c = Particulate matter content (weight percent/100);
 - O = Overspray (%/100);
 - N = Control efficiency (%/100);
 - 2000 = Conversion factor, pounds to ton;
 - PM_{hap} = Percentage of PM that is hazardous (%);
 - V_{hap} = Percentage of VOC that is hazardous (%).

Example Calculation:

Given: Paint spray booth in Building 86 (Source ID-S3)

Ultrabase basecoat paint usage, U = 25 gpy

Annual operating hours, H = 2080 hr/yr

Find: Emissions of non-hazardous VOC and PM.

The MSDS for Ultrabase basecoat gives the following information which can be found in Table

C-2:

$$D = 8.6 \text{ lb/gal}$$

$$V_c = 6.45 \text{ lb/gal}$$

$$PM_c = 0.25$$

Using equations 3.3-1 and 3.3-2:

$$\begin{aligned} E_{\text{voc}} &= (25 \text{ gal/yr}) * (6.45 \text{ lb/gal}) / (2080 \text{ hr/yr}) \\ &= 0.078 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{\text{voc}} &= (0.078 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.081 \text{ ton/yr} \end{aligned}$$

Using equations 3.3-3 and 3.3-4:

$$\begin{aligned} E_{\text{pm}} &= (25 \text{ gal/yr}) * (8.6 \text{ lb/gal}) * (0.25) * (0.60) * (1-0.95) / (2080 \text{ hr/yr}) \\ &= 0.001 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{\text{pm}} &= (0.001 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.001 \text{ ton/yr} \end{aligned}$$

Find: Emissions of HAP VOC and PM.

Using the information from the MSDS presented in Table C-2:

$$PM_{\text{hap}} = 46$$

$$V_{\text{hap}} = 54.7$$

Using equations 3.3-5 and 3.3-7:

$$\begin{aligned} E_{\text{vhap}} &= (0.078 \text{ lb/hr}) * (54.7) / (100) \\ &= 0.043 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{\text{vhap}} &= (0.043 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.044 \text{ ton/yr} \end{aligned}$$

Using equations 3.3-6 and 3.3-8:

$$\begin{aligned} E_{\text{phap}} &= (0.001 \text{ lb/hr}) * (46/100) \\ &= 0.0004 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{\text{phap}} &= (0.0004 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.0004 \text{ ton/yr} \end{aligned}$$

To calculate total HAP emissions and potential emissions of VOC, PM, and HAP, the following algorithms are applied:

$$E_{\text{thap}} = E_{\text{vhap}} + E_{\text{phap}} \quad (3.3-9)$$

$$E'_{\text{thap}} = E'_{\text{vhap}} + E'_{\text{phap}} \quad (3.3-10)$$

$$PE'_{\text{voc}} = E'_{\text{voc}} * H_p / 2000 \quad (3.3-11)$$

$$PE'_{\text{pm}} = E'_{\text{pm}} * H_p / 2000 \quad (3.3-12)$$

$$PE'_{\text{thap}} = E'_{\text{thap}} * H_p / 2000 \quad (3.3-13)$$

- where: E_{thap} = total HAP emission rate (lb/hr);
 E'_{thap} = total HAP emission rate (tpy);
 PE'_{voc} = VOC potential emissions (tpy);
 PE'_{pm} = PM potential emissions (tpy);
 PE'_{thap} = total HAP emission rate (tpy);
 H_p = potential hours of operation (hr/yr).

Example Calculation:

Given: Paint spray booth in Building 86 (Source ID-S3)

Ultrabase basecoat paint usage, $U = 25$ gpy

Annual operating hours, $H_p = 8736$ hr/yr

Find: Total HAP actual and potential emissions.

Using equations 3.3-9, 3.3-10, and 3.3-13:

$$\begin{aligned}
 E_{thap} &= (0.0424 \text{ lb/hr}) + (0.0004 \text{ lb/hr}) \\
 &= 0.0428 \text{ lb/hr} \\
 E'_{thap} &= (0.0441 \text{ ton/yr}) + (0.004 \text{ ton/yr}) \\
 &= 0.044 \text{ ton/yr} \\
 PE'_{thap} &= (0.0428 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\
 &= 0.044 \text{ ton/yr}
 \end{aligned}$$

Find: Non-HAP VOC and PM potential emissions.

Using equations 3.3-11 and 3.3-12:

$$\begin{aligned} PE'_{\text{voc}} &= (0.078 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.081 \text{ ton/yr} \end{aligned}$$

$$\begin{aligned} PE'_{\text{pm}} &= (0.001 \text{ lb/hr}) * (2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.001 \text{ ton/yr} \end{aligned}$$

Specific HAP emissions presented in Table D-7A from surface coating operations are calculated by multiplying the HAP-VOC and HAP-PM emissions by the percentage of those rates that represent the specific HAP.

3.4 SOLVENT USE SOURCES

Emissions from solvent operations were calculated by using mass balance principles and VOC percentages obtained from appropriate material data and safety sheets (MSDS). VOC emissions from solvent use processes at NWS Charleston have been calculated under the conservative assumption that all of the volatile solvent utilized is released to the atmosphere. The MSDS for the two types of solvents used at NWS Charleston, PD-680 Type I and Safety Kleen 105 Solvent, indicate the presence of a small amount of HAP. Safety Kleen's Solvent 105 consists of 85 percent mineral spirits, 12% "C8+ Aromatics", 1 percent xylene, 0.5 % ethylbenzene, 0.5 percent toluene, 0.5 percent 1,1,1-trichloroethane, and 0.5 perchloroethylene. "PD680A, Type I" consists of 99.9+ percent petroleum distillates. Therefore, solvent emissions will consist primarily of non-HAP, non-exempt VOC's.

3.21

Solvent use emissions have been calculated according to the following algorithms:

$$E_{\text{voc}} = (U * V_c) / H \quad (3.4-1)$$

$$E'_{\text{voc}} = (E_{\text{voc}} * H) / 2000 \quad (3.4-2)$$

- where: E_{voc} = VOC emission rate (lb/hr);
 V'_{voc} = VOC emission rate (ton/yr);
 V = Annual product usage (gal/yr);
 V_c = VOC content (lb/gal);
 H = Annual operating hours (hr/yr);
2000 = Conversion factor, pounds to tons

Example Calculation:

Given: Degreaser tank Building 37
PD-680, Type I usage, $V = 52$ gal/yr
Annual operating hours, $H = 520$ hr/yr

Find: VOC hourly and annual emission rates.

From the MSDS, we know that PD-680, Type I, is 100% volatile and the product density is 6.50 pounds per gallon. Therefore, $V_c = 6.50$ lb/gal.

Using equations 3.4-1 and 3.4-2:

$$\begin{aligned} E_{\text{voc}} &= (52 \text{ gal/yr}) * (6.49 \text{ lb/gal}) / (520 \text{ hr/yr}) \\ &= 0.649 \text{ lb/hr} \end{aligned}$$

$$\begin{aligned} E'_{\text{voc}} &= (0.649 \text{ lb/hr}) * (520 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.169 \text{ ton/yr} \end{aligned}$$

3.5 GAS STATIONS AND RELATED OPERATIONS

Emissions of non-HAP VOC's from tanks are based upon AP-42, and HAP emissions are based upon XATEF emission factors. These factors are given in terms of pounds per thousand gallons of throughput, and emissions are calculated by multiplying the factor by the annual throughput for the tanks.

The revised EPA AP-42 method, which calculates emissions based upon throughput, has been used to calculate emissions from the tanks presented in Tables B-5 and D-5. Twelve sources have been identified at NWS Charleston for VOC petroleum handling emissions. Weapons Station personnel indicated that three of the sources were duplicates with building numbers referring to fueling islands (See Table B-5). SCDHEC has stated that they are not concerned with storage tank emissions and, therefore, only VOC losses from vehicle refueling operations are presented in Table D-5. Emissions are calculated based upon the following algorithms:

$$E_{\text{voc}} = T * EF / 1000 \quad (3.5-1)$$

$$E'_{\text{voc}} = E_{\text{voc}} / 2000 \quad (3.5-2)$$

Where:

E_{voc}	=	VOC emission rate (lb/hr);
E'_{voc}	=	VOC emission rate (ton/yr);
T	=	Annual fuel throughput (gal/yr);
EF	=	AP-42 emission factor (lb/1000 gal);
1000	=	Conversion factor, thousand gallons to gallons;
2000	=	Conversion factor, pounds to tons.

Example Calculation:

Given: Gas station at Building 922

Annual gasoline throughput, T = 255,000 gal/yr

Find: VOC emission rates from fueling loss.

