Red River Defense Complex

People With A Vision Proudly Creating Excellence

Briefing: Military Complex Overview
Presented by: Dr. Phillip DuVall

Chart 2.

First, we are a major defense complex unlike any other installation in the world.

Our complex consists of a DLA Distribution Center, Red River Army Depot, Lone Star Army Ammunition Plant and eight tenants who not only support the complex but also support customers beyond the boundaries of this installation.

The physical size of the Complex is 35,000 acres and it is located 20 miles west of Texarkana.

Unique Industrial Complex

- **Defense Logistics Agency, Defense Distribution Depot Red River**
- **Red River Army Depot**
- **Lone Star Army Ammunition Plant**
- **Eight Tenants**

Chart 3.

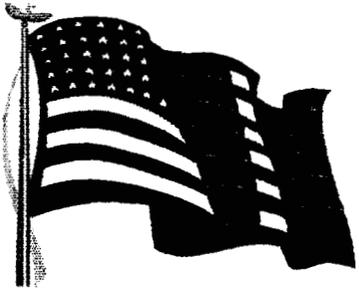

The primary missions of the major parts of our complex are outlined here. The Distribution Depot serves not only the Maintenance Depot but many external customers as I'll show you later.

The Red River Army Depot includes both Maintenance and Ammunition Storage Operations.

The Lone Star Plant is adjacent to Red River. It is contractor operated and manufactures ammunition.

Each of these missions is a vital part of the total complex. As you are aware, DoD's plan is to realign the Distribution mission, close the Maintenance Depot, except rubber products and enlave the ammunition and rubber operations to Lone Star.

But these missions do not operate as self-contained entities.

Red River Military Complex

- Defense Logistics Agency, Defense Distribution Depot
- Army Maintenance Depot
- Army Ammunition Depot
- Army Contractor, Lone Star Ammunition Plant

Receipt, Storage, and Issue of Vehicle and Repair Parts

Repair and Modification of Army Weapon Systems and Components

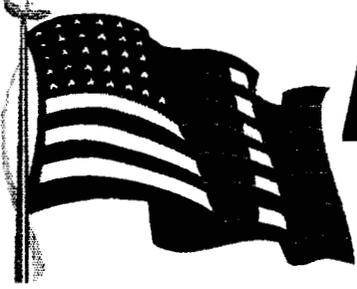

Receipt, Storage, Maintenance, and Issue of Ammunition

Manufacture of Ammunition

Chart 4.

Each is dependent on the other. This creates synergy which reduces the costs of operations because of shared base operations support and other resources. For example, Maintenance is both a customer and supplier of DLA, and vice versa. Vehicles are received by the DLA Distribution Depot, issued to Maintenance for repair and returned to DLA for storage or distribution as required.

Removal of any of these missions will result in increased support cost for the remaining missions because some support, like the boiler plant, water plant, and industrial waste water treatment plant must be maintained for the remaining missions.

Red River Military Complex Synergy

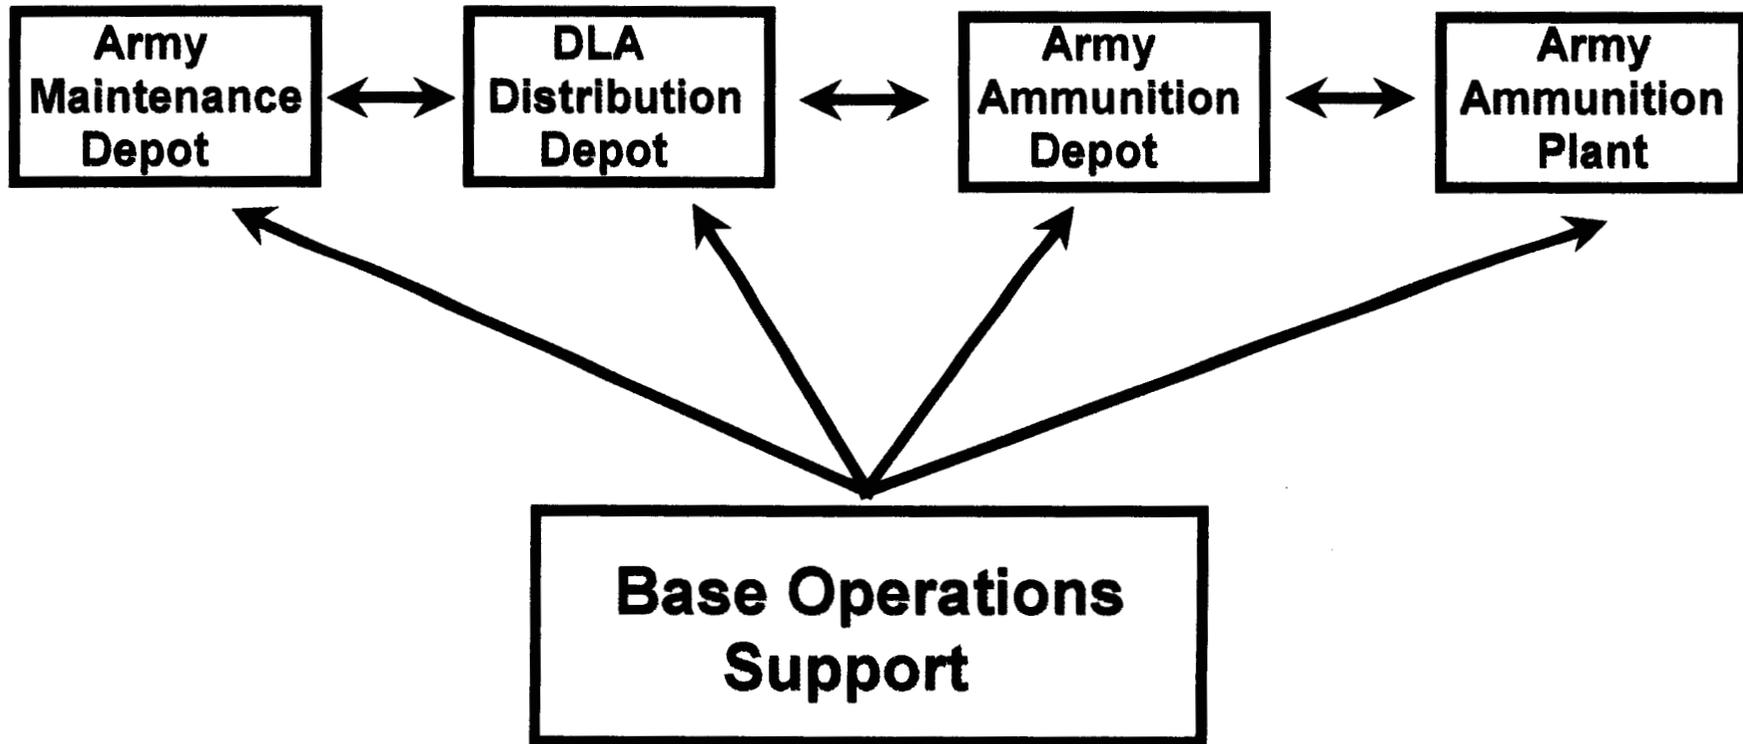

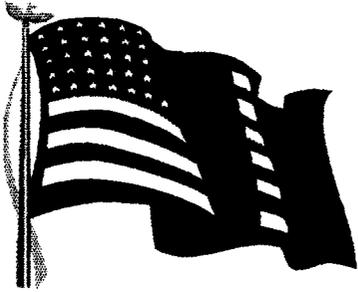

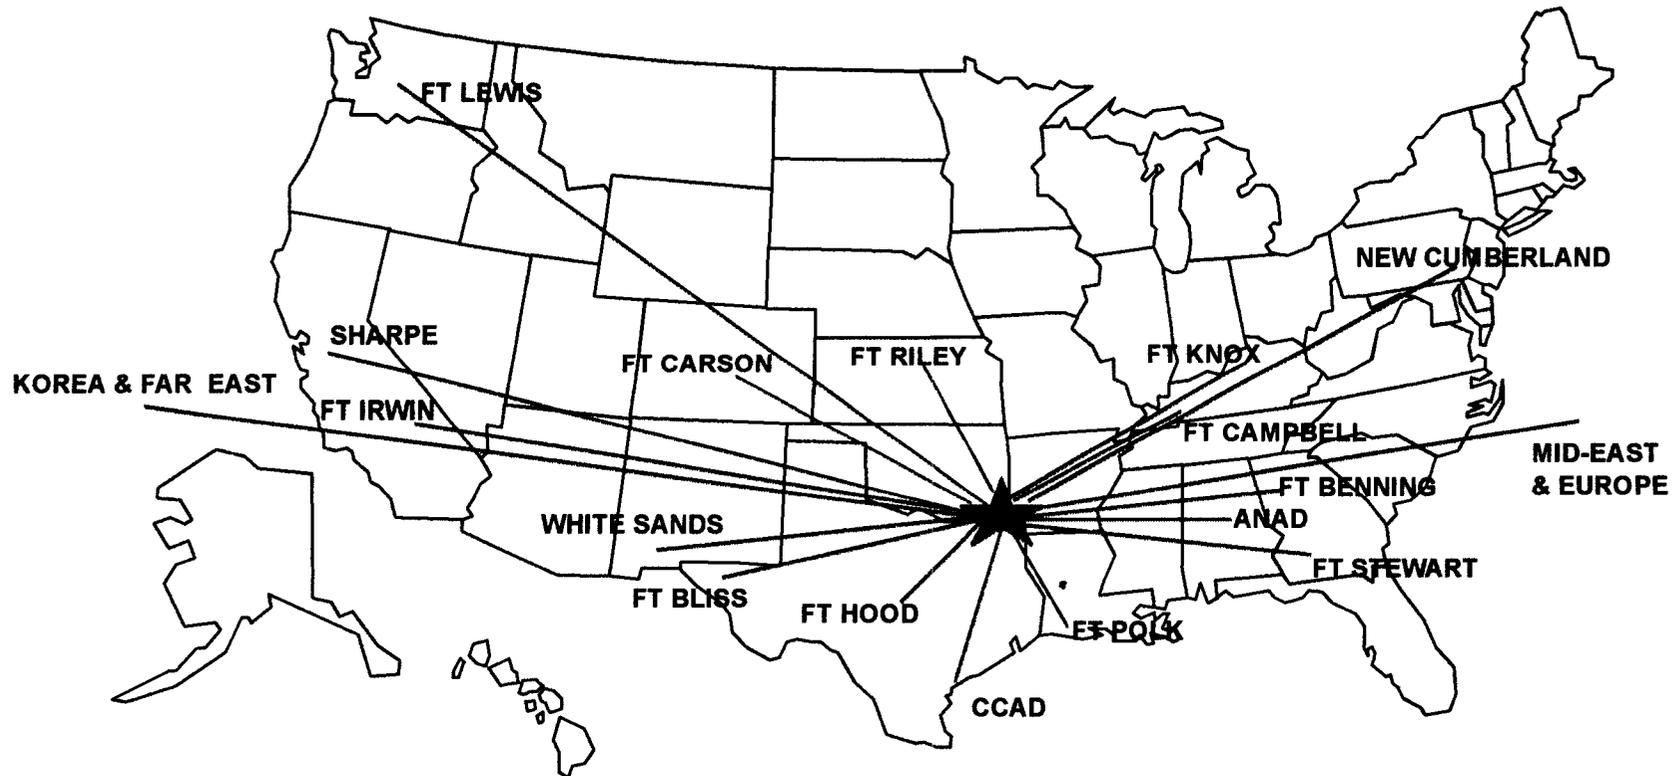

Chart 5.

This map clearly illustrates our location in relation to major customers. We are in the center of the United States and because over 50% of all stateside military posts, camps, and stations are located in the central United States, we provide cost efficient one day delivery to most of our customers.

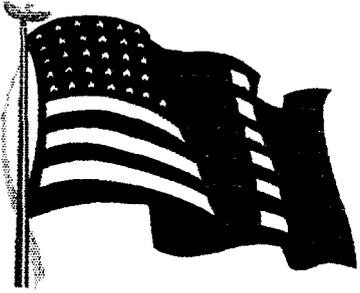

Red River's Major Customers

Over 50% of all stateside military posts, camps, and stations are located in the Red River central distribution area

Chart 6.

In looking at our top ten distribution locations, the importance of our central location is further amplified. Fort Hood, our number one customer, accounts for 17.6% percent of our total workload. The Army maintenance mission at Red River is not in the top ten - yet DLA stated that the Maintenance Depot is by far their biggest customer and primary reason for DLA presence. While that is the case for most depots, you can see this is not the case at Red River.

Distribution Destinations

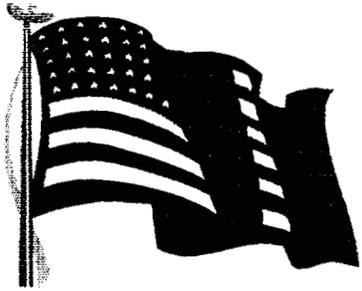

<i>Ranking</i>	<i>Location</i>
1	Ft. Hood, TX
2	Europe
3	Ft. Riley, KS
4	Korea
5	Ft. Bliss, TX
6	Ft. Sill, OK
7	Ft. Polk, LA
8	Ft. Carson, CO
9	Ft. Campbell, KY
10	Ft. Rucker, AL

Chart 7.

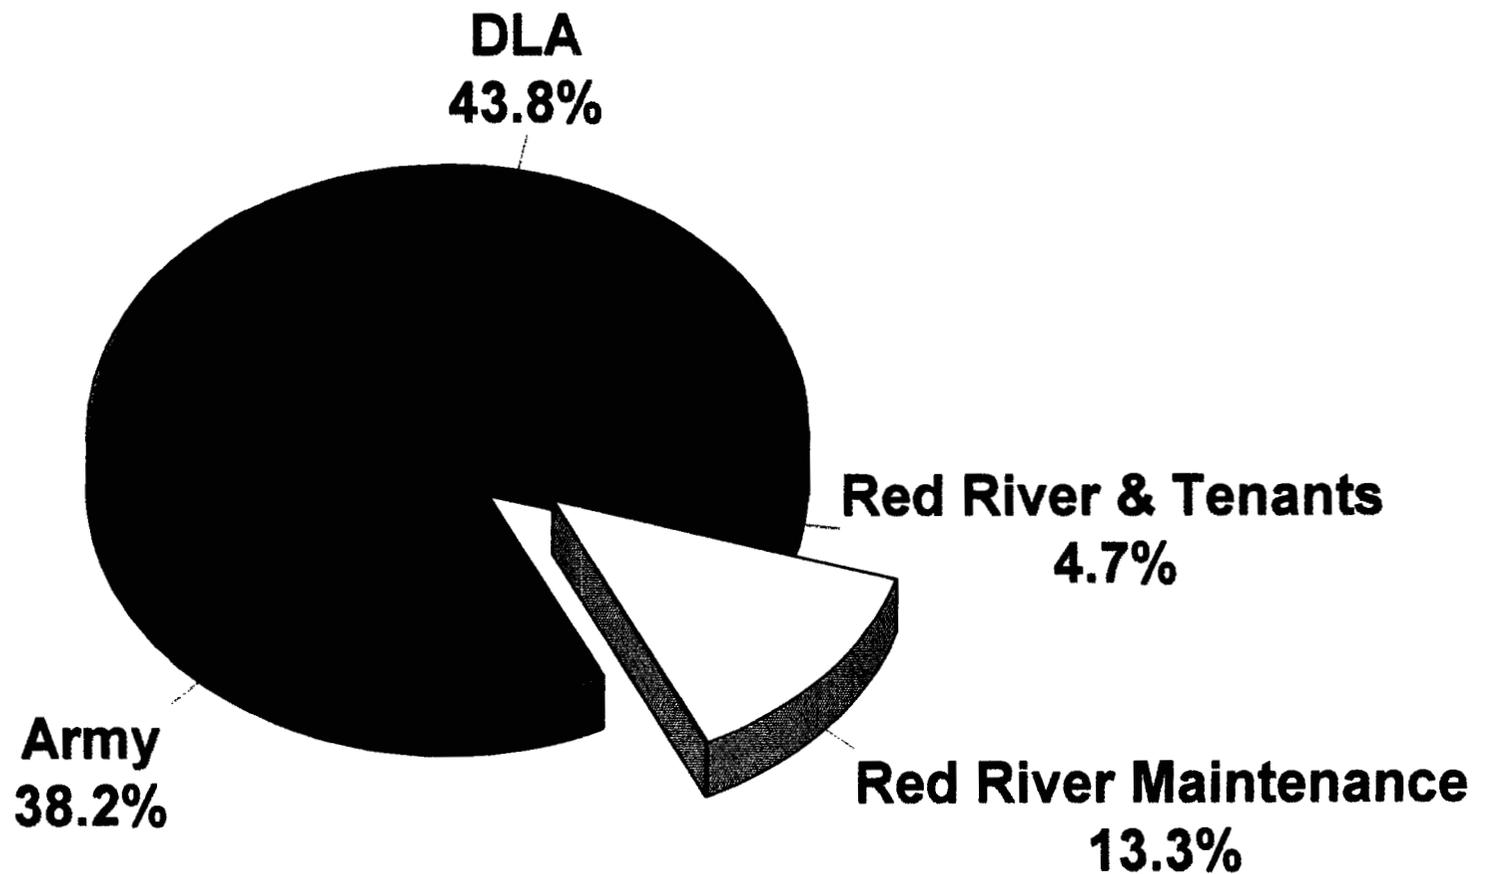

This chart shows the actual profile of the material in storage at Red River.

This material is valued at over 6.4 Billion dollars. You will note that the actual percentage of material in storage to support Red River Maintenance is only 13.3%. Another 4.7% is for other local customers.

The bulk of the material, 82%, is in support of customers external to the Complex. This again, contradicts DLA's contention that the maintenance activity is the Distribution depot's primary mission.

Profile of Assets in Storage

% LINES

As of 31 Jan 95

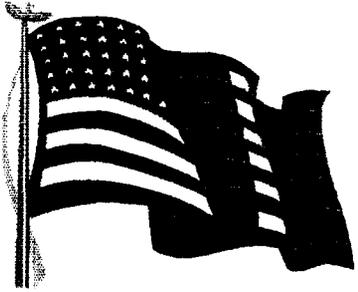

7
(4/12/95)

Chart 8.

Included in the material stored at Red River are over 8,000 vehicles. If we were to vacate all of these vehicles and other material stored here, it would require approximately 19,000 commercial trucks. In fact, we estimate that it would require a convoy of trucks reaching from here to California. Imagine that!

The cost of movement of this stock was not included in the Army analysis.

Now let's look at our maintenance operations.

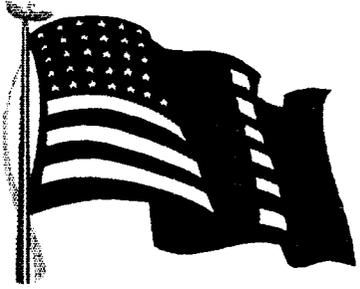

Vehicles in Storage

Category	Ready to Issue	Repairable	Non-Repairable	Weight (Tons)
Tactical	1,558	908	23	23,016
Combat	1,262	4,662	10	83,335
Repair & Return				
-- Natl Guard		66		693
-- FORSCOM		15		158
TOTAL	2,820	5,651	33	107,202

Note: As of 27 Mar 95

Chart 9.

DoD's core weapon systems assigned to Red River for depot maintenance are shown here. The core systems are the systems that are required to support the Army's war fighting capability. Letterkenny is responsible for one tracked vehicle core system, the self-propelled Howitzer and Anniston has only one, the M-1 tank.

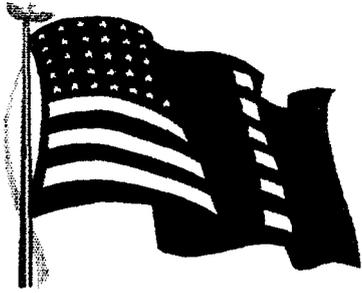

Depot Maintenance ***for DoD's "CORE" Weapon Systems***

- **Bradley Fighting Vehicle System**
- **Multiple Launch Rocket System**
- **M113 Family of Vehicles**
- **Fire Support Team Vehicle**
- **Heavy Equipment Transporters**
- **M9 Armored Combat Earthmovers**
- **Palletized Load System**
- **Reverse Osmosis Water Purification Units**

Chart 10.

Speaking of numbers, when you are looking at an Army Mechanized Division over three fourths of the tracked vehicles for the Army are maintained at Red River. The other 23% is split between Letterkenny and Anniston. No analysis was conducted by Army to consider moving the remaining 23% to Red River even though we have past experience in overhauling tanks and Howitzers.

We can still do that work.

Army Mechanized Division Structure

• Bradleys	311
• Multiple Launch Rocket System	9
• M113 Family of Vehicles	706
• M1 Abrams	255
• M109 Howitzer	72
• M9 Armored Combat Earthmovers	64

***We support 77% of all tracked vehicles in a typical
mechanized division.***

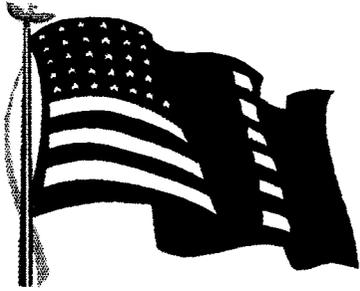

Note: Items highlighted in red represent core systems supported by Red River Army Depot

Chart 11.

This is a summary of the Army's total fleet of vehicles that will be maintained at Red River under the new force structure. There is no plan to buy new vehicles. We must maintain what we have.

At the current production rates it will take 24 years to cycle the entire fleet through the depot for overhaul. If this work is moved to Anniston, they will be overloaded and the cycle time will increase.

Can the Army's readiness afford that? Would you drive a car that long without an overhaul?

Fleet Densities

10 Division Army

Bradleys	6,724
-----------------	--------------

Multiple Launch Rocket System	747
--------------------------------------	------------

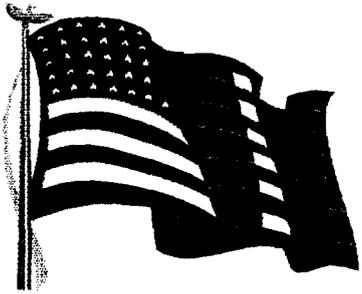

M113 Family of Vehicles	17,353
--------------------------------	---------------

TOTAL	*24,824
--------------	----------------

****Current Production Rates = 24 Year Cycle***

Chart 12.

With our personnel and their unique knowledge, we have the capability and capacity to support an emergency wartime requirement. What these figures show you is that with the vehicles on hand, we can equip an entire division within six months. Under the Army's proposal to eliminate infrastructure, it is doubtful that this could be accomplished with only one depot. Because we have the unique knowledge base, we can respond instantly. If that knowledge base is lost, which will occur under the current plan, our soldiers will be in trouble if there is an emergency.

Unique Capability to Support Logistics Power Projection

- **Unserviceable Assets at RRAD**
 - **Bradleys - 732**
 - **M113 Family of Vehicles - 2,553**
- **Power Projection Capability***
 - **Bradleys - 50/Month**
 - **M113 Family of Vehicles - 200/Month**

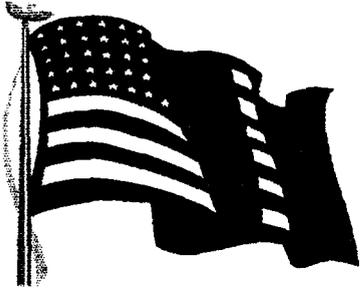

****With current infrastructure, capability exists to equip
one division within six months***

Chart 13.

Let me give you some examples of how we use our unique knowledge to support the soldier. We routinely send teams from both the maintenance and distribution operations throughout the world to support our troops. They repair and modify the vehicles, provide supply support, train our soldiers and also support our foreign allies.

During Desert Storm, we provided on-site support to deploying units throughout the United States. We also provided support to our soldiers in the desert. A classic example was the modification of our rocket system, the Multiple Launch Rocket System, to allow it to fire long range. Some of you may recall seeing the rocket attack on CNN referred to as "the night of steel rain." Our technicians' support made this possible and directly contributed to the allied victory.

After the war, as part of the Force Reconstitution effort, many of the vehicles were cycled through the depot for repair prior to return to the using units here in the United States.

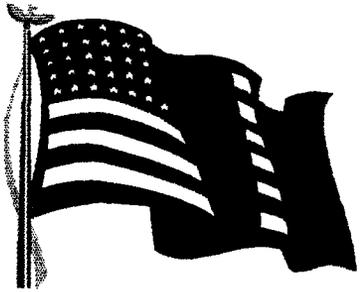

Knowledge Base

- **Technical support to the field**
- **Mobilization support**
 - **Deploying units**
 - **In Theatre**
- **Force Reconstitution**

***Rapid response within 24 hours to any location -
World Wide***

Chart 14.

This chart summarizes my briefing. Congressman Chapman will now discuss the community plan and show why it makes absolutely no sense, for the soldiers or the taxpayers, to close what the Commanding General has called the Flagship Enterprise of the depot system.

Summary

- **Depot With Three Major Missions**
- **50% of Distribution Customers in Central United States**
- **Maintenance Support of 77% of Army Mechanized Division Tracked Vehicles**
- **Unique Body of Rapidly Deployable Knowledge**

Chart 1 - Community Case

Introduction

Good afternoon Commissioners, members of your staff, ladies and gentlemen. I am Congressman Jim Chapman, Representative of the First Congressional District of Texas. It is a pleasure to have this opportunity to appear before you today. I know you have a very busy schedule and I appreciate the challenges that you face in reviewing the services recommendation for BRAC 95. You have seen the short video and Dr. DuVall's presentation which clearly shows the importance of Red River to the defense of our nation and that closure of the installation is not in DoD's best interest.

My purpose today is to present information that will assist you in getting to the truth so that you can reach the right decision in regards to our installation.