AP-42, Volume I, Book I, gives an emission factor for working loss of 9.0 pounds per thousand gallons and a spillage loss factor of 0.7 pounds per thousand gallons, combining these factors yields a vehicle refueling emission factor of 9.7 pounds per gallon.

Using Equation 3.5-1 and 3.5-2:

$$\begin{aligned} E_{\text{voc}} &= (255,000 \text{ gal/yr}) * (9.7 \text{ lb/1000 gal}) \\ &= 2,474 \text{ lb/yr} \end{aligned}$$

$$\begin{aligned} E'_{\text{voc}} &= (2,474 \text{ lb/yr}) / (2000 \text{ lb/ton}) \\ &= 1.237 \text{ ton/yr} \end{aligned}$$

Air toxic emissions presented Table D-5A have been calculated in the same manner as VOC

emissions. The toxic emissions do account for emissions from the tanks and not just for vehicle refueling emissions. The factors used for each pollutant are a summation of applicable factors from the XATEF data base for that particular HAP.

3.6 MISCELLANEOUS SOURCES

Table B-6 lists miscellaneous air pollution sources. Sources are arranged by building number/name in numerical/alphabetical order. For each source, the process type and material(s) used are given. Except for fugitive emissions, stack data and type of pollution control device are also given. Despite efforts to determine year of installation for miscellaneous processes at NWS Charleston, almost all entries in the "Year Installed" column contain "NA" (Not Available) due to the fact that no records could be found which showed this information.

Table D-6 shows actual and potential emissions from miscellaneous sources. Potential emissions for miscellaneous sources are based on an operating time of 2080 hours per year, which is equivalent to 8 hours per day, 5 days per week, 52 weeks per year. Table D-6 summarizes the total actual and potential emissions from miscellaneous processes. Emission factors and/or calculation methods used to determine emissions for miscellaneous processes are shown in Table C-1.

Woodworking operations are represented by Source ID Numbers M1, M9, M22, M25, M44 and M67. All woodworking sources except Source ID M9 utilize a cyclone in conjunction with a baghouse to control emissions. As shown in Table C-1, emissions are negligible when a cyclone and baghouse are utilized as control equipment. When calculating emissions for Source

ID M9, the AP-42 emission factor (expressed in pounds of particulate matter per hour of usage) is used.

Pound per hour emission rates for the Wet-X Torpedo Disassembly at Building 79 (Source ID M11, M12, M13 and M14) were provided by NWS Charleston. The AP-42 emission factor for sandblasting operations is also expressed in pounds of particulate matter per hour of usage. The pound per hour values for woodworking, torpedo disassembly and sandblasting are used in Table D-6 as given in Table C-1. Actual and potential emissions expressed in tons per year are calculated using the following algorithm:

$$E'_p = H * f / 2000 \quad (3.6-1)$$

- where: E'_p = emission rate for pollutant p (tpy)
- f = appropriate AP-42 emission factor for pollutant (lb/hr) re: Table C-1
- H = operating time (hr/yr)
- 2000 = conversion factor of pound to tons

Example Calculation:

- Given: actual operating time = 52 hr/yr (Source ID M7)
- potential operating time = 2080 hr/yr
- emission factor for PM for sandblasting = 0.02 lb/hr (Table C-1)

- Find: actual emission rate for PM, tpy
- potential emission rate for PM, tpy

Using equation 3.6-1:

$$\begin{aligned} E'_{PM} &= (52 \text{ hr / yr}) * (0.02 \text{ lb / hr}) / (2000 \text{ lb / ton}) \\ &= 0.001 \text{ tpy (actual)} \end{aligned}$$

$$\begin{aligned} E'_{PM} &= (2080 \text{ hr / yr}) * (2.00 \text{ lb / hr}) / (2000 \text{ lb / ton}) \\ &= 0.021 \text{ tpy (potential)} \end{aligned}$$

Emissions from the Demilitarized Furnace (Source ID M5) consist of nitrous oxides (NO_x), particulate matter (PM), sulfur dioxide (SO₂), VOC, and carbon monoxide (CO). The Demilitarized Furnace has been out of service since December of 1989, but is expected to be used again sometime in 1993. Emissions from this source have been estimated by using either the largest pound per hour values provided in Tables II and III (pages 12 through 14) of the Resource Conservation and Recovery Act (RCRA) permit application [Re: RCRA Part B Hazardous Waste Permit Application, EPA No. SC817002262, Trial Burn Plan, Naval Weapons Station Charleston, SC] or by assigning a conservative emission rate based upon the data provided in the RCRA permit application. The values presented in Tables II and III of the RCRA permit application are based upon stack testing performed in April/May 1987.

No values for CO emissions were identified in the RCRA permit application. However, CO is known to be a product of Fuel Oil #2 combustion, which is the fuel type used to heat the furnace. Therefore, the emission factor to calculate CO emissions from the Demilitarized Furnace is the same as the factor used to calculate CO emissions from Fuel Oil #2 fired boilers (re: Table C-1). The RCRA permit indicates a Fuel Oil #2 firing rate ranging from 3 gallons

per hour to 18 gallons per hour. We have used 18 gallons per hour as a conservative estimate of the Fuel Oil #2 usage rate for this source. Emissions for CO are calculated as shown in Section 3.1 using equations 3.1-2 and 3.1-4.

According to the data presented in the RCRA permit for the 19 different items tested in the trial burn, the range of emission rates for NO_x from the Demilitarized Furnace was from less than 0.13 pounds per hour to 6.72 pounds per hour. The six largest emission rates for NO_x ranged from 4.17 to 6.72 pounds per hour, while the smallest 13 values ranged from less than 0.13 to 0.39 pounds per hour. Based upon this data, we have decided to use a conservative 5.0 pound per hour emission factor to calculate NO_x emissions from the Demilitarized Furnace. Emissions for NO_x are calculated as shown in Section 3.1 using equations 3.1-2 and 3.1-4.

Emissions of PM, SO₂, and VOC have been estimated by using the highest pound per hour values given for these pollutants in Tables II and III of the RCRA permit application. The emission factors, given in pounds per hour, are identified in Table C-1. These values are used in Table D-6 as given in Table C-1. Actual and potential emission rates for PM, SO₂ and VOC are calculated using the following algorithm:

$$E'_p = (f * H) / 2000 \quad (3.6-2)$$

where: E'_p = emission rate for pollutant p (tpy);

f = emission factor for pollutant p (lb/hr), re: table C-1;

H = operating time (hr/yr).

Example Calculation:

Given: Demilitarization furnace (Source ID M5)

actual operating time = 588 hr/yr

potential operating time = 2080 hr/yr

emission factor = 0.376 lb/hr (Table C-1)

Find: actual emission rate for PM, tpy

potential emission rate for PM, tpy

Using equation 3.6-2:

$$\begin{aligned} E'_{pm} &= (0.376 \text{ lb/hr} * 588 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.111 \text{ tpy (actual)} \end{aligned}$$

$$\begin{aligned} E'_{pm} &= (0.376 \text{ lb/hr} * 2080 \text{ hr/yr}) / (2000 \text{ lb/ton}) \\ &= 0.391 \text{ tpy (potential)} \end{aligned}$$

Formaldehyde emissions from the demilitarized furnace are calculated as shown in Section 3.1 using equations 3.1-3 and 3.1-4.

The two incinerators at NWS Charleston are dual-chamber devices using natural gas fuel and incinerating classified paper waste. Screens are installed at the top of the stacks. Emissions from natural gas fuel usage and from waste incineration are presented in Table D-6. In Table C-1, emission factors are based on (1) cubic feet of natural gas burned (from AP-42), and (2) tons of waste burned (from AIRS). Algorithms for calculating emissions from natural gas fuel usage are identical to those presented in Section 3.1 of this report. Emissions resulting from

incineration of classified paper waste are calculated as follows:

$$E'_p = (U * f) / (2000) \quad (3.6-3)$$

$$E_p = (E'_p * 2000) / H \quad (3.6-4)$$

$$EP'_p = (E'_p * HP) / H \quad (3.6-5)$$

- where: E'_p = emission rate for pollutant p (tpy)
- E_p = emission rate for pollutant p (lb/yr)
- U = annual amount of waste burned (tpy)
- f = appropriate AP-42 emission factor for pollutant, pounds per ton burned (lb/ton) re: Table C-1
- H = actual operating time (hr/yr)
- HP = potential operating time (hr/yr)
- 2000 = conversion factor of pound to tons

Example Calculation:

- Given: annual amount burned = 18 tpy (Source ID M15)
- actual operating time = 288 hr/yr
- potential operating time = 2080 hr/yr
- emission factor = 3.3 lb/ton (Table C-1)

- Find: actual emission rate for PM, tpy
- emission rate for PM, lb/hr
- potential emission rate for PM, tpy

Using equations 3.6-3, 3.6-4 and 3.6-5:

$$\begin{aligned}
 E'_{PM} &= (18 \text{ ton burned / yr}) * (3.3 \text{ lb / ton burned}) / (2000 \text{ lb / ton}) \\
 &= 0.0297 \text{ tpy (actual)} \\
 E'_{PM} &= (0.0297 \text{ ton / yr}) * (2000 \text{ lb / ton}) / (288 \text{ hr / yr}) \\
 &= 0.206 \text{ lb/hr} \\
 &= 0.0297 \text{ tpy (actual)} \\
 EP'_{PM} &= (0.0297 \text{ ton / yr}) * (2080 \text{ hr / yr}) / (288 \text{ hr / yr}) \\
 &= 0.214 \text{ tpy (potential)}
 \end{aligned}$$

Welding operations at NWS Charleston are represented by Source ID M6, M8, M24, M38, M46, M61, M65, M68 and M69. Emission factors shown in Table C-1 are used to calculate particulate emissions. Particulate emissions from welding consist of HAP (shown on Table D-6 as "chemical name (PM)") and non-HAP (shown simply as "PM"). The following algorithms are used to calculate emissions from welding:

$$E_p = (U * f) / (H * 2000) \quad (3.6-6)$$

$$E'_p = (E_p * H) / 2000 \quad (3.6-7)$$

where: E_p = emission rate for pollutant p (lb/hr)

E'_p = emission rate for pollutant p (tpy)

U = usage rate of welding material (lb/yr);

f = emission factor for pollutant p, pounds of pollutant p per ton of welding material used (lb/ton), re: Table C-1;

H = operating time (hr/yr)

2000 = conversion factor of pounds to tons

Example Calculation:

Given: Welding at Building 65 (Source ID M6)

usage rate = 1716 lb/yr

actual operating time = 2080 hr/yr

potential operating time = 2080 hr/yr

emission factor for manganese = 0.5 lb Mn/ton rod

Find: emission rate for Mn, lb/hr

actual emission rate for Mn, tpy

potential emission rate for Mn, tpy

Using equations 3.6-6 and 3.6-7:

$$E_p = (1716 \text{ lb rod / yr} * 0.5 \text{ lb Mn / ton rod}) / (2080 \text{ hr / yr} * 2000 \text{ lb rod} / \text{ton rod})$$

$$= 0.0002 \text{ lb Mn/hr}$$

$$E'_p = (0.0002 \text{ lb / hr} * 2080 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.000 \text{ tpy (actual)}$$

$$E''_p = (0.0002 \text{ lb / hr} * 2080 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.000 \text{ tpy (potential)}$$

Mass balance calculations are used to determine emissions when emission factors are unavailable and emissions are known to exist. Mass balance calculations are used to calculate usage and emission rates for Source ID M3 and M73.

Pesticides are mixed at Building 17 (Source ID M3). An annual usage of 240 gallons per year of each pesticide is used. Emissions from the lab fume hood at NPTU are negligible (Source ID M72). Although laboratory facilities are exempt under SCDHEC regulations, emissions from NPTU Lab on Barge (Source ID M73) were calculated by mass balance.

MSDS and other standard reference materials were researched for each of the chemicals' ingredients to determine Chemical Abstract Services (CAS) number, HAP status, volatility, specific gravity/density, and volume/mass percent. It is conservatively assumed that 100 percent of the chemical volatilizes (for VOC) or becomes airborne (for dry products). VOC emissions are classified in Table D-6 as hazardous (shown as "chemical name") or as non-hazardous (shown simply as "VOC"). Similar nomenclature is used to classify particulate emissions (i.e., "chemical name (PM)" or "PM"). Equations used for mass balance emission calculations and examples follow.

$$U_p = (V_p * SG * D) / 7.48 \quad (3.6-8)$$

$$U_{voc} = (U_p * MP_{voc}) / (100) \quad (3.6-9)$$

$$E'_{voc} = (U_{voc}) / (2000) \quad (3.6-10)$$

$$E_{voc} = (E'_{voc} * 2000) / H \quad (3.6-11)$$

$$EP'_{voc} = (E'_{voc} * HP) / H \quad (3.6-12)$$

$$E'_{pm} = U_p / 2000 \quad (3.6-13)$$

$$E_{pm} = (E'_{pm} / 2000) / H \quad (3.6-14)$$

$$EP'_{pm} = (E'_{pm} * HP) / H \quad (3.6-15)$$

where:

- U_p = annual usage of product p, pounds per year (lb/yr)
- U_{voc} = annual usage of volatile organic compound c (lb/yr);
- E'_{voc} = actual emission rate for volatile organic compound c (tpy);
- E_{voc} = emission rate for volatile organic compound c (lb/hr);
- EP'_{voc} = potential emission rate for volatile organic compound (tpy);
- E'_{pm} = actual emission rate for particulate matter for dry product p (tpy);
- E_{pm} = emission rate for particulate matter for dry product p (lb/hr);
- EP'_{pm} = potential emission rate for particulate matter for dry product p (tpy);
- V_p = annual usage of product (gpy);
- SG_p = specific gravity of product, dimensionless;
- D = density of water, pounds per cubic feet, lb/ft³,
 = 62.3/ft³;
- MP_{voc} = mass percent of volatile organic compound in product, dimensionless
 (may represent a non-HAP VOC or a HAP VOC);
- H = estimated operating time (hr/yr);
- 7.48 = conversion factor of gallons to cubic feet;
- 100 = conversion factor of percent to fraction;
- 2000 = conversion factor of pounds to tons (lb/ton).

Example Calculation:

Given: Dursban 4E (Source ID M3 on Table B-6)
 product usage = 240 gpy
 product specific weight = 0.976
 volatile chemical - xylene (CAS number 64742-65-2)
 xylene is classified as an HAP
 xylene mass percent = 3.7%
 actual operating time = 650 hr/yr
 potential operating time = 2,080 hr/yr

Find: usage of Dursban 4E, lb/yr
 usage of xylene, lb/yr
 emission rate for xylene, lb/hr
 actual emission rate for xylene, tpy
 potential emission rate for xylene, tpy

Using equations 3.6-8, 3.6-9, 3.6-10 and 3.6-11:

$$\begin{aligned}
 U_p &= (240 \text{ gal/yr} * 0.976 * 62.3 \text{ lb/ft}^3) / (7.48 \text{ gal/ft}^3) \\
 &= 1951 \text{ lb/yr}
 \end{aligned}$$

$$\begin{aligned}
 U_{\text{xylene}} &= (1951 \text{ lb/yr} * 3.7) / 100 \\
 &= 72 \text{ lb/yr}
 \end{aligned}$$

$$\begin{aligned}
 E'_{\text{xylene}} &= (72 \text{ lb/yr}) / (2000 \text{ lb/ton}) \\
 &= 0.036 \text{ tpy (actual)}
 \end{aligned}$$

3.35

$$\begin{aligned} EP'_{\text{xylene}} &= (0.036 \text{ ton/yr} * 2080 \text{ hr/yr}) / (650 \text{ hr/yr}) \\ &= 0.116 \text{ tpy} \end{aligned}$$

NWS Charleston conducts controlled burning of 6000 acres on a three-year rotation. It is assumed that an equal amount of acreage is burned during each rotation; i.e., one third (2000 acres) is burned each year. The acreage has been described as loblolly pine forest, and prescribed burning of undergrowth is used as a forestry management practice. Since SCDHEC indicated that emissions from controlled burning as a standard forestry management practice are normally not included in emission inventories (re: Memorandum, K. W. Massengill of Davis & Floyd, Inc. telephone conversation with J. Chalmers of SCDHEC - 18 August 1993, in Appendix A), emissions from controlled burning at NWS Charleston (Source ID M74) have not been calculated.

The material handling/storage areas at NWS Charleston do not result in an amount of emissions worthy of calculating as all drums/canisters should be sealed. Additionally, VOC's from these operations should be accounted for in the mass balance performed for the application/use of the product. The acronym SNE in the comment column on Table B-6 indicates that the containers are sealed and no emissions should result.

Charging of batteries is not an activity that has an appropriate emission factor, and any emissions resulting from this activity at NWS Charleston are expected to be negligible. The cooling towers handle only air conditioning water and result in no VOC emissions.

5801\5801.01\CHASNWS.01

3.7 POLLUTANT SUMMARY

Tables D-7A and D-7B gather all of the hazardous emissions data together in tables for actual and potential emissions. Actual toxic emissions are equal to potential toxic emissions for emissions from gas stations and solvent use processes at NWS Charleston.