Red River Defense Complex

People With A Vision Proudly Creating Excellence

Briefing: Community Case
Presented By: Congressman Jim Chapman

Chart 2 - Community Concerns

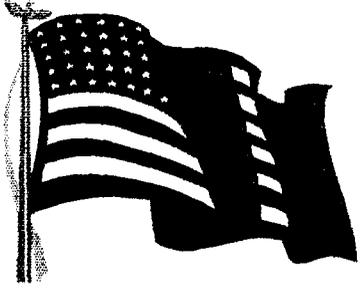

We have obtained the Army and DLA data that are the baseline for their decision to recommend closure of Red River Army Depot and disestablishment of Defense Distribution Depot Red River. Our review of this data has led us to conclude that DoD's overall analysis is flawed.

I led a delegation to the Pentagon on January 05, 1995. We briefed Deputy Assistant Secretary of Defense Robert Bayer and Under Secretary of Army Joe Reeder on Red River's military value and specifically requested that they evaluate Red River as a single defense complex inclusive of Red River Army Depot, Defense Distribution Depot Red River, and the other tenants.

That did not happen!

The Army and DLA analysis of military value and cost were reviewed separately and independently. There was no assessment of the combined military value nor an assessment of the combined cost or COBRA analysis conducted.

Red River is the only Army depot with a large co-located DLA distribution mission and several large tenants. Red River does not fit the standard army depot maintenance model nor the standard DLA co-located supply support to depot maintenance model. Because of this, the true military value of this installation and the total cost for closure was not considered.

Community Concerns

- **DoD analysis is flawed**
- **Community formally requested the analysis consider Red River as a military complex**
- **That did not happen**

Chart 3 - Flaws in the Army Methodology

We have also discovered several flaws in the Army methodology and COBRA analysis.

- Savings are overstated

First of all, Army savings being claimed as BRAC savings include reductions in personnel strength that are a result of force structure reductions and have nothing to do with BRAC. This was verified by the April 17, 1995, GAO Report. We estimate that the savings may be overstated by as much as \$116 million due to workload reductions and other base operations cost. When you look at the Red River and Anniston workload reduction between FY96 and FY99, 72% of the workload reduction is at Anniston with only 28% reduction at Red River. This would suggest we are downsizing/closing the wrong installation.

- Costs not included

There are also costs of closure that have not been included in the Army analysis. DLA's decision to close Defense Distribution Depot Red River was based solely on the Army's decision but the Army analysis did not include the cost of disestablishment of Defense Distribution Depot Red River and relocation of their stock.

We estimate that the DLA relocation cost to be \$319 million. This includes relocation of almost 14,000 vehicles and about 120,000 tons of mission stock. The cost of construction (MILCON) required at Anniston to accept the maintenance and distribution mission was not included. A conservative estimate of \$34 million is based on DLA's estimate of \$19 million for hardstand and the Department of Defense Joint Service Group estimate of \$15 million for relocation of combat vehicle workload to Anniston. We believe additional construction will be required since Anniston is shown as having zero excess supply capacity and ranks last of all depots in the Future Requirements (expansion capability) part of the military value model.

- Requirements not considered

Other requirements that were not included in their cost of closure analysis are the supply, preservation and packaging, and storage requirements in support of the rubber products mission currently performed by DLA.

Also, the fact that tenant support such as medical services, property disposal, and calibration are still required in support of the remaining rubber and ammunition missions.

The Defense Finance Accounting Service Non-Appropriated Fund Accounting Office and Army Missile Recertification Office were not considered.

Flaws in Army Methodology

- Savings are overstated
 - Non-BRAC savings are included \$116 million

- Costs not included
 - DLA relocation \$319 million
 - Construction requirements at Anniston \$ 34 million

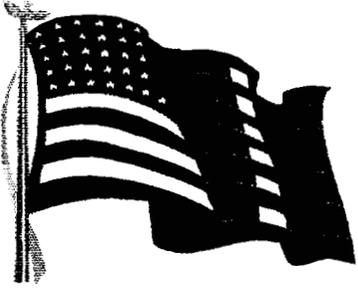

- Requirements not considered
 - Supply/storage support for Rubber Products
 - Tenant support of enclaved and other operations
 - Non-appropriated Fund Accounting
 - Missile Recertification Office

Chart 4 - Flaws in the DLA Methodology

We have found several flaws in the DLA methodology. First, DLA's Military Value ranking criteria placed Red River 5 of 17 in the Co-located Military Value matrix. That ranking was based on Red River's support to the co-located maintenance operation. Red River would have scored higher on military value except that DLA's model penalized Red River for having a large distribution mission. But DLA's military value assessment was not the basis of the recommendation.

The most serious flaw is that DLA's decision to close Defense Distribution Depot Red River was driven by the Army recommendation to close Red River Army Depot. The DLA justification states, ". . . the primary reason for their existence is to provide rapid response in support of the maintenance operation." While this is true at other Army depots, the facts simply do not support that justification at Red River. Only 13% of Defense Distribution Depot Red River business is with the maintenance operation, 5% is with other local customers, and 82% is in support of the world-wide distribution mission.

And finally, the decision was not based on cost/savings.

Flaws in DLA Methodology

- **Evaluated as co-located depot. No credit was given for distribution mission to external customers.**
- **Decision based solely on Army recommendation to realign maintenance mission**
- **Decision not based on cost/savings**

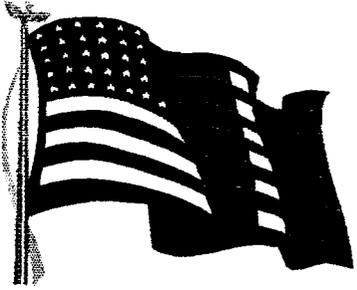

Chart 5 - Return on Investment

As a result of the flaws I have just addressed, I take issue with the Army's calculation on return on investment. The Army says they will receive an immediate return on investment. This is simply not the case. Using DoD data we estimate that the return on investment will be 57 years, four years longer than this fine installation has been in existence. What a travesty if we let this happen. It simply does not make sense!

Let me give you a little more detail on the computations. When you take out the savings claimed by the Army that are the result of Force Structure changes not BRAC, the only real savings that would accrue are base operations or overhead personnel. This is 337 personnel or \$13.1 million per year. The Army falsely assumed that the direct labor manhours performing the mission could be eliminated but the manhours will be needed by Anniston. The community used the Army's estimate for recurring cost which includes the base operations personnel required to support the remaining operations enclaved to Lone Star Army Ammunition Plant. The annual net savings is \$7.3 million. We believe the one-time cost is understated by \$319 million for relocation of DLA stocks, associated personnel costs, and equipment relocation, and \$34 million of construction required at Anniston. When the one time cost is divided by the annual net savings, the results of return on investment is 57 years.

If you look at the column on the right, we have also computed the return on investment assuming the DLA mission remains at Red River and only the Army Maintenance mission is moved to Anniston. The recurring savings is based on elimination of 237 base operations or overhead personnel for \$9.2 million per year. Again, the direct labor manhours performing the mission at Red River will be needed at Anniston. The Army falsely assumed they would not be needed and claimed them as BRAC savings. The one-time cost is understated by \$34 million for additional construction required at Anniston and \$52.1 million for relocation of the core tracked vehicles and associated repair parts. This gives a return on investment of 43 years. In all cases, the Army failed to include the cost of transfer of the core tracked vehicles and associated repair parts.

Simply stated the economics do not support relocation of either the DLA distribution mission or the Army maintenance mission. We believe DoD substantially deviated from the Final Selection Criteria Number 5 - Return on Investment.

Return on Investment

Community Estimate

	Army (\$M)	RRAD Complex (\$M)	Army Maint* (\$M)
Recurring Savings	\$129.0	\$13.1	\$9.2
Recurring Cost	<u>\$5.8</u>	<u>\$5.8</u>	<u>\$5.8</u>
Annual Net Savings	\$123.2	\$7.3	\$3.4
One Time Cost	\$59.6	\$412.6	\$145.7
Return on Investment	Immediate	57 years	43 years

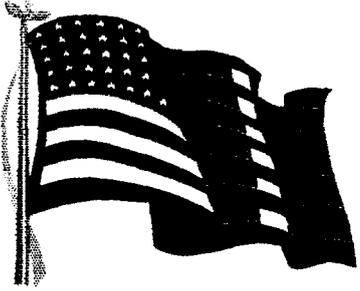

*Assumes DLA remains at Red River

Chart 6 - Profitability

MG Benchhoff, Commander of the Installation Operations Command, considers the profitability (Net Operating Result) as the primary depot performance measure.

The profitability (Net Operating Result) is simply the difference in the revenue received from customers for products produced, such as Bradley Vehicles, minus the expenses of producing the products.

As the depots increase efficiency and reduce expenses, they in effect generate a "profit." This "profit" is returned to the customers the next year through lower prices.

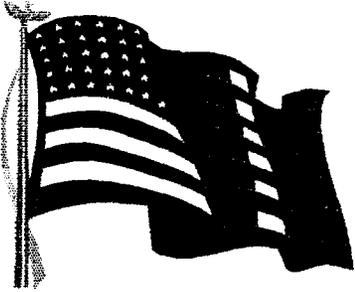

Profitability

"I consider the planned annual net operating result (NOR) as the primary depot performance measure, therefore we should reward positive variances from the planned NOR."

DENNIS L. BENCHOFF
Major General, USA
Commanding, 20 Jan 94

Chart 7 - Profitability

This chart depicts the performance of the depots during FY90 - FY94. Results charted are the difference between each depot's planned Net Operating Result and the actual accomplishment. Red River was by far the most profitable of the three vehicle maintenance depots (Anniston, Red River, Letterkenny).