Most of the emissions indicated on Table D-7A have been calculated in the same way as the surface coating sources (see Section 3.3). The fifth and sixth columns on Table D-7A indicate the percentage of the pollutant identified in the first column of the table. This value is a percentage of the HAP (VOC) or HAP(PM) that is present in the product identified in the row that corresponds to the "SPECIFIC HAP %" columns

Emissions are then calculated using the following equations:

$$E_{\text{spec}} = E'_{\text{toluene}} / H * 2000 \quad (3.7-1)$$

$$E'_{\text{spec}} = U * V_c * (V_{\text{hap}} / 100) * (\text{SPEC} / 100) / 2000 \quad (3.7-2)$$

$$PE'_{\text{spec}} = E_{\text{toluene}} * Hp / 2000 \quad (3.7-3)$$

where:

- E_{spec} = actual toluene emission rate (lb/hr);
- E'_{spec} = actual toluene emission rate (tpy);
- PE'_{spec} = potential toluene emission rate (tpy);
- H = annual operating hours (hr/yr);
- Hp = potential operating hours (hr/yr);
- V_c = VOC content (lb/gal);
- 2000 = conversion factor, pounds to ton;
- V_{hap} = percentage of VOC that is hazardous (%);

U = usage rate (gal/yr);
 SPEC = percentage of V_{hap} representing HAP.

Example Calculation:

Given: Paint spray booth in Building 65 (Source ID-S2)

Gavlon 510 usage, $U = 5$ gpy

Annual operating hours, $H = 2080$ hr/yr (re: Table C-2)

$V_c = 3.96$

$V_{\text{hap}} = 23.6$ (re: Table D-7A)

SPEC = 96 (re: Table D-7A)

Using equations 3.7-2 and 3.7-1:

$$E'_{\text{spec}} = (200 \text{ gal / yr}) * (3.96 \text{ lb / gal}) * (23.6 / 100) * (96 / 100) / (2000 \text{ lb / ton})$$

$$= 0.090 \text{ tpy}$$

$$E_{\text{spec}} = (0.890 \text{ tpy}) / (2000 \text{ lb / ton}) * (2080 \text{ hr / yr})$$

$$= 0.093 \text{ lb/hr}$$

Using equation 3.7-3 to calculate potential emissions:

$$PE_{\text{spec}} = (0.093 \text{ lb / hr}) * (2080 \text{ hr / yr}) / (2000 \text{ lb / ton})$$

$$= 0.090 \text{ tpy}$$

Emissions identified in Table D-7A with "N/A" in the "Parent Material Information" were calculated based upon emission factors.

Table D-1. Emissions from Fuel Burning Equipment at NWS Charleston

NOTES:
 F.O. #2 - Fuel Oil Number 2
 Nat Gas - Natural Gas

PM - particulate matter
 VOC - volatile organic compound
 NOx - oxides of nitrogen
 SO2 - sulfur dioxide
 CO - carbon monoxide
 Formald - Formaldehyde

Notes:

hr - hours
 lb - pounds
 NA - Not Available
 N/A - Not Applicable
 tpy - tons per year

D-8

PM - particulate matter
 VOC - volatile organic compound
 NOx - oxides of nitrogen
 SO2 - sulfur dioxide
 CO - carbon monoxide

D-8

Potential emissions will equal actual emissions as all of solvent used is assumed to volatilize (see Section 3.4)

hr/yr - hours per year
 gal/yr - gallons per year
 lb/hr - pounds per hour
 Oper - operation
 tpy - tons per year

NOTES:

POTENTIAL ACTUAL

PM Emissions, tpy	CO Emissions, tpy	VOC Emissions, tpy	SO2 Emissions, tpy	NOx Emissions, tpy	HAP VOC Emissions, tpy	HAP PM Emissions, tpy	TOTAL EMISSIONS, tpy
2,909	0,519	14,449	1,125	6,018	5,137	3,064	33,221
0,711	0,092	4,442	0,295	1,592	1,559	0,949	9,640

Units for Process Rate are million cubic feet of natural gas burned per year
Units for Process Rate are tons of waste burned per year

NA - not available
CO - carbon monoxide
VOC - volatile organic compounds
HAP - Hazardous Air Pollutant
PM - particulate matter
Ni - nickel
Mn - manganese
Cr - chromium
ethylphenyl glycol phenyl ether
methiscy - methyl isocyanate
Hazwaste - hazardous waste
1,1,1-TCA - 1,1,1-trichloroethane
NR - Not Required

Source: N W S Charleston, 1993

NOTES

NA - not available
 N/A - not applicable
 CAS - Chemical Abstracts Services Number
 VOC - volatile organic compound
 PM - particulate matter
 Formald - Formaldehyde
 HAP - hazardous air pollutant
 POT - Potential
 * Welding Usage is in lb/yr

Emission Calculations for Sources
 without "Parent Material Information"
 are based upon emission factors.

These emission calculations can be
 found by referencing the Source ID
 column of this table with its
 corresponding Section 3 discussion.

Eth Dich - ethylene dichloride
 Eth Dibr - ethylene dibromide
 Ethglycphen - ethylene glycol phenyl ether
 TCE - trichloroethylene
 MEK - methyl ethyl ketone
 MeCl - methyl chloride
 MIBK - methyl isobutyl ketone
 Mn - Manganese

1,1,1-TCA - 1,1,1-Trichloroethane
 Eth Benz - Ethyl Benzene
 Dibutphth - Dibutylphthalate
 Zinc Cr - zinc chromate
 Eth Glyc - ethylene glycol
 PbCr - Lead Chromate
 PCE - perchloroethylene
 Methisoc - methyl isocyanate

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 33

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 33

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

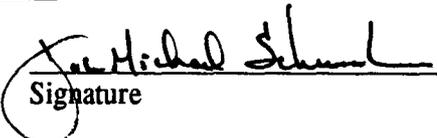

The following pages have been revised: 11, 13-20, 23, 27, and two Attachment (1) maps.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 33

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

The following pages have been revised: 23

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.

Activity

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

102

Activity Identification: Please complete the following table, identifying the activity for which this response is being submitted.

Activity Name:	NAVAL WEAPONS STATION CHARLESTON
UIC:	N00193
Major Claimant:	NAVAL SEA SYSTEMS COMMAND

General Instructions/Background:

Information requested in this data call is required for use by the Base Structure Evaluation Committee (BSEC), in concert with information from other data calls, to analyze both the impact that potential closure or realignment actions would have on a local community and the impact that relocations of personnel would have on communities surrounding receiving activities. In addition to Cost of Base Realignment Actions (COBRA) analyses which incorporate standard Department of the Navy (DON) average cost factors, the BSEC will also be conducting more sophisticated economic and community infrastructure analyses requiring more precise, activity-specific data. For example, activity-specific salary rates are required to reflect differences in salary costs for activities with large concentrations of scientists and engineers and to address geographic differences in wage grade salary rates. Questions relating to "Community Infrastructure" are required to assist the BSEC in evaluating the ability of a community to absorb additional employees and functions as the result of relocation from a closing or realigning DON activity.

Due to the varied nature of potential sources which could be used to respond to the questions contained in this data call, a block appears after each question, requesting the identification of the source of data used to respond to the question. To complete this block, identify the source of the data provided, including the appropriate references for source documents, names and organizational titles of individuals providing information, etc. Completion of this "Source of Data" block is critical since some of the information requested may be available from a non-DoD source such as a published document from the local chamber of commerce, school board, etc. Certification of data obtained from a non-DoD source is then limited to certifying that the information contained in the data call response is an accurate and complete representation of the information obtained from the source. Records must be retained by the certifying official to clearly document the source of any non-DoD information submitted for this data call.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

General Instructions/Background (Continued):

The following notes are provided to further define terms and methodologies used in this data call. Please ensure that responses consistently follow this guidance:

Note 1: Throughout this data call, the term "activity" is used to refer to the DON installation that is the addressee for the data call.

Note 2: Periodically throughout this data call, questions will include the statement that the response should refer to the "area defined in response to question 1.b., (page 3)". Recognizing that in some large metropolitan areas employee residences may be scattered among many counties or states, the scope of the "area defined" may be limited to the sum of:

- those counties that contain government (DoD) housing units (as identified in 1.b.2)), and,
- those counties closest to the activity which, in the aggregate, include the residences of 80% or more of the activity's employees.

Note 3: Responses to questions referring to "civilians" in this data call should reflect federal civil service appropriated fund employees.

1. Workforce Data

1.a. Average Federal Civilian Salary Rate. Provide the projected FY 1996 average gross annual appropriated fund civil service salary rate for the activity identified as the addressee in this data call. This rate should include all cash payments to employees, and exclude non-cash personnel benefits such as employer retirement contributions, payments to former employees, etc.

Average Appropriated Fund Civilian Salary Rate:	\$29,284.18
---	-------------

Source of Data (1.a. Salary Rate): Defense Civilian Personnel Data System 7/02/94
--

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

1.b. Location of Residence. Complete the following table to identify where employees live. Data should reflect current workforce.

1.b.1) Residency Table. Identify residency data, by county, for both military and civilian (civil service) employees working at the installation (including, for example, operational units that are homeported or stationed at the installation). For each county listed, also provide the estimated average distance from the activity, in miles, of employee residences and the estimated average length of time to commute one-way to work. For the purposes of displaying data in the table, any county(s) in which 1% or fewer of the activity's employees reside may be consolidated as a single line entry in the table, titled "Other".

County of Residence	State	No. of Employees Residing in County		Percentage of Total Employees	Average Distance From Base (Miles)	Average Duration of Commute (Minutes)
		Military	Civilian			
Charleston	SC	369	289	24	12	16
Berkeley	SC	1,068	529	60	7	10
Dorchester	SC	217	164	14	20	30
Misc	SC	0	52	2	NA	NA

= 100%

As discussed in Note 2 on Page 2, subsequent questions in the data call refer to the "area defined in response to question 1.b., (page 3)". In responding to these questions, the scope of the "area defined" may be limited to the sum of: a) those counties that contain government (DoD) housing units (as identified below), and, b) those counties closest to the activity which, in the aggregate, include the residences of 80% or more of the activity's employees.

1.b.2) Location of Government (DoD) Housing. If some employees of the base live in government housing, identify the county(s) where government housing is located:

Charleston and Berkeley Counties

Source of Data (1.b. 1) & 2) Residence Data): **Housing Manual and Area Map**

**NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA**

1.c. Nearest Metropolitan Area(s). Identify all major metropolitan area(s) (i.e., population concentrations of 100,000 or more people) which are within 50 miles of the installation. If no major metropolitan area is within 50 miles of the base, then identify the nearest major metropolitan area(s) (100,000 or more people) and its distance(s) from the base.

City	County	Distance from base (miles)
Charleston/North Charleston Metropolitan Statistical Area (MSA)¹	Berkeley, Charleston, & Dorchester	WPNSTA Charleston is located within the MSA
Columbia, SC	Richland	100
Atlanta, GA	Fulton	291
Charlotte, NC	Mecklenburg	210

Source of Data (1.c. Metro Areas): Mary Graham, Director of the Center for Business Research of the Charleston Trident Chamber of Commerce; Rand McNally Road Atlas 1992.

¹ Comprised of three counties - Berkeley, Charleston, and Dorchester. The MSA is comprised of 25 incorporated communities with the largest being the adjacent communities of Charleston and North Charleston.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

1.d. Age of Civilian Workforce. Complete the following table, identifying the age of the activity's civil service workforce.

Age Category	Number of Employees	Percentage of Employees
16 - 19 Years	0	0.00
20 - 24 Years	7	0.68
25 - 34 Years	122	11.80
35 - 44 Years	319	30.85
45 - 54 Years	386	37.33
55 - 64 Years	194	18.76
65 or Older	6	0.58
TOTAL	1,034	100.00%

1.e. Education Level of Civilian Workforce

1.e.1) Education Level Table. Complete the following table, identifying the education level of the activity's civil service workforce.

Last School Year Completed	Number of Employees	Percentage of Employees
8th Grade or less	9	0.87
9th through 11th Grade	95	9.19
12th Grade or High School Equivalency	617	59.67
1-3 Years of College	209	20.21
4 Years of College (Bachelors Degree)	79	7.64
5 or More Years of College (Graduate Work)	25	2.42
TOTAL	1,034	100.0 %

1.e.2) Degrees Achieved. Complete the following table for the activity's civil service workforce. Identify the number of employees with each of the following degrees, etc. To avoid double counting, only identify the highest degree obtained by a worker (e.g., if an employee has both a Master's Degree and a Doctorate, only include the employee under the category "Doctorate").

Degree	Number of Civilian Employees
Terminal Occupation Program - Certificate of Completion, Diploma or Equivalent (for areas such as technicians, craftsmen, artisans, skilled operators, etc.)	51
Associate Degree	81
Bachelor Degree	69
Masters Degree	16
Doctorate	0

Source of Data (1.e.1) and 2) Education Level Data): Defense Civilian Personnel Data System 7/02/94

ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

1.f. Civilian Employment By Industry. Complete the following table to identify by "industry" the type of work performed by civil service employees at the activity. The intent of this table is to attempt to stratify the activity civilian workforce using the same categories of industries used to identify private sector employment. Employees should be categorized based on their primary duties. Additional information on categorization of private sector employment by industry can be found in the Office of Management and Budget Standard Industrial Classification (SIC) Manual. However, you do not need to obtain a copy of this publication to provide the data requested in this table.

Note the following specific guidance regarding the "Industry Type" codes in the first column of the table: Even though categories listed may not perfectly match the type of work performed by civilian employees, please attempt to assign each civilian employee to one of the "Industry Types" identified in the table. However, only use the Category 6, "Public Administration" sub-categories when none of the other categories apply. Retain supporting data used to construct this table at the activity-level, in case questions arise or additional information is required at some future time. Leave shaded areas blank.

Industry	SIC Codes	No. of Civilians	% of Civilians
1. Agriculture, Forestry & Fishing	01-09	2	0.19
2. Construction (includes facility maintenance and repair)	15-17	167	16.15

ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

Description of Occupational Categories used in Table 1.g. The following list identifies public and private sector occupations included in each of the major occupational categories used in the table. Refer to these examples as a guide in determining where to allocate appropriated fund civil service jobs at the activity.

1. Executive, Administrative and Management. Accountants and auditors; administrative services managers; budget analysts; construction and building inspectors; construction contractors and managers; cost estimators; education administrators; employment interviewers; engineering, science and data processing managers; financial managers; general managers and top executives; chief executives and legislators; health services managers; hotel managers and assistants; industrial production managers; inspectors and compliance officers, except construction; management analysts and consultants; marketing, advertising and public relations managers; personnel, training and labor relations specialists and managers; property and real estate managers; purchasing agents and managers; restaurant and food service managers; underwriters; wholesale and retail buyers and merchandise managers.
2. Professional Specialty. Use sub-headings provided.
3. Technicians and Related Support. Health Technologists and Technicians sub-category - self-explanatory. Other Technologists sub-category includes aircraft pilots; air traffic controllers; broadcast technicians; computer programmers; drafters; engineering technicians; library technicians; paralegals; science technicians; numerical control tool programmers.
4. Administrative Support & Clerical. Adjusters, investigators and collectors; bank tellers; clerical supervisors and managers; computer and peripheral equipment operators; credit clerks and authorizers; general office clerks; information clerks; mail clerks and messengers; material recording, scheduling, dispatching and distributing; postal clerks and mail carriers; records clerks; secretaries; stenographers and court reporters; teacher aides; telephone, telegraph and teletype operators; typists, word processors and data entry keyers.
5. Services. Use sub-headings provided.
6. Agricultural, Forestry & Fishing. Self explanatory.
7. Mechanics, Installers and Repairers. Aircraft mechanics and engine specialists; automotive body repairers; automotive mechanics; diesel mechanics; electronic equipment repairers; elevator installers and repairers; farm equipment mechanics; general maintenance mechanics; heating, air conditioning and refrigeration technicians; home appliance and power tool repairers, industrial machinery repairers; line installers and cable splicers; millwrights; mobile heavy equipment mechanics; motorcycle, boat and small engine mechanics; musical instrument repairers and tuners; vending machine servicers and repairers.
8. Construction Trades. Bricklayers and stonemasons; carpenters; carpet installers; concrete masons and terrazzo workers; drywall workers and lathers; electricians; glaziers; highway maintenance; insulation workers; painters and paperhangers; plasterers; plumbers and pipefitters; roofers; sheet metal workers; structural and reinforcing ironworkers; tilesetters.
9. Production Occupations. Assemblers; food processing occupations; inspectors, testers and graders; metalworking and plastics-working occupations; plant and systems operators, printing occupations; textile, apparel and furnishings occupations; woodworking occupations; miscellaneous production operations.
10. Transportation & Material Moving. Bus drivers; material moving equipment operators; rail transportation occupations; truck drivers; water transportation occupations.
11. Handlers, Equipment Cleaners, Helpers and Laborers (not included elsewhere). Entry level jobs not requiring significant training.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

1.h. Employment of Military Spouses. Complete the following table to provide estimated information concerning military spouses who are also employed in the area defined in response to question 1.b., above. Do not fill in shaded area.