Profitability

Cumulative FY90 -- FY94

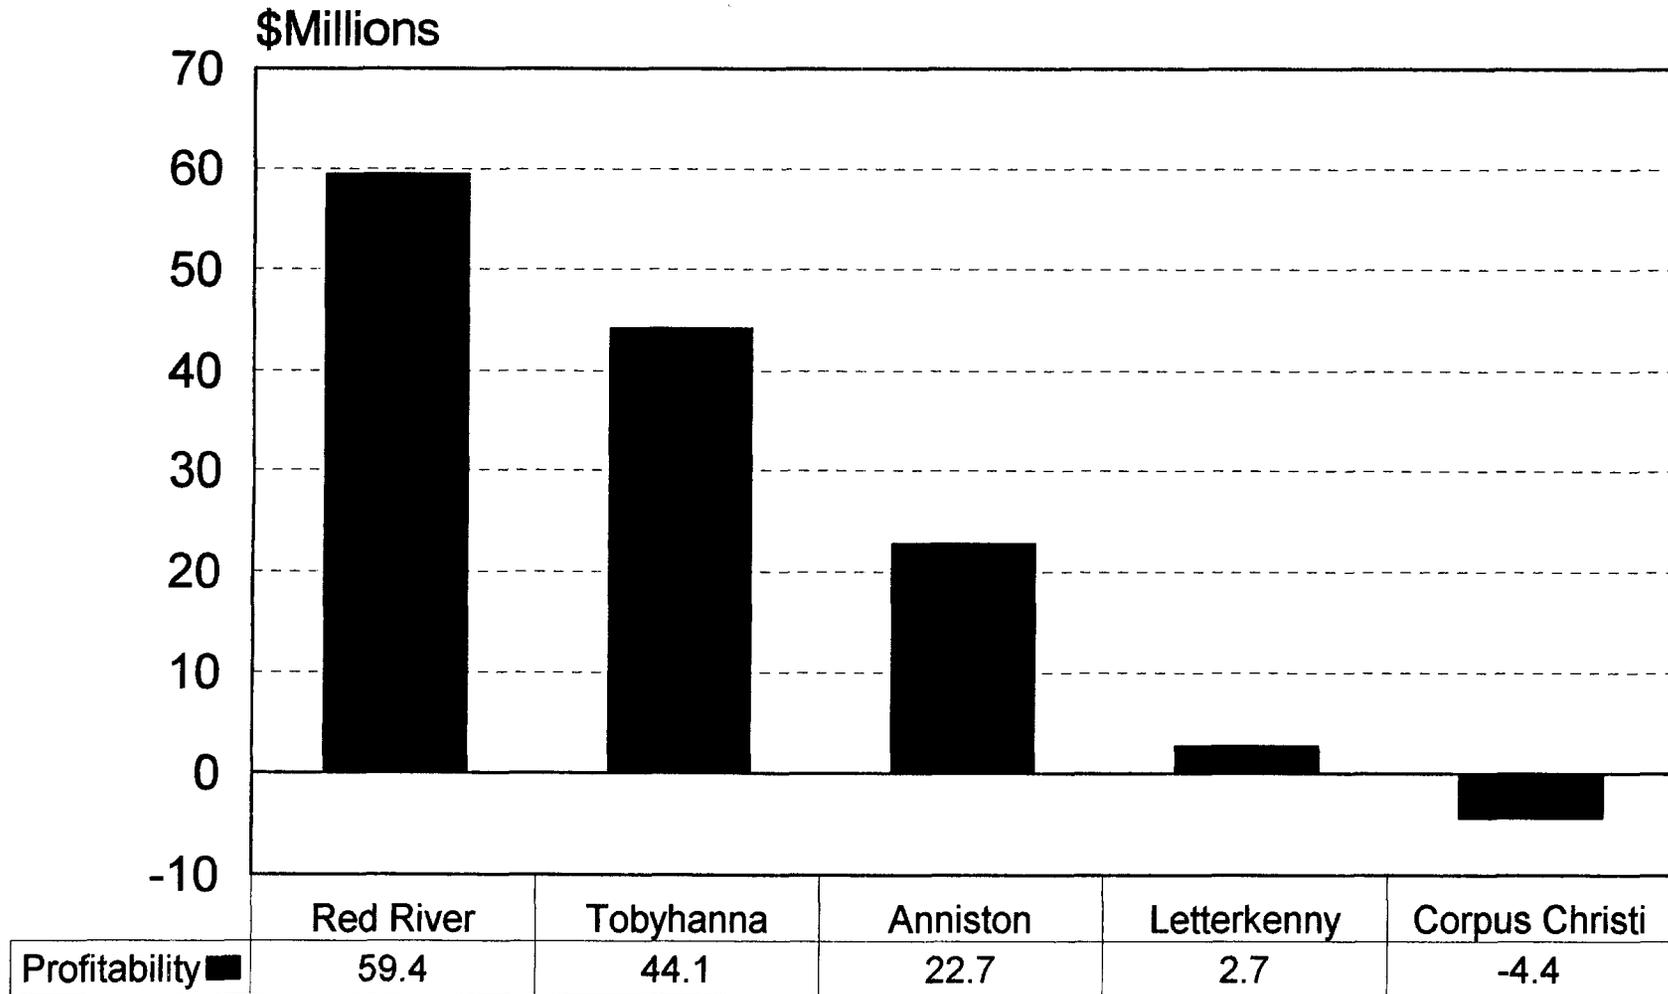

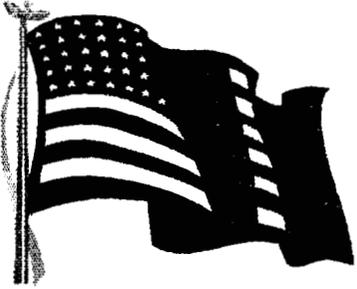

CHART 8 - WHERE WE ARE

Here's where we are. The Army has three vehicle maintenance depots Red River, Anniston, and Letterkenny. The recommendation is to close Red River, realign Letterkenny, and retain Anniston as the Army's only vehicle maintenance depot. The FY 99 workload projection supports the need for 1.75 depots not 1. I personally believe the workload may be understated and here's why. During the 1980's and 90's the Army bought thousands of new weapon system vehicles. Now, very few new vehicles are being procured. As the vehicles continue to get older, the maintenance requirements go up. Since the Army's estimate of maintenance workload is based on past experience, it could be significantly understated.

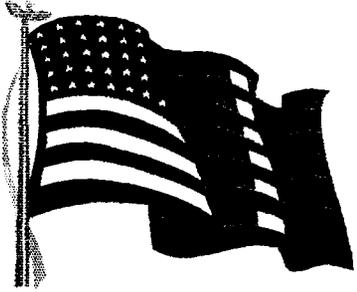

Where We Are

- **Maintenance depots are required to sustain readiness**
- **Army has three vehicle maintenance depots**
- **Army recommends closure/realignment of two depots**
- **Workload will support 1.75 depots***

Chart 9 - Where We Are (continued)

In addition, distribution depots are required to maintain readiness. Approximately 50% of the CONUS troops are stationed in the Central United States and 80% of Red River's distribution mission is in the support of external customers.

Where We Are

(Continued)

- **Distribution depots are required to sustain readiness**
- **Approximately 50% of CONUS troops are stationed in the Central United States**
- **80% of Red River distribution mission is in support of external customers**

CHART 10 - WHAT WE NEED TO DO

I believe this is what we need to do.

First, we should follow the concepts recommended by the Defense Science Board in April of 1994. The Board, made up of senior defense military and industrial leaders, identified excess depot maintenance capacity, the need to downsize to CORE workload, and the need to preserve both the organic and industrial base.

The community and I believe that we have a plan that will achieve the desired result. We believe the Army should retain its two most efficient vehicle depots Red River and Anniston. Downsize both to CORE workload. This would maintain the knowledge base and readiness level that will be lost for many years if transferred.

The Army should realign Letterkenny's track vehicle and missile maintenance workload to Red River and Anniston. Both Red River and Anniston have existing missile facilities and skills available to accommodate the missile workload.

We should then partner with industry. The Defense Science Board recommended that maintenance and overhaul of CORE systems be retained in the depots and modification and upgrade be reserved for industry. The most efficient approach is to perform any modification and upgrade at the time of overhaul. By teaming with industry and providing excess depot facilities for industry use, the Army can help preserve both the organic and industrial skill base.

Red River and United Defense, producers of the Bradley and M113 Family of Vehicles, have already explored some possible teaming arrangements. Both parties believe the concept is a very good one. An agreement where Red River will serve as a sub-contractor to United Defense on the M113 A2/A3 conversion program has been completed and work began at Red River this week.

And finally, we need to maintain the distribution mission at Red River.

What We Need To Do

- **Follow concepts recommended by the Defense Science Board Task Force on Depot Maintenance Management, April 1994**
- **Retain two most efficient vehicle depots**
 - **Red River**
 - **Anniston**
- **Downsize both to CORE workload**
 - **Maintain knowledge base**
 - **Maintain readiness level**
- **Realign Letterkenny vehicle and missile workload to Red River and Anniston**
- **Team with industry**
 - **Preserve industrial base**
 - **Increase capacity utilization**
- **Maintain the distribution mission at Red River**

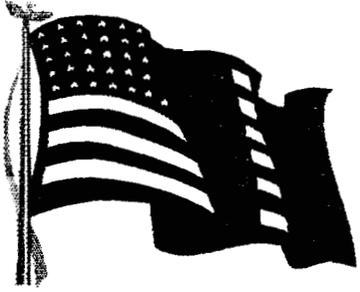

CHART 11 - EVERYBODY WINS

And best of all, Everybody Wins!

The Army, private industry, and perhaps most importantly the taxpayer. This approach will provide the CORE readiness base required at the lowest possible cost.

Ladies and Gentlemen, at this time, I want to introduce you to retired Brigadier General Pat Donovan. He is a man who knows first hand the vital role that Red River plays in the Army's readiness posture. General Donovan is a former commander of Red River Army Depot. He was the program manager for the Army's light combat weapons systems: the Bradley and M113 Family of Vehicles maintained at Red River. He was also the project manager for the M60 Tank maintained at Anniston.

I also want you to know that he is here today, not as a paid consultant, but as a man concerned about the Army's readiness and because it's the right thing to do....General Donovan.

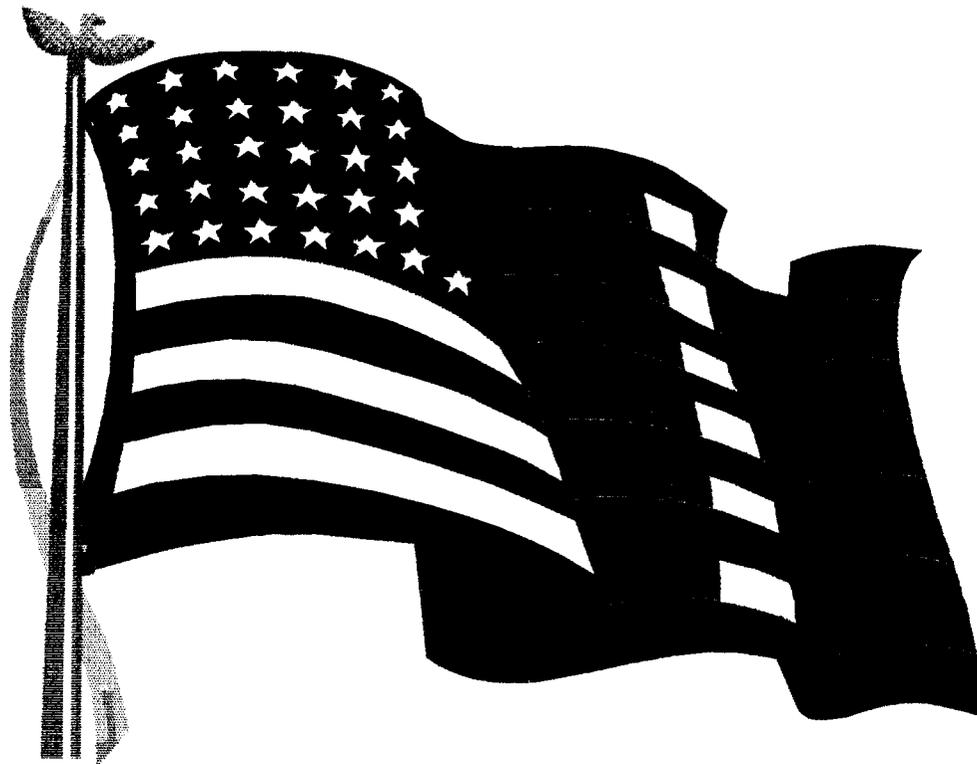

Everybody Wins

- Army
- Private Industry
- Taxpayer

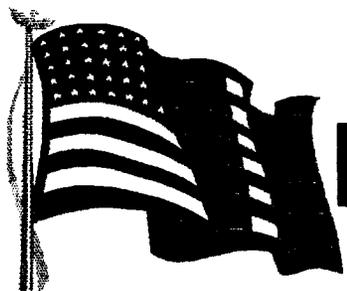

Red River Defense Complex

People With A Vision Proudly Creating Excellence

Briefing: A Soldier's Perspective

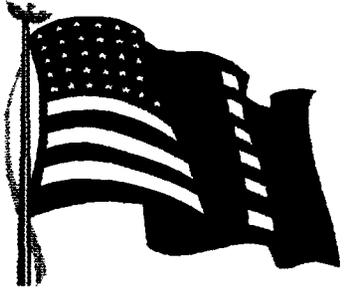

Presented By: General Claude B. Donovan, USA (Ret.)

Readiness and Sustainability

Foundation For DoD Depot Maintenance

Flexible and responsive depot maintenance contributes significantly to the operational readiness and sustainability of United States combat forces. It is essential for national defense that Department of Defense activities maintain a logistic capability (including personnel, equipment and facilities) to ensure a ready and controlled source of technical competence and resources necessary to ensure effective and timely response to a mobilization, . . . contingency, . . . or other emergency requirement.

Readiness and Sustainability

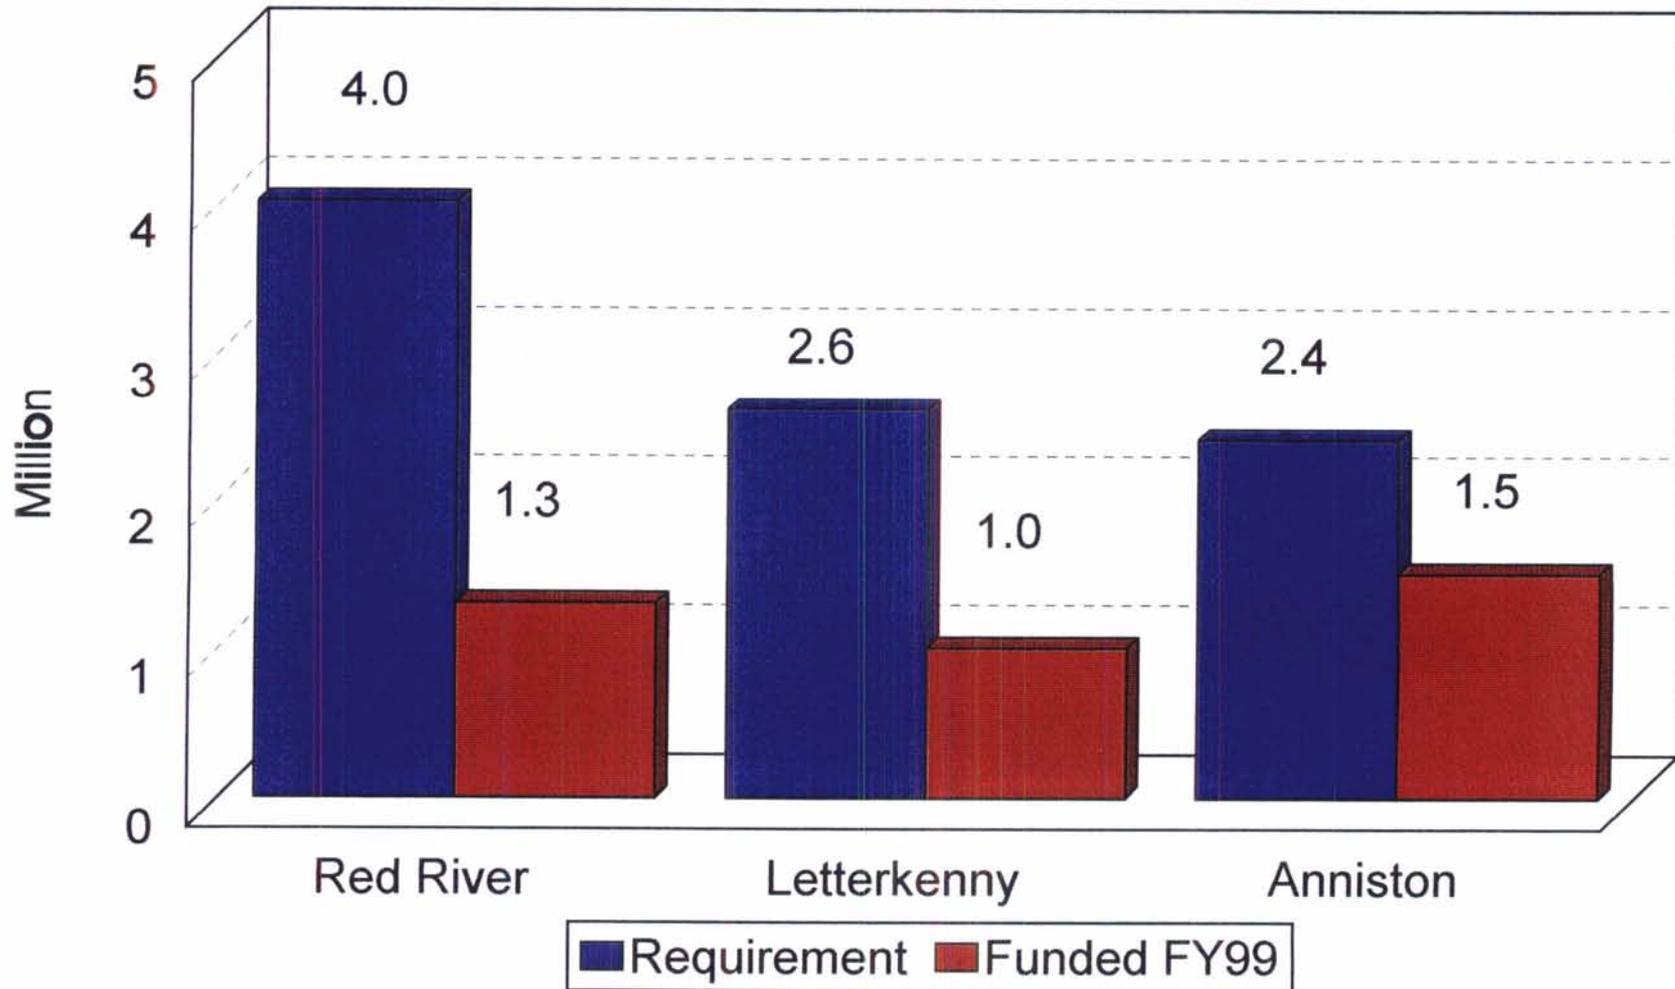

Foundation for DOD Depot Maintenance

"Organic depots exist to support the readiness and sustainability requirements of United States combat forces. It is essential that DoD maintenance depots provide flexible and responsive depot maintenance support capabilities in consonance with Service Secretaries' Title 10 readiness responsibilities. The Task Force supported this vital role of the DoD organic depots, agreeing that there is an irreducible minimum of depot maintenance capability that must be provided by organic depots. These capabilities, defined as CORE, comprise skills, competencies and facilities that must exist in organic depots and shipyards. CORE requirements are derived by each Service in an analytical manner as support requirements related to current military strategies (e.g., force structure and the Joint Chiefs of Staff two major regional conflict scenario). The Task Force agreed that the CORE concept is the correct approach to derive essential organic depot maintenance capabilities, and all but the Air Force agreed that it is a vital role of each Service to provide for the organic depot support of its CORE capabilities."

AMC Core Workload

Direct Labor Hours

BRAC 95

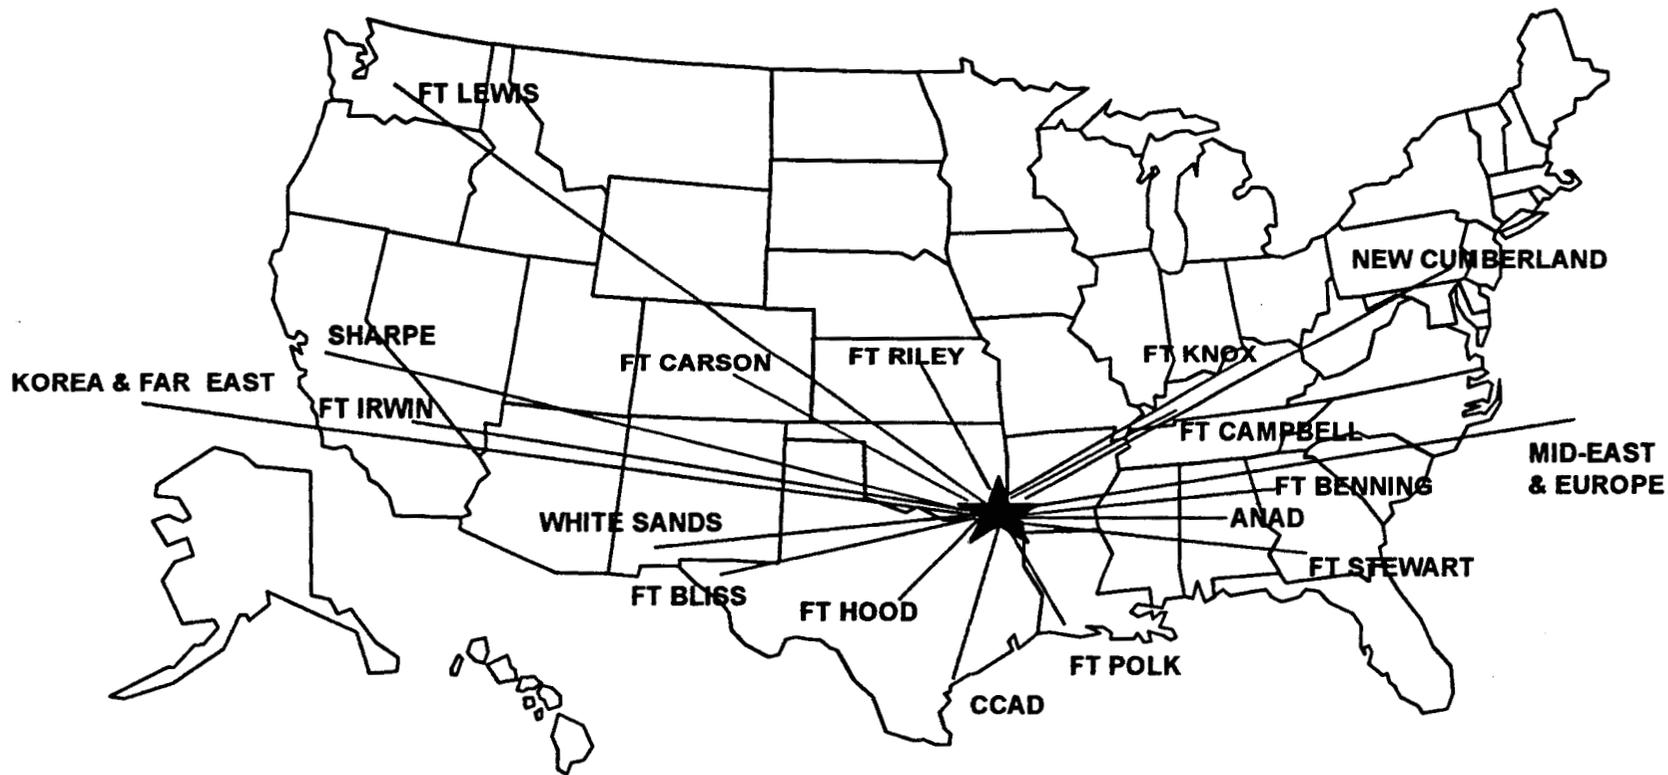

Impact on Depot Capacity

	<u>FY99 Workload</u>	<u>Capacity Index</u>	<u>Utilization Index</u>
Red River	1.493	3.233	46%
Anniston	1.763	3.200	55%
Letterkenny	1.961	2.485	79%
	<u>5.217</u>	<u>8.918</u>	<u>58%</u>
Less Letterkenny	5.217	6.433	81%
Letterkenny & Red River	5.217	3.200	163%

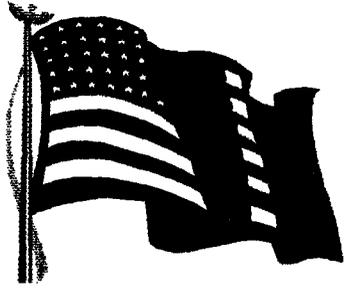

*Data Source is Defense Depot Maint Council Business Plan, FY95-99

Red River's Major Customers

Over 50% of all stateside military posts, camps, and stations are located in the Red River central distribution area

What We Need To Do

- Follow concepts recommended by the Defense Science Board Task Force on Depot Maintenance Management, April 1994
- Retain two most efficient vehicle depots
 - Red River
 - Anniston
- Downsize both to CORE workload
 - Maintain knowledge base
 - Maintain readiness level
- Realign Letterkenny vehicle and missile workload to Red River and Anniston
- Team with industry
 - Preserve industrial base
 - Increase capacity utilization
- Maintain the distribution mission at Red River

Red River Military Value

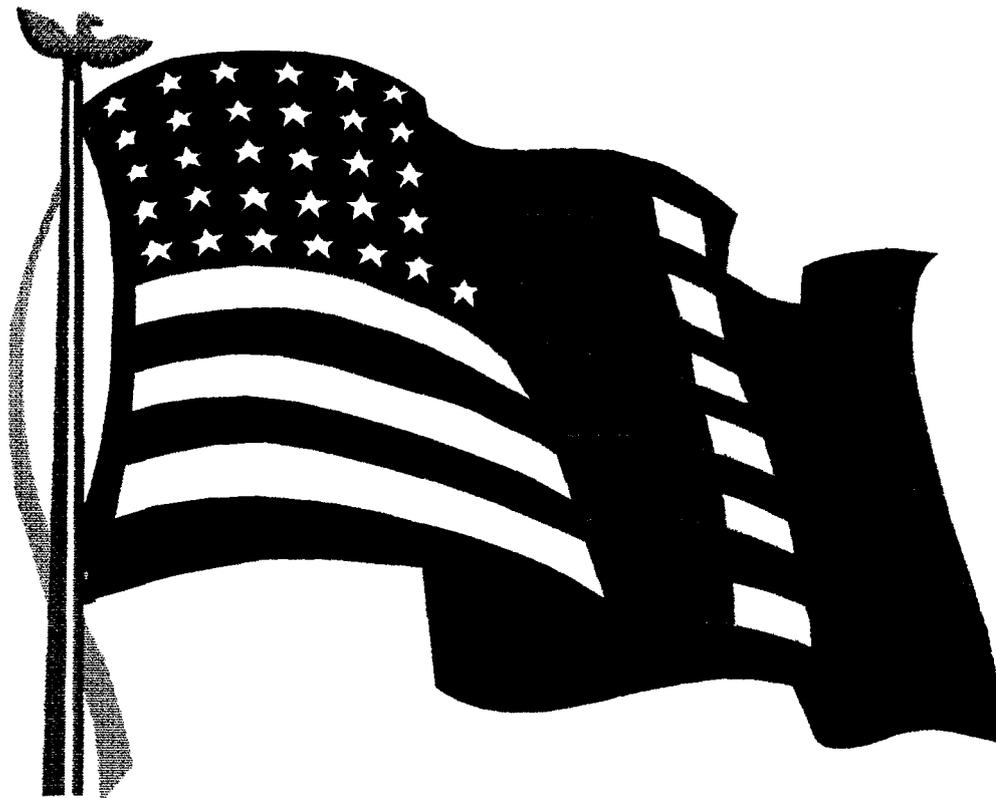

"Co-located with Red River Distribution Depot and Lone Star Army Ammunition Plant, Red River Army Depot plays a vital role in our nation's military. The vehicle maintenance work done by Red River, the worldwide supply mission performed by its Defense Logistics Agency tenant facility, and the quality munitions produced by Lone Star constitute a unique complex serving our nation with exceptional distinction."