1. Percentage of Military Employees Who Are Married:	44%*
2. Percentage of Military Spouses Who Work Outside of the Home:	58%*
3. Break out of Spouses' Location of Employment (Total of rows 3a. through 3d. should equal 100% and reflect the number of spouses used in the calculation of the "Percentage of Spouses Who Work Outside of the Home".	
3a. Employed "On-Base" - Appropriated Fund:	16%
3b. Employed "On-Base" - Non-Appropriated Fund:	32%
3c. Employed "Off-Base" - Federal Employment:	4%
3d. Employed "Off-Base" - Other Than Federal Employment	48%

* All tenant's data not immediately available; however, enough data collected that % shown is considered representative of actual %.

Source of Data (1.h.) Spouse Employment Data): Personal interviews, SF171, PARS documents
--

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

2. Infrastructure Data. For each element of community infrastructure identified in the two tables below, rate the community's ability to accommodate the relocation of additional functions and personnel to your activity. Please complete each of the three columns listed in the table, reflecting the impact of various levels of increase (20%, 50% and 100%) in the number of personnel working at the activity (and their associated families). In ranking each category, use one of the following three ratings:

- A - Growth can be accommodated with little or no adverse impact to existing community infrastructure and at little or no additional expense.
- B - Growth can be accommodated, but will require some investment to improve and/or expand existing community infrastructure.
- C - Growth either cannot be accommodated due to physical/environmental limitations or would require substantial investment in community infrastructure improvements.

Table 2.a., "Local Communities": This first table refers to the local community (i.e., the community in which the base is located) and its ability to meet the increased requirements of the installation.

Table 2.b., "Economic Region": This second table asks for an assessment of the infrastructure of the economic region (those counties identified in response to question 1.b., (page 3) - taken in the aggregate) and its ability to meet the needs of additional employees and their families moving into the area.

For both tables, annotate with an asterisk (*) any categories which are wholly supported on-base, i.e., are not provided by the local community. These categories should also receive an A-B-C rating. Answers for these "wholly supported on-base" categories should refer to base infrastructure rather than community infrastructure.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

2.a. Table A: Ability of the local community² to meet the expanded needs of the base.

2.a.1) Using the A - B - C rating system described above, complete the table below.

Category	20% Increase	50% Increase	100% Increase
Off-Base Housing	A	A	A
Schools - Public	A	A	A
Schools - Private	A	A	A
Public Transportation - Roadways	A	A	A
Public Transportation - Buses/Subways	A	A	A
Public Transportation - Rail	N/A	N/A	N/A
Fire Protection	A*	A*	A*
Police	A*	A*	A*
Health Care Facilities	A	A	A
Utilities:	A	A	A
Water Supply	A	A	A
Water Distribution	A	A	A
Energy Supply	A	A	A
Energy Distribution	A	A	A
Wastewater Collection	A	A	A
Wastewater Treatment	A	A	A
Storm Water Collection	A	A	A
Solid Waste Collection and Disposal	A	A	A
Hazardous/Toxic Waste Disposal	A	A	A
Recreational Activities	A	A	A

Remember to mark with an asterisk any categories which are wholly supported on-base.

*** Fire and Police protection for base infrastructure are provided by on-site personnel. Mutual aid agreements are discussed in questions 3.d. and 3.e.3.**

2.a.2) For each rating of "C" identified in the table on the preceding page, attach a brief narrative explanation of the types and magnitude of improvements required and/or the nature of any barriers that preclude expansion.

All categories continue to have a rating of "A" as they did during the BRAC93 process. Considering the impact of closure of the Charleston Naval Shipyard and Charleston Naval Base due to BRAC93; WPNSTA Charleston, tenants, dependents, etc. could increase 100% and the net effect on the local community's infrastructure would still be negative.

Source of Data (2.a. 1) & 2) - Local Community Table): Center for Business Research, Charleston Trident Chamber of Commerce, 6/94.

² Includes cities of North Charleston and Goose Creek both of which border on WPNSTA Charleston.

2.b. Table B: Ability of the region³ described in the response to question 1.b. (page 3) (taken in the aggregate) to meet the needs of additional employees and their families relocating into the area.

2.b.1) Using the A - B - C rating system described above, complete the table below.

Category	20% Increase	50% Increase	100% Increase
Off-Base Housing	A	A	A
Schools - Public	A	A	A
Schools - Private	A	A	A
Public Transportation - Roadways	A	A	A
Public Transportation - Buses/Subways	A	A	A
Public Transportation - Rail	N/A	N/A	N/A
Fire Protection	A*	A*	A*
Police	A*	A*	A*
Health Care Facilities	A	A	A
Utilities:	A	A	A
Water Supply	A	A	A
Water Distribution	A	A	A
Energy Supply	A	A	A
Energy Distribution	A	A	A
Wastewater Collection	A	A	A
Wastewater Treatment	A	A	A
Storm Water Collection	A	A	A
Solid Waste Collection and Disposal	A	A	A
Hazardous/Toxic Waste Disposal	A	A	A
Recreation Facilities	A	A	A

Remember to mark with an asterisk any categories which are wholly supported on-base.

* Fire and Police protection for base infrastructure are provided by on-site personnel. Mutual aid agreements are discussed in questions 3.d. and 3.e.3.

2.b.2) For each rating of "C" identified in the table on the preceding page, attach a brief narrative explanation of the types and magnitude of improvements required and/or the nature of any barriers that preclude expansion.

All categories continue to have a rating of "A" as they did during the BRAC93 process. Considering the impact of closure of the Charleston Naval Shipyard and Charleston Naval Base due to BRAC93; WPNSTA Charleston, tenants, dependents, etc. could increase 100% and the net effect on the region's community infrastructure would still be negative.

Source of Data (2.b. 1) & 2) - Regional Table): Center for Business Research, Charleston Trident Chamber of Commerce, 6/94.

³ Comprised of Berkeley, Charleston, and Dorchester counties.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)

ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

3. Public Facilities Data:

3.a. Off-Base Housing Availability. For the counties identified in the response to question 1.b. (page 3), in the aggregate, estimate the current average vacancy rate for community housing. Use current data or information identified on the latest family housing market analysis. For each of the categories listed (rental units and units for sale), combine single family homes, condominiums, townhouses, mobile homes, etc., into a single rate:

Overall Vacancy Rate: 20%

Rental Units available: 6,302⁴

Units for Sale available: 5,670

Source of Data (3.a. Off-Base Housing): Greater Charleston Apartment Association, Charleston's Apartment Director, Charleston Trident Association of Realtors (MLS), Department of the Army Corps of Engineers Homeowner's Association Program (HAP), and Charleston Trident Home Builders Association.

⁴ Includes 302 MLS rental house units and 6,000 apartment units. (6,000 units includes only those in buildings with four or more units/buildings. Information on other units not available.) Mobile homes and duplex data not available.

3.b. Education.

3.b.1) Information is required on the current capacity and enrollment levels of school systems serving employees of the activity. Information should be keyed to the counties identified in the response to question 1.b. (page 3).

School District	County	Number of Schools			Enrollment		Pupil-to-Teacher Ratio		Does School District Serve Gov't Housing Units? *
		Elementary	Middle	High	Current	Max. Capacity	Current	Max. Ratio	
Charleston County	Charleston	44	15	11	44,124	46,800	19:1	Note 3	Yes
Berkeley County	Berkeley	19	8	8	28,116	30,000	18:1	Note 3	Yes
Dorchester District II	Dorchester	10	3	3	15,304	Note 1	20:1	Note 3	No
Dorchester District IV	Dorchester	3	1	2	2,556	Note 2	15:1	Note 3	No

* Answer "Yes" in this column if the school district in question enrolls students who reside in government housing.

Note 1: Dorchester II is close to maximum capacity, but there is no set number. Closure of the Charleston Naval Shipyard and Naval Station Charleston due to BRAC93 will have an undetermined negative impact on enrollment.

Note 2: Dorchester IV is not close to maximum capacity, nor does it have a maximum capacity number.

Note 3: The State of SC sets the maximum pupil-to-teacher ratio at 35:1.

Source of Data (3.b.1) Education Table): Phoncons and follow-up faxes with Public Relations Offices and Superintendents' offices of each school district.

3.b.2) Are there any on-base "Section 6" Schools? If so, identify number of schools and current enrollment.

No.

Source of Data (3.b.2) On-Base Schools): Per phoncon with Clint Hepler (NOC Indian Head, MD) and BSAT. BSAT defined a "Section 6" school as "a school administered by DOD Office of Dependent's Education vice local jurisdiction."

**NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65

3.b.3) For the counties identified in the response to question 1.b. (page 3), in the aggregate, list the names of undergraduate and graduate colleges and universities which offer certificates, Associate, Bachelor or Graduate degrees :

**Charleston Southern University
The Citadel
College of Charleston
Medical University of South Carolina
Webster University
Central Wesleyan College**

On Naval Base Charleston, City Colleges of Chicago and Limestone College provide courses and degree programs to military personnel.

Source of Data (3.b.3) Colleges): Center for Business Research, Charleston Trident Chamber of Commerce, 6/94.

3.b.4) For the counties identified in the response to question 1.b. (page 3), in the aggregate, list the names and major curriculums of vocational/technical training schools:

Trident Technical College has courses offered in the following areas: Arts & Sciences, Business Technology, Engineering Technology, Health Sciences, Hospitality & Tourism, and Industrial Technology. Associates Degrees and Certificates are awarded.

Johnson & Wales University has a vocational curriculum offering associates and bachelors degrees in the culinary arts and tourism/hospitality management

The Nielsen Electronics Institute offers associates degrees in electronics technology as well as courses in truck driver training.

Source of Data (3.b.4) Vo-tech Training): Center for Business Research, Charleston Trident Chamber of Commerce, 6/94

3.c. Transportation.

3.c.1) Is the activity served by public transportation?

	<u>Yes</u>	<u>No</u>
Bus:	<u>X</u>	—
Rail:	—	<u>X</u>
Subway:	—	<u>X</u>
Ferry:	—	<u>X</u>

Source of Data (3.c.1) Transportation): **Center for Business Research, Charleston Trident Chamber of Commerce, 6/94.**

3.c.2) Identify the location of the nearest passenger railroad station (long distance rail service, not commuter service within a city) and the distance from the activity to the station.

Amtrak Station, 4565 Gaynor Avenue, North Charleston, SC. four miles from WPNSTA Charleston.

Source of Data (3.c.2) Transportation): **Charleston Area Map**

3.c.3) Identify the name and location of the nearest commercial airport (with public carriers, e.g., USAIR, United, etc.) and the distance from the activity to the airport.

Charleston International Airport, four miles from WPNSTA Charleston

Source of Data (3.c.3) Transportation): **Charleston Area Map**

3.c.4) How many carriers are available at this airport?

There are five major airlines together offering over 100 daily flights servicing the Charleston International Airport: American, Continental, Delta, US Air and United.

Source of Data (3.c.4) Transportation): **Center for Business Research, Charleston Trident Chamber of Commerce, 6/94**

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

3.c.5) What is the Interstate route number and distance, in miles, from the activity to the nearest Interstate highway?

.7 miles from I-526

Source of Data (3.c.5) Transportation): **Charleston Area Map**

3.c.6) Access to Base:

3.c.6)a) Describe the quality and capacity of the road systems providing access to the base, specifically during peak periods. (Include both information on the area surrounding the base and information on access to the base, e.g., numbers of gates, congestion problems, etc.)

Access to the activity is provided mainly via Red Bank Road, a two lane, all weather, paved road that widens to four and six lanes at several points. North Rhett Boulevard, a two lane all weather paved, limited access road ties into Red Bank Road approximately 1/3 of a mile from the station boundary. Red Bank Road runs generally East/West while North Rhett runs generally North/South. Red Bank Road connects to U.S. Highway 52 approximately four miles from the station boundary. The peak period capacity of Red Bank (U.S. 29) is 6,000 vehicles per hour each way.

3.c.6)b) Do access roads transit residential neighborhoods?

Yes: Red Bank Road is bordered by several subdivisions

3.c.6)c) Are there any easements that preclude expansion of the access road system?

No

3.c.6)d) Are there any man-made barriers that inhibit traffic flow (e.g., draw bridges, etc.)?

No

Source of Data (3.c.6) Transportation): **Site visits/aerial photos/area maps**

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

3.d. Fire Protection/Hazardous Materials Incidents. Does the activity have an agreement with the local community for fire protection or hazardous materials incidents? Explain the nature of the agreement and identify the provider of the service.

Yes. WPNSTA Charleston has a Mutual Fire Fighting Assistance agreement with Naval Station Charleston, the City of Goose Creek, Charleston Air Force Base, Hanahan, and North Charleston City fire departments. The agreement includes a mutual response to fires and/or hazardous material emergencies when requested by the senior fire official on duty.

Source of Data (3.d. Fire/Hazmat): Mutual fire fighting assistance agreements.

3.e. Police Protection.

3.e.1) What is the level of legislative jurisdiction held by the installation?

Exclusive, concurrent, and proprietary.

3.e.2) If there is more than one level of legislative jurisdiction for installation property, provide a brief narrative description of the areas covered by each level of legislative jurisdiction and whether there are separate agreements for local law enforcement protection.

Exclusive Jurisdiction: Exists in situations in which the federal government has received, by whatever method, all of the authority of the State to legislate within the land area in question. Normally, no reservation is made by the State except the right to serve civil or criminal process on the federal area. Such legal process usually concerns crimes or actions that occurred outside the federal property on state lands, but the individuals involved are later located in the federal area. The State may also exercise other authority over the property in question if applicable federal statutes permit it to do so. The following areas are considered in exclusive jurisdiction: WPNSTA Southside; WPNSTA Northside (areas north of Foster Creek inclusive of Big Island); WPNSTA South (area south of Goose Creek); and Quarters A, C, D, and Storm Pointe Conference Center.

Concurrent Jurisdiction: Concurrent jurisdiction is that jurisdiction where the United States authority, which would otherwise amount to exclusive legislative jurisdiction over an area, except the state has reserved to itself the right to exercise concurrently with the United States, all of the same jurisdiction: The following areas are considered in concurrent jurisdiction: Southside Housing; MenRiv Housing; Hunley Park Housing; the area from Post 7 to Foster Creek; and Marrington Plantation.

Propriety Jurisdiction: Proprietary jurisdiction applies in those instances when the Federal Government has acquired some right or title to an area in the state, but has not obtained any measure of the state's authority over the area (this does not preclude the Federal Government from exercising its other constitutional powers, i.e., protection of government property). This shall be referred to as "Proprietorial Jurisdiction." In these areas, prosecution for non-Federal, minor offenses will occur in state courts only. The following areas are considered in proprietary jurisdiction: Wharf ALPHA; Pier BRAVO; Pier CHARLIE; Pier X-RAY; TC Dock (WPNSTA South); and Finger Piers (WPNSTA South).

**NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA**

3.e.3) Does the activity have a specific written agreement with local law enforcement concerning the provision of local police protection?

Yes, Goose Creek Police Department Reserve Officer Agreement.

3.e.4) If agreements exist with more than one local law enforcement entity, provide a brief narrative description of whom the agreement is with and what services are covered.

N/A

3.e.5) If military law enforcement officials are routinely augmented by officials of other federal agencies (BLM, Forest Service, etc.), identify any written agreements covering such services and briefly describe the level of support received.

N/A

Source of Data (3.e. 1) - 5) - Police): WPNSTACHASNINST 5510.26A and Goose Creek Reserve Officer Agreement.

3.f. Utilities.

3.f.1) Does the activity have an agreement with the local community for water, refuse disposal, power or any other utility requirements? Explain the nature of the agreement and identify the provider of the service.

N62467-79-C-1852 - Berkeley County Water and Sanitation Authority provides sewer treatment for WPNSTA Northside and Eastside.

N62467-82-C-1850 - North Charleston Sewer District provides sewer treatment for WPNSTA Southside.

N62467-89-F-1817 - South Carolina Electric and Gas (SCE&G) provides electrical power for all of WPNSTA Charleston.

N62467-89-F-1806 - SCE&G provides gas for all areas of WPNSTA Charleston.

N62467-89-C-1805 - Charleston Commissioner of Public Works provides potable water for all of WPNSTA Charleston

Berkeley County Ordinance No. 91-6-16 provides for solid waste disposal and recycling.

3.f.2) Has the activity been subject to water rationing or interruption of delivery during the last five years? If so, identify time period during which rationing existed and the restrictions imposed. Were activity operations affected by these situations? If so, explain extent of impact.

--NO--

3.f.3) Has the activity been subject to any other significant disruptions in utility service, e.g., electrical "brown outs", "rolling black outs", etc., during the last five years? If so, identify time period(s) covered and extent/nature of restrictions/disruption. Were activity operations affected by these situations? If so, explain extent of impact.

--NO--

Source of Data (3.f. 1) - 3) Utilities): Copies of the above contracts are maintained in the WPNSTA Charleston PWD's Code 091 Division.

ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA**

5. Other Socio-Economic Impacts. For each of the following areas, describe other recent (past 5 years), on-going or projected economic impacts (both positive and negative) on the geographic region defined by your response to question 1.b. (page 3), in the aggregate:

5.a. Loss of Major Employers:

The major industries fueling the economy of the Charleston Trident Area Metropolitan Area include the military, the Visitor Industry, Manufacturing, the Medical Industry, and the Port of Charleston.

Total military employment (including active, civilian, and contract) in the region stands at approximately 32,000, a decrease of 41% since 1989. In October 1991 and again in March 1992, a major reduction in force occurred at the Charleston Naval Shipyard. The total Civilian layoff was 1,400 workers. Although a majority of laid-off workers were placed back into the workforce, the layoff contributed to a rise in unemployment in the region from 4.9% in October 1991 to 6.6% in March 1992. As of April 1994, the metro area's unemployment stands at 6.3%.

In June of 1993, the Base Realignment and Closure Commission voted to shutdown the Charleston Naval Station and Naval Shipyard. The facilities slated for closure employ approximately 20,000 active duty military and civilian workers with a \$600 million payroll.

In addition, a major military contractor, General Dynamics, announced in November 1993, that it would cease operations at its Charleston facility March 31, 1994, laying off 325 employees. This closing has occurred. Another of the region's major employers, Du Pont, announced in October 1993, that it would shutdown one of its production lines in Berkeley County affecting 200 to 250 workers.

Other area major employer reductions include: 1-the Medical University of South Carolina, which reduced its workforce by 307 positions June 27, 1994, and has announced it may cut another 1,300 jobs over the next five years; 2-Reliance Comm/Tec Corp., a major manufacturer employing over 230 workers shutdown its plant in December 1993; and 3-Charleston Manufacturing, a 160 employee apparel manufacturer, closed its doors December 1993.

WPNSTA Charleston is also under going cutbacks, reductions, and probable reductions in force (RIFs) due to declining budgets.

Further military cutbacks will have severe economic ramifications for the economy of Berkeley, Charleston and Dorchester counties.

5.b. Introduction of New Businesses/Technologies:

A total of 10 new manufacturing companies announced new operations in the Charleston Trident region in 1991, adding some 750 jobs and more than \$750 million in capital investment to the region. For 1992, capital investment totaled over \$455 million while over 600 jobs were added. In 1993, more than \$40 million in new and expanded capital investments were announced bringing an estimate 500 jobs to the area. These 1993 announcements include expansions by MDT Diagnostic and Westvaco Corporation. So far in 1994, the region's economic development investment announcements total nearly \$18 million, bringing over 250 new jobs to the area. These developments include the relocation to our area of the corporate headquarters of Oneita Industries, Inc., a national active wear and infants wear manufacturer, and the expansion of Healthsource, Inc., a health maintenance organization with its South Carolina Headquarters in the Charleston Metro area. Coming to WPNSTA Charleston are the US Army's Strategic Mobility Logistics Base (SMLB) Program and Naval Command and Ocean Surveillance Center In-Service Engineering, East Coast Division (NISE EAST)

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

5.c. Natural Disasters:

Because of the region's location on the Atlantic coast, the area is susceptible to hurricane activity during the summer and early fall months. The last storm to make landfall was Hugo in September 1989. With the exception of some vegetation, a full economic recovery occurred with 12-18 months following the storm.

5.d. Overall Economic Trends:

Comprised of three counties - Berkeley, Charleston and Dorchester - the Charleston Metropolitan region is influenced heavily by four major economic sectors -- the Military, the Port of Charleston, the Visitor Industry and the Medical community. The region has experienced a 41% decline in total military employment since 1989, but has maintained overall job growth until mid-1993. During the past 12 months, the region's total civilian labor force and total employment has begun to decline since the announcement of the closing of the Charleston Naval Station and Shipyard as well as a number of layoffs at several area manufacturers.

During 1993 and 1994, the region's Visitor Industry and Port have experienced positive growth. The Medical community, centered around the Medical University of South Carolina has begun to downsize as the national health care industry begins to restructure.

One of the major concerns of the community is the replacement of military jobs with jobs of comparable earnings. Average civilian jobs in the region are only 60% of average salary levels of military civilian jobs that will be lost. The long-term economic impact of the loss of the Naval Station and Shipyard will be severe.

Source of Data (5. Other Socio/Econ): Mary Graham, Director for the Center for Business Research, Charleston Trident Chamber of Commerce, 6/94.

6. Other. Identify any contributions of your activity to the local community not discussed elsewhere in this response.

1. Received awards from the Trident Chamber of Commerce for having an outstanding Business Education Partnership Program.
2. WPNSTA sponsors four local schools: Marrington Elementary, Marrington Middle, MENRIV Elementary, and Goose Creek High.
3. Received the Navy's 1992-1993 Outstanding Regional Personnel Excellence Award for the most outstanding school partnership.
4. Received the 1993 Berkeley County Board of Education Award for an outstanding volunteer program working with their schools (second time recipient).
5. During the 1993-1994 school year, WPNSTA Charleston employees volunteered over 3,000 hours of work with our partnership schools.

NAVAL WEAPONS STATION CHARLESTON (UIC 00193)
BRAC 95 - DATA CALL 65
ECONOMIC AND COMMUNITY INFRASTRUCTURE DATA

6. **Jointly produce a weekly television program called "Navy Kids" for our partnership schools that focuses on issues of importance to grade school age children.**
7. **Received the award Plaque of Commendation by the South Carolina Commission for the Blind in appreciation for significant placement efforts.**
8. **Actively involved in the Charleston Area Mayor's Committee on Employment of People of Disabilities; will co-chair the annual festival to be held at Northwoods Mall in October 1994.**
9. **Involved in a dynamic "Command Day Program" where Navy personnel donate a day every month to assist our partnership schools, local orphanage and churches, MWR and Housing with various requirements; i.e. painting, carpentry, ball field maintenance, landscaping, etc.**
10. **Provide Navy personnel to tutor students at our partnership schools.**
11. **Conduct a "S.A.F.E. (School Athletic Fitness Education) Program" at the partnership schools where Navy personnel work with the children to prepare for and encourage long-term fitness programs.**
12. **Recently received a plaque from the South Carolina Department of Public Safety for becoming a part of the 1993 national Safety Belt Honor Roll. The 90% plus safety belt usage represents our commitment to protect all military and civilian personnel that travel through and on the WPNSTA Charleston complex. (Article published in the April/May 1994 Cannon Ball.)**
13. **Natural Resources Office has an active hunting program that keeps control over the deer population on Station, thus reducing the number of deer-vehicle accidents on Station.**
14. **Local Scout troops also benefit from the Natural Resources program as several of the Scout's Order of the Arrow ceremonies are based on Native American Indian practices and involve the respectful use of deer bones, hair and antlers.**
15. **Another benefit of deer hunting is the Hide Program. Since 1985, WPNSTA Charleston has provided deer hides to the Benevolent and Protective Order of Elks (Charleston Lodge #242). The hides are sent to a tannery and given to any Veterans Administration or military hospital in the country upon request. (Article published in the April/May 1994 Cannon Ball.)**
16. **Provides parent classes on child raising and development to the local community.**
17. **Won the 1992 MWR South Carolina State Recreation Award for Outstanding Special Agency as a result of providing the highest quality Recreation/Leisure Services.**

BRAC-95 CERTIFICATION FOR DATA CALL NUMBER 65

Reference: SECNAVNOTE 11000 of 08 December 1993

In accordance with policy set forth by the Secretary of the Navy, personnel of the Department of the Navy, uniformed and civilian, who provide information for use in the BRAC-95 process are required to provide a signed certification that states "I certify that the information contained herein is accurate and complete to the best of my knowledge and belief."

The signing of this certification constitutes a representation that the certifying official has reviewed the information and either (1) personally vouches for its accuracy and completeness or (2) has possession of, and is relying upon, a certification executed by a competent subordinate.

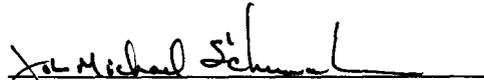

Each individual in your activity generating information for the BRAC-95 process must certify that information. Enclosure (1) is provided for individual certifications and may be duplicated as necessary. You are directed to maintain those certifications at your activity for audit purposes. For purposes of this certification sheet, the commander of the activity will begin the certification process and each reporting senior in the Chain of Command reviewing the information will also sign this certification sheet. This sheet must remain attached to this package and be forwarded up the Chain of Command. Copies must be retained by each level in the Chain of Command for audit purposes.

I certify that the information contained herein is accurate and complete to the best of my knowledge and belief.