Vice President Al Gore

Source: Memorandum, dated February 3, 1995, to The Honorable William Perry,
Secretary of Defense

Red River Defense Complex

People With A Vision Proudly Creating Excellence

Briefing: Community Impact
Presented By: Robert E. "Swede" Lee

BRAC Impact

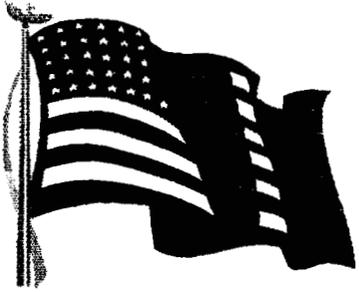

- Highest economic impact of any closure
- 10% of the total civilian job cuts in BRAC 95 are at Red River
- Projected job losses equal 13.6% of total employment
- Area unemployment rate increases to 21.7%

Red River Defense Complex

People With A Vision Proudly Creating Excellence

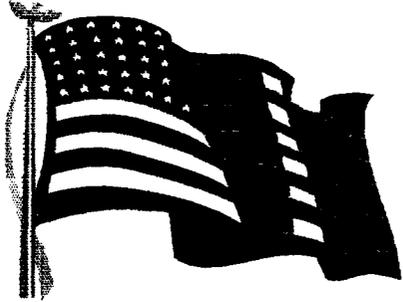

Briefing: Closing Remarks
Presented by: Senator Kay Bailey Hutchison

Closing Remarks

- Closing Red River jeopardizes readiness
- DoD, Army, and DLA analysis flawed
- Return on investment is not there
- Fully support the community plan

Synopsis of the Red River Case

1. DoD substantially deviated from Final Selection Criteria

- **Military Value (Criteria 1 and 4)**
 - Recommendations overload Anniston, limit surge capacity, and jeopardize readiness
 - No combined assessment of military value of Red River and Defense Distribution Depot was developed
 - Army and DLA conducted separate and independent analyses
- **Return on Investment (Criteria 5)**
 - Army cost understated
 - \$319 million for DLA relocation
 - \$ 34 million for Anniston construction requirements
 - Army recurring savings overstated by \$116 million
 - DLA decision to disestablish Defense Distribution Depot was based on Army's recommendation to close Red River, not cost
 - Return on investment is 57 years, not immediate as claimed by Army
 - Army analysis was flawed by omission of significant mission requirements such as Missile Recertification

2. Community Proposal

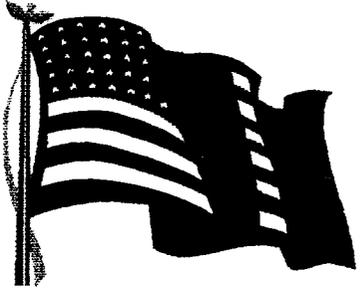

- Retain Red River and Anniston
- Realign Letterkenny workload to Red River and Anniston
- Downsize to core
- Team with industry

Red River Defense Complex

People With A Vision Proudly Creating Excellence

Briefing: Red River - A Quality Depot
Presented By: Robert Barnes

Red River Army Depot

A National Quality Leader

- Formally named Winner of 1995 Federal Quality Improvement Prototype Award by the Federal Quality Institute, 2 March 1995
- Federal sector award criteria synonymous with Malcolm Baldrige Award
- Importance of award lies with the accomplishments during pursuit
- Depot Recognized as a Quality Leader by:
 - Vice President Gore (National Quality Conference, July 1994)
 - National Partnership Council
 - Government Executive Magazine (July 1994)
 - Federal Times Newspaper (18 July 1994)
 - September 1994 Status Report of National Performance Review

Red River Army Depot

A "Unique" Quality Team

- Successful in spite of downsizing, major reorganization, and BRAC threats
- Most important asset is the summation of the members as one unique team
- Quality should be a part of the BRAC Criteria
 - Quality products
 - Performance efficiency
 - Responsiveness and readiness to customers

OFFICE OF THE VICE PRESIDENT

WASHINGTON
February 3, 1995

95 FEB 10 PM 12:02

CDN
WHITE HOUSE LIAISON

The Honorable William Perry
Secretary of Defense
Department of Defense
The Pentagon
Washington, DC 20330

Dear Mr. Secretary:

I want to bring to your attention the outstanding performance record of Red River Army Depot in Texarkana, Texas.

As you may know, I recently recognized Red River with the prestigious "Six Dollar Hammer Award" to honor the installation's leadership in the Administration's effort to reinvent the way the federal government serves the American people. Red River Depot exhibits the very principles of reinvention: putting customers first, cutting red tape, and empowering employees. This installation continues to be a great model from which all federal agencies can learn and emulate. In addition, Red River is also a finalist for the 1995 Presidential Quality Award.

Co-located with Red River Distribution Depot and Lone Star Army Ammunition Plant, Red River Army Depot plays a vital role in our nation's military. The vehicle maintenance work done by Red River, the worldwide supply mission performed by its Defense Logistics Agency tenant facility, and the quality munitions produced by Lone Star constitute a unique complex serving our nation with exceptional distinction.

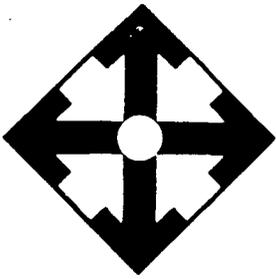

Red River Army Depot is on the cutting edge of this Administration's ambitious initiative to reinvent government based on the National Performance Review. This installation stands as a shining example of what we in government can accomplish through innovative approaches to labor-management cooperation that concentrates on empowering workers with a shared sense of vision.

Thank you for your consideration.

Sincerely,

Al Gore

Federal Quality Institute

Colonel Richard W. Hall
Commanding Officer
Red River Army Depot
ATTN: SDSRR-C
Texarkana, Texas 75507-5000

Dear Colonel Hall:

Congratulations on the selection of the Red River Army Depot as a Quality Improvement Prototype Award winner for 1995. I applaud the accomplishments of your organization.

As you know, the Federal Quality Institute's purpose in designating Prototypes is to give much deserved recognition to those organizations providing high quality products and services to their customers. The Prototypes also serve as successful models of quality improvement for other organizations.

We use a rigorous process to select the QIP winners. Individuals representing companies and government agencies that are leaders in the field of quality improvement met in October to review all of the applications. Teams of four examiners read each application, discussed its merits, and then reached consensus on a final score. Ten of the 32 applicants were selected as finalists based on these scores.

Site visits to the finalist organizations produced additional information that was used in the final judging process. Three representatives from the federal government and three from the private sector served on the panel of judges. Based on the original applications, the consensus evaluations and the site visit reports, the judges selected four QIP winners.

The examiners of your organization's application found the final score to be in the sixty-eighty percent range. The fifty percent mark is indicative of a well-planned, sound, TQM-based system that has been implemented in many areas of the organization. The one-hundred percent mark describes a world-class quality system. We have compiled the enclosed comments on the seven criteria addressed in your application from the examiners' evaluation, site visit report, and the judges' recommendation. We feel that these comments can be useful in focusing on the strengths of your quality program, as well as areas for improvement.

Total Quality Management for the Federal Government
Pension Building • 4th and F Streets, N.W. • Washington, D.C. 20001
Telephone (202) 376-3747

It is our hope that the experience gained in developing the application and hosting a site visit, along with the examiners' comments, will help you to further your quality improvement efforts.

We look forward to working with your representative to bring Red River's story to light. Dick O'Brien will be happy to talk with you if you have any questions. Please contact him at (202) 376-5047.

Sincerely,

A handwritten signature in cursive script that reads "Michele Hunt".

Michele Hunt
Director

1995 PRESIDENT'S QUALITY AWARD PROGRAM FEEDBACK REPORT

APPLICANT: Red River Army Depot

Overall Summary

The Red River Army Depot's cultural shift towards, and implementation of, quality principles the past several years has been impressive. The strengths of the organization, specifically leadership, human resource development and management, and customer focus and satisfaction, are particularly noteworthy and serve to drive overall implementation efforts.

There is a climate of high energy and spirit that begins with top leadership and cascades throughout the workforce. A well thought out and developed training strategy, emphasizing personal and team values and development, has been a critical ingredient to Red River's success.

The expectation for leadership and innovation is diffused to all levels in the organization, and discussions with hundreds of employees confirmed a sense that each cultivates a personal stake in Red River's vision for the future. Customers and suppliers alike describe Red River as an unique installation where enthusiasm, cooperation, and a "can do" attitude has evolved to "business as usual". The community stewardship of Red River was also apparent in discussions held with a number of civic leaders throughout the area.

With this strong foundation and climate in place, Red River is well positioned as they further refine quality strategies and continually move toward achieving their vision.

Opportunities for improvement include:

- Systematic linkage of customer requirements, strategic plan, operational objectives, performance/process improvements, and front-line goals and measures, and key performance measures of product and service quality.
- Systematic collection and use of customer feedback on performance against customer service standards and requirements, in a proactive mode rather than depending mainly on deficiency reports and complaints.
- Deployment of a fully integrated approach to quality implementation throughout the organization.

United Defense

FMC/BMY

April 4, 1995

The Honorable Jim Chapman
2417 Rayburn House Office Building
U.S. House of Representatives
Washington, DC 20515

Dear Congressman Chapman:

This letter is in response to your inquiry regarding long-term prospects for establishing partnering arrangements between United Defense LP and Red River Army Depot near Texarkana, Texas.

United Defense strongly supports the concept of public-private partnering. Indeed, we have consummated and/or embarked on similar efforts at other Defense Department facilities. Notwithstanding the ultimate outcome of the BRAC '95 process, United Defense would be willing to explore partnering options at Red River Army Depot - provided any ultimate agreement had the full support of the DoD Army leadership.

I hope this answer is a satisfactory response to your inquiry.

Sincerely,

Thomas W. Rabaut
President and Chief Executive Officer

Dear Commissioners:

On 6 April 1995, I made a presentation to three of you during your site visit to the Red River Army Depot in Texarkana, Texas. I work for the Westinghouse Electric Corporation in Baltimore, Maryland. In December of 1994, I acted as a quality evaluator at Red River, when it was named one of ten finalist within all of the federal government vying for the President's Quality Award. Not surprising, this depot was named a winner of the Quality Improvement Prototype Award by the Federal Quality Institute.

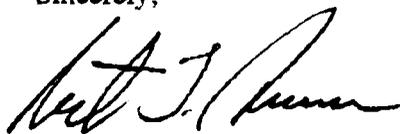

This federal-sector award is part of the President's Quality Award Program. The evaluation criteria is synonymous with that of the famous private-sector Malcolm Baldrige Award widely accepted as the definition of what constitutes world-class quality.

The fact that Red River is one of the 1995 Quality Award winners is not what is important. What is important is what they accomplished in their pursuit. The depot's extraordinary leadership was recognized by Vice President Gore in his opening speech last year at the National Quality Conference and written about in a July 1994 issue of the Government Executive. Management and Union representatives have shared their strategies and success with the National Partnership Council and many other government organizations. They were recognized as a pacesetter in the September 1994 status report of the National Performance Review for empowering their members. One of their Self-Managed Work Teams received Vice President Gore's prestigious "Hammer Award" in October of 1994. Their state-of-the-art "HEARTS" teambuilding training was praised in the July 1994 issue of the Federal Times. The people of Red River have continued to exceed their customers expectations, increase quality through member ownership, improve productivity through member empowerment and teamwork, decrease cost by improving processes, and focus their energies on helping to regain the reputation of our government and the taxpayers trust during downsizing, major reorganizations, and the threat of BRAC.

On 6 April, I heard about Red River's unique capabilities that point out its military value. Just as important as those capabilities is the summation of the depot as a team, not just each member as an individual. In December, I witnessed the mutual respect, understanding and support, between the members. The application of technology witnessed here coupled with people skills creates an unusually productive environment yielding exceptional metrics as compared to other industrial complexes.

The quality of the products provided our soldiers, performance efficiency, and the responsiveness and readiness to provide our soldiers the products they need when they need them should be a major criteria in the decision process. Red River's motto is "Our Best, Nothing Less." Their best is nothing less than superior.

Sincerely,

A handwritten signature in black ink, appearing to read "Robert T. Barnes". The signature is fluid and cursive, with a large initial "R" and "B".

Robert T. Barnes
Manager, Manufacturing Technology

19 Oct 93 Fred Smith and Al Wilson attend first AMC BRAC 95 brainstorming meeting. Concept on Minimum Sustainment Cadre (MSC) addressed.

14 Dec 93 Fred Smith and Al Wilson attend second AMC BRAC 95. MSC is discussed in detail. FONECON was held with Maureen Wiley, DA DCSOPS Base Closure Task Force, addressing MSC concept. Al Wilson offers to brief her on how the Ammo sector downsized in place via Facilities Contracting and ARMS.

16 Dec 93 Videoconference with Al Wilson, Fred Smith, AMC, Maureen Wiley and others on Facilities Contracting and ARMS. Suggested we talk to Maureen about MSC in depots.

27 Jan 94 ANAD briefs MG Benchoff on prototype MSC concept.

28 Jan 94 (Morning) Concept briefed to LTG Pigaty. He is supportive.

28 Jan 94 (Afternoon) Concept is briefed to Maureen Wiley and other team members. They are not supportive.

22 Feb 94 All five depots brief MG Benchoff on MSC concept.

24 Feb 94 Pam Gaudiose briefs Bob Keltz and staff on MSC concept. They are not supportive and we are told to keep MSC concept and numbers close hold.

13 Oct 94 Al Wilson briefs AMC Base Closure Task Group in Huntsville, AL on MSC concept. Again, no support.

NEWS RELEASE

PUBLIC AFFAIRS OFFICE
RED RIVER ARMY DEPOT
TEXARKANA, TEXAS 75507-5000
903/334-3143

February 28, 1994
FOR IMMEDIATE RELEASE

DESCOM ANNOUNCES MAINTENANCE RESTRUCTURING STUDY

The U.S. Army Depot System Command (DESCOM) has announced a study that could lead to a major restructuring of the Army's maintenance capabilities, including work done locally at Red River Army Depot.

In addition to Red River, the command currently has four other major maintenance depots -- Anniston Army Depot, AL; Corpus Christi Army Depot, TX; Letterkenny Army Depot, Chambersburg, PA; and Tobyhanna Army Depot, PA.

During the past three years, DESCOM has taken action to close other Army maintenance activities at Lexington, KY; Sacramento, CA; Tooele, UT; and Mainz, Germany, as required by Congress under the Base Realignment and Closure (BRAC) program. The command is now under pressure to close more depots as part of the BRAC process in 1995.

The DESCOM study now underway is designed to determine if it is feasible to reduce the workforce and amount of work being done at the five remaining maintenance depots, while keeping all five installations open. In effect, this proposal would eliminate the equivalent of up to two or more of the depots, but would maintain a minimum capability at each.

DESCOM officials say that keeping a minimum level of personnel and equipment at each depot is essential to retain specialty skills and be prepared for any expansion that may be necessary in the future. DESCOM and Red River officials also point out that the closure of any depot will mean losing unique skills, since each depot is built around unique centers of technical excellence.

Each of the five depots already performs a specialized mission. Anniston overhauls tanks; Corpus Christi overhauls helicopters; Letterkenny is the maintenance center for all military tactical missiles; Red River overhauls Bradley Fighting Vehicles and other light tracked armored vehicles; and Tobyhanna maintains communications and electronics equipments.

Under the guidelines of the study, each of the depots will focus on the one weapons system that requires the greatest number of skills. At Red River, that weapons system is the Bradley Fighting Vehicle.

DESCOM ANNOUNCES MAINTENANCE RESTRUCTURING STUDY

Page 2

Red River currently employs 1,278 direct-labor workers in its maintenance facilities, along with 1,146 persons who are in indirect labor and installation support jobs. Ammunition storage and missile maintenance jobs at the depot are not a part of the study.

Preliminary results from the study indicate that Red River's direct-labor work force may drop to about 720, and those in installation support to about 770. Labor costs at the depot would also be reduced from an annual rate of approximately \$90 million to \$50 million.

Under current Department of the Army strategy, Army depots support combat operations by providing specialized assistance to repair and maintain Army equipment through modifications, upgrades, technical assistance and troubleshooting.

In any situation where Army troops are sent overseas to face a hostile enemy, depot employees not only deploy routinely with the military units, but they must also support predeployment activities at many posts around the country. During Operation Desert Storm, 315 Red River members were sent to Saudi Arabia and other military bases.

To maintain the capability to support these types of operations, DESCOM officials say the depots need not perform depot-level maintenance on all Army critical weapons systems. Rather, just repairing and overhauling a percentage of the Army's vehicles and weapons will provide enough work to keep the minimum critical skill base intact.

Since retaining only those critical skills does not require retention of all current buildings and equipment, the DESCOM study will also determine if a portion of the industrial facilities at each installation can either be closed or turned over to private businesses, as is done in the BRAC process.

Also, by consolidating the remaining personnel and equipment into as few facilities as possible at each depot, fewer dollars have to be spent on overhead costs, which in turn reduces operating costs and makes the depots more efficient.

According to DESCOM officials, reducing each of the five remaining maintenance depots by approximately 40 percent is preferable to closing any of the five, since there are significant costs involved to retrain personnel, move equipment and close facilities under any closure scenario.

Commanders at the five depots are now conducting the portions of the study that pertain to their installations. Preliminary results of the study from all DESCOM installations will not be known until later this year.

It will also not be known until 1995 whether the Base Realignment and Closure Commission appointed by the President will accept the DESCOM concept as an alternative to outright depot closures.

RED RIVER ARMY DEPOT **MAINTENANCE MISSION**

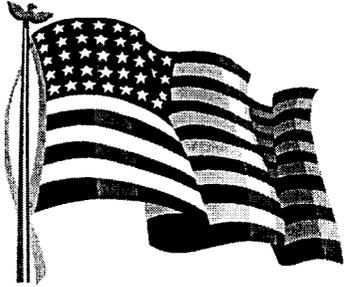

- **Vehicle Missions**
 - ▶ **Bradley Fighting Vehicle - 8 Configurations**
 - ▶ **M113 Family of Vehicles - 24 Configurations**
 - ▶ **Trailers, Trucks, Army Construction Equipment**

- **Supporting Missions**
 - ▶ **Overhaul of Major Assemblies - Engines, Transmissions, Electronic Systems**
 - ▶ **Generators, Reverse Osmosis Purification Units, Hydraulic Pumps, Valves, Actuators**
 - ▶ **On-Site Customer Assistance**
 - ▶ **Technical Data Development**

PRODUCTION FACILITIES

- **Production Facilities Cover Over 45 Acres**
- **43 Buildings Devoted to Repair, Overhaul, or Rework of Assigned Weapon Systems**
- **1.4 Million Square Feet of Production Facilities**
- **Equipment Value In Excess of \$110 Million**

TRACKED VEHICLE COMPLEX

- **218,480 Square Feet (5 Acres Under One Roof)**
- **Allows Rework/Overhaul/Repair of Assigned Vehicles in Single Facility**
- **Designed for Flexibility in Adapting to Changes in Weapon System Assignments**
- **Operations Include Painting, Cleaning, Assembly, Vehicle Hull Abrasive Cleaning, Boring/Milling, Welding, Final Milling, and Component Cleaning**

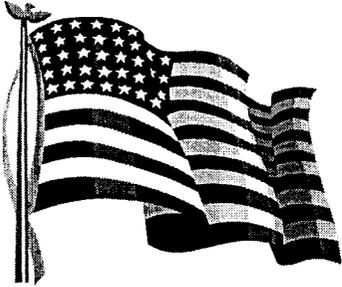

BODY REPAIR OPERATIONS

- **Supports Reconfiguration of Vehicle Bodies**
- **Light Welding of Brackets and Conversion Kit Components**
- **Supports Prototype Design and Fabrication**

VEHICLE ASSEMBLY AREA

- **Supports Vehicle Assembly Operations**
- **Flexible - Assembly Area Easily Reconfigured to Meet a Variety of Products (Vehicles) Simultaneously**
- **Lifting Capability Upgraded to Provide Increased Vehicle Throughput**
- **Work Station Instructions and Pre-Kitting of Parts Has Reduced Cycle Time From 13 to 4 Workdays**
- **Crane Capacity Capable of Supporting Light and Heavy Tracked Vehicles**

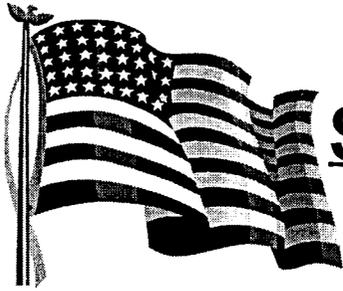

CINCINNATI GILBERT **COMPUTER NUMERICAL CONTROL** **MILLING MACHINE**

- **Milling Machine Supports Requirement for Machining Surfaces at Different Angles Without Moving the Part - i.e., Bradley Fighting Vehicle System**
- **Has 5 Axis, True 3-Dimensional Machining, Accurate Repeatability**
- **Sized to Accept Both Light and Heavy Tracked Vehicles**
- **Man-Hour Savings**
 - ▶ **Conventional Methods - 81 Man-Hours**
 - ▶ **Team Driven Gilbert - 10 Man-Hours**
- **Operational Savings in Excess of \$2 Million Per Year**

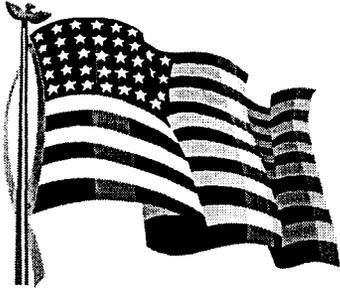

AUTOMATED HULL BLAST CLEANING SYSTEM

- Complete Removal of Paint and Nonskid Materials from Vehicle Hulls and Other Large Components
- 1/3 the Cost of Conventional Methods
- Man-Hour Savings (Vehicle Hulls)
 - ▶ Conventional Sandblast - 15.0 Man-hours/Vehicle
 - ▶ Automated Hull Blast - 4.5 Man-hours/Vehicle
- Closed System Captures Hazardous Waste for Easy Disposal
 - ▶ Generates 1/8 the Hazardous Waste of Conventional Methods

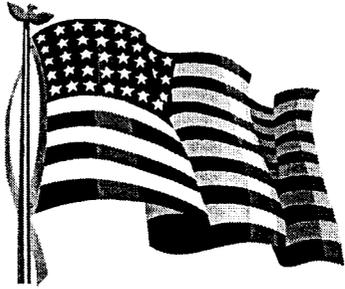

SUB-ASSEMBLY SUPPORT FACILITY **BUILDING 345**

- **371,000 Square Feet**
- **Primary Operations Include:**
 - ▶ **Repair and Overhaul of Engines, Transmissions, Hydraulic Components, and Other Hydraulic/Mechanical Components**
 - ▶ **Milling Operations**
 - ▶ **Vehicle Disassembly**
 - ▶ **Electroplating**
 - ▶ **Component Cleaning and Painting**
- **Flexible - Used to Support Current Programs and Augment Production Capability for New Programs, and/or Mobilization Requirements, i.e., BRAC 93 Tooele Tactical Wheeled Vehicle Workload**

HYDRAULIC TEST STAND FOR MULTIPLE LAUNCH ROCKET SYSTEM

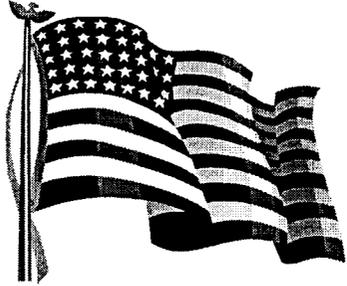

- **Hydraulic Shop Recently Modernized**
- **Accomplishes Overhaul/Repair and Testing of All Hydraulic Assemblies and Components**
- **Only DoD Depot Equipped to Test the Multiple Launch Rocket System Hydraulics**

LINES 1 - 4

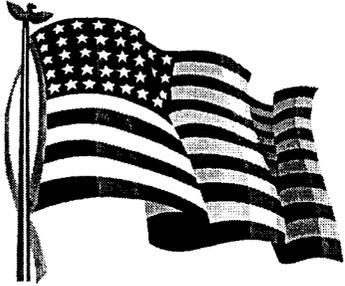

BUILDING 345

- **Additional Milling Capability for Vehicle Body Reconfiguration**
- **Area Also Supports Battle Damaged Vehicle Bodies**
- **Area Can Be Reconfigured to Meet Additional or New Requirements**

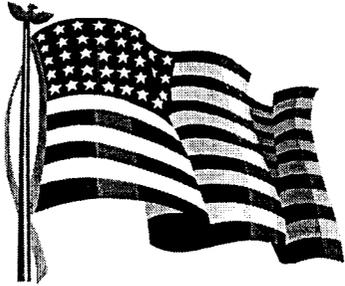

FLAME SPRAY OPERATION

- **Reconditions Shafts, Worn Bearing Surfaces, and Seal Surfaces**
- **\$1.2 Million First Year Savings**

BORE/BALL MATCHING **GAGE TEST ROOM**

- **Supports Overhaul/Test of Crossdrive Transmissions for Bradley and Multiple Launch Rocket System Vehicles**
- **Reduces Transmission Overhaul Cost by \$10,400/Unit**
- **Eliminates Need to Send Cylinder Blocks Back to Manufacturer for Repairs**

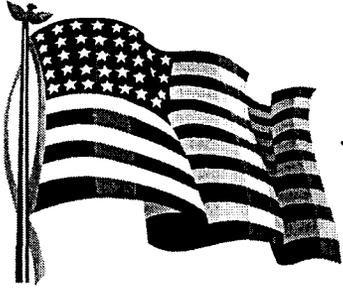

X200-4 TRANSMISSION COMPONENT TEST EQUIPMENT

- **Supports Overhaul/Test of M113A3 Transmission Components**
- **Only Maintenance Point, Public or Private, Equipped With This Capability**
- **Eliminates Army's Need for Contractor Support in the Testing of Individual Transmission Components**

ENGINE REBUILD AND RECLAMATION

- **Repair/Overhaul for Various Vehicle and Engine Electrical/Mechanical Components**
- **Engine Assembly Area for the Bradley and M113 Family of Vehicles Engines**
- **Site for New Generator Test Facility for BRAC 93 Tooele Transfer Workload (30, 60, and 100 KW Generators)**

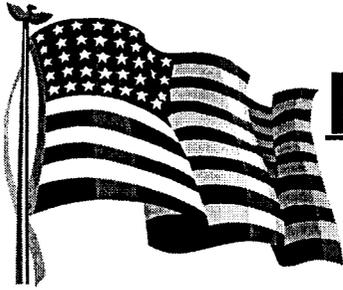

PRODUCTION LINES 16 - 18 AND 20 **BUILDING 345**

- **Augment Production Capability for New/Additional Programs**
- **Flexible in Adapting/Reconfiguring for Mobilization or Surge Requirements**
- **Currently Beginning New Program for Tactical Wheeled Vehicles (BRAC 93 - Tooele Workload Transfer)**
- **Line 20 Accomplishes Vehicle Disassembly Operations**

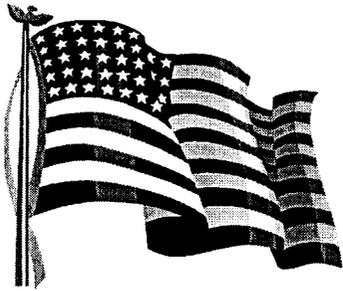

DYNAMOMETER

- **Capability to Test Engine, Transmission and Power Pack**
- **Total of 28 Test Cells**
 - ▶ **12 Fully Automated Engine Test Cells**
 - ▶ **4 Fully Automated Transmission Test Cells**
 - ▶ **6 Power Pack Test Cells**
 - ▶ **6 Transfer-Steer Differential, Power Generators**
- **Capacity Will Support Changing/Additional Requirements With No Loss in Ongoing Production**
- **Only X200-4 M113A3 Transmission Test Cell in Department of Army**

BRADLEY TRANSMISSION TEST FACILITY

- **Supports the Transmission Testing Requirements for:**
 - ▶ **Bradley Fighting Vehicle System**
 - ▶ **Multiple Launch Rocket System**
- **Self Contained Noise Attenuation Facility**
- **Generates 60% of Its Own Power**
- **Adjacent Facility Under Construction Will Provide Testing Capability for the M9 Army Construction Equipment Steering Unit (BRAC 93 - Tooele Army Depot Workload Transfer)**

VEHICLE AND ARTILLERY **OPERATIONS**

- **Whiting Bridge Crane**
 - ▶ **Bridge Crane Equipped With Two 30-Ton Hoists Providing 60 Ton Total Capacity**
 - ▶ **Crane Travels 720 ft., Spans 2 Rail Spurs and the Main Rail Line, and is 150 ft. Wide**
 - ▶ **Equipped for 24-hour Operations Capable of Loading/Unloading 300-400 Vehicles**

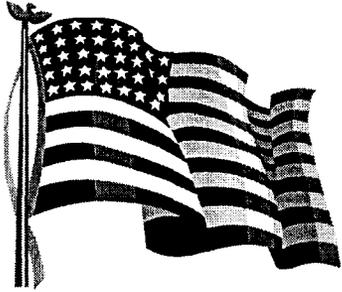

VEHICLE AND ARTILLERY OPERATIONS

- **MULTIPLE LAUNCH ROCKET SYSTEM**
 - ▶ **Mission Is Unique To DDRT Where Final Inspection Is Made For U.S. Army Missile Command**
 - ▶ **History and Overview Of The Weapon System and Its Unique Capabilities**
 - ▶ **DDRT Multiple Launch Rocket System Process**

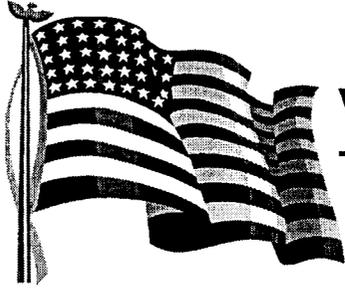

VEHICLE AND ARTILLERY OPERATIONS

- **Bradley Fighting Vehicle Returned From Using Unit**
 - ▶ **Receipt Process**
 - ▶ **Basic Issue Items, Receipt, Recovery, Process and Redistribution**

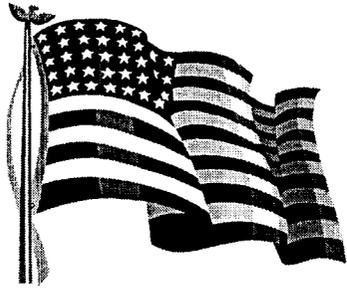

VEHICLE AND ARTILLERY OPERATIONS

- **Standard Integrated Command Post System**
 - ▶ **Basic Issue Items**
 - ▶ **The Latest Version of the Command Post Vehicle with Fielding to Units Just Beginning**

VEHICLE AND ARTILLERY OPERATIONS

- **Bradley Fighting Vehicle System Prepared for Issue**
 - ▶ **Basic Issue Items**
 - ▶ **Basic Issue Items Packaged and Packed for Shipment**

VEHICLE AND ARTILLERY **OPERATIONS**

- **Different Systems Processed**
 - ▶ **Diversified Workload Requiring Multi-skilled Personnel**
 - ▶ **7 Categories of Equipment Equalling Over 30 Different Systems**
 - ▶ **Current or Planned Maintenance Programs on the Majority of the Systems**

- **Defense Distribution Depot - Red River Major Items Workload**

- **Current and Projected Inventory**

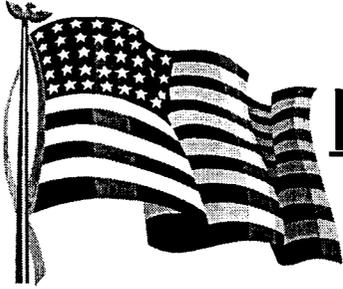

- **Certified Process Control Plan**
 - ▶ **Last 6 Months Process Assessment**

- **Summation**

TRACK SHOE ASSEMBLIES

- **Stored in Two Low Cost Warehouses**
- **Processed at DDRT for Worldwide Distribution**

DEDICATED CUSTOMER PACK AREA

- **Replaced Terminals with Radio Frequency Scanners**
- **Created Laser Card Data Transmission Device**
- **Benefits**
 - ▶ **Reduces Order Ship Time**
 - ▶ **Improves Materiel Availability**
 - ▶ **Improves Accuracy**
 - ▶ **Creates Intransit Visibility**
 - ▶ **Increases Productivity**

DIRECT DELIVERY

- **Ship to 7 Largest Customers**
- **Consistent Reliable Next Morning Delivery**
- **3-5 Day Reduction in Order Ship Time**

COST:

\$3.2 MILLION

PROJECT FEATURES:

*** NEW BUILDING**

29,300 SQUARE FEET

*** EXISTING FACILITY UPGRADES:**

FLAMMABLE STORAGE

40,000 SQUARE FEET

ACID STORAGE

6,000 SQUARE FEET

*** TOTAL HAZ CAPACITY**

75,300 SQUARE FEET

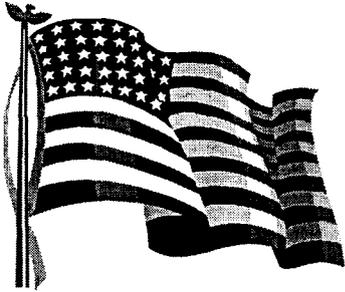

*** NEW BLDG & UPGRADES IN
COMPLIANCE WITH OSHA/EPA**

ESTIMATED COMPLETION DATE:

SEPTEMBER 1995

STATUS:

60% COMPLETE

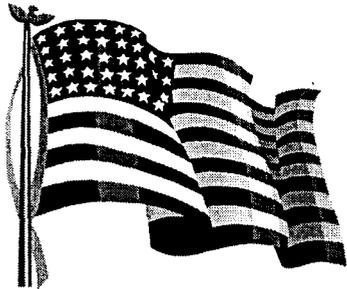

RUBBER PRODUCTS **FACILITY**

- **Army's Only CONUS Roadwheel and Track Rebuild Facility**
- **Operations Include:**
 - ▶ **Disassembly/Assembly**
 - ▶ **Remanufacturing**
 - ▶ **Painting**
 - ▶ **Cleaning**
- **Incorporates New Technologies**
 - ▶ **Fluidized Bed for Rubber Denuding**
 - ▶ **Injection Molding for Significant Production Process Improvements**
- **Process Has Saved Over \$96 Million**

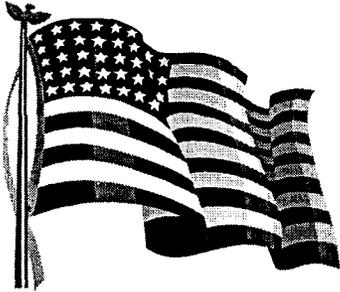

LAND COMBAT SYSTEMS **OVERHAUL FACILITY**

- **24,000 Square Feet With Overhead Crane Support**
- **Provides Final Operational Testing of Multiple Launch Rocket System**
- **Provides Build-up, Test and Mating of Turret to Bradley Vehicle Body for the A2 Conversion Program**
- **Bradley Turret Alignment Tower**
 - ▶ **One-of-a-Kind, Isolated Foundation**
 - ▶ **Checks Plumb Travel of Integrated Sight Unit**

BRADLEY FLOAT FACILITY

- **Provides Capability to Accomplish:**
 - ▶ **Float Test of Bradley Fighting Vehicle System**
 - ▶ **Check of Bradley Vehicle Hull for Leaks**
- **Adjacent Facility Provides Same Capability for M113 Armored Personnel Carrier Family of Vehicles**

SHEET METAL/WELDING **FACILITY**

- **State-of-the-Art Sheet Metal Working Facility**

- **Contains Specialized Equipment**
 - ▶ **Computer Numerical Control Precision Plate Saw**
 - ▶ **Computer Numerical Control Plasma-Arc Cut/Punch Machine**
 - ▶ **Computer Numerical Control Lathe**
 - ▶ **Computer Numerical Control Milling Machines**
 - ▶ **Laser**

- **Provides Capability for Prototypes**
 - ▶ **Light Armored Vehicle**
 - ▶ **Opposing Forces Surrogate Vehicle**
 - ▶ **M113 Stretch**
 - ▶ **Air Force - Explosive Ordnance Disposal Vehicle**

AIR DEFENSE AND LAND COMBAT SYSTEMS REPAIR FACILITY

- Provides for the Repair/Overhaul of:
 - ▶ Missile Guidance Systems
 - ▶ Launcher Systems
 - ▶ Circuit Boards
 - ▶ Radar and Fire Control Systems
 - ▶ Aircraft Armament Subsystems (COBRA and Apache Helicopters)

- Live Fire Testing of 20mm Cannon

VEHICLE TEST TRACK AND FACILITIES

- **Recently Modernized 1.0 Mile Oval**
- **Banked Turns for Speed**
- **Retainer Walls on Turns for Safety**
- **Track Widened for Multiple Vehicle Testing**
- **Four Bay Facility - For Final Inspection Before Shipment**
- **Supports Defense Logistics Agency**

Phillip DuVall

Biography

Dr. DuVall has held numerous senior level management and industrial engineering positions in his 31 years of government service. He is presently the Director of Ammunition Operations at Red River Army Depot. He directs the logistics and maintenance of ammunition and missile stocks valued in excess of \$6 billion. He has been a leader in quality management initiatives. His prior position was Deputy Director of Resources Management, where one of his duties was serving as the first depot Total Quality Management Coordinator.

Dr. DuVall received his Bachelor of Science in Industrial Engineering from the University of Arkansas in 1961. In 1973, he received his Master of Business Administration from East Texas State University. He earned his Doctor of Philosophy in 1980 from East Texas State University.

He has been very active in community and church programs. He was the co-founder and chairman of the Texarkana Clean Community Commission, chairman of the Voluntary Services Bureau, city councilman, planning and zoning commissioner, board member of the Ark-Tex Council of Governments, member of the city Electrical Examining Board, youth baseball coach, board member of the Boy Scouts, and board member and finance chairman at his church. He is a member of the Industry Advisory Board of the Material Handling Research Center affiliated with the Georgia Institute of Technology, University of Arkansas, and the University of Cincinnati. He also serves as President-elect on the board of the Arkansas Academy of Industrial Engineers.

His teaching experience includes five years as a Professor of Engineering in the Army Material Command Intern Training Center and 18 years as an Adjunct Professor at the East Texas State University at Texarkana, where he is still teaching after hours courses.

Dr. DuVall is married to Suzanne DuVall. They have two children and four grandchildren.

Congressman Jim Chapman

Congress of the United States

House of Representatives

1st Congressional District - East Texas

United States House of Representatives

In 1985, Jim Chapman began serving the people of the First Congressional District as their congressman. He won an eight-candidate special election to the U. S. House in one of the most hotly contested and visible races in the history of the Congress. Chapman has been reelected five times. Twice he was reelected despite being a top target of the National Republican Congressional Committee, winning both elections with more than 61 percent of the vote.

Congressman Chapman currently serves on the powerful House Appropriations Committee which controls all expenditures of funds by the U. S. government. In the Appropriations Committee, he serves on the Subcommittee on Energy and Water development and the Subcommittee on VA/HUD and Independent Agencies (which has jurisdiction over NASA, EPA, and the Federal Home Loan Bank Board).

Until his appointment to the exclusive House Appropriations Committee (which requires its members to give up all other standing committees), Chapman served on the Public Works and Transportation Committee and the Science, Space and Technology Committee. Chapman also served on the prestigious Democratic Steering and Policy Committee, the House leadership committee that makes assignments for Members of Congress and sets the legislative agenda.

In the East Texas tradition, Congressman Chapman has effectively worked for economic development and jobs, comprehensive trade policies, energy independence, sensible agriculture policies, and quality care for our senior citizens. he has been an outspoken advocate for a balance federal budget, for which he received the prestigious Watchdog of the Treasury Award. Chapman also works for a strong national defense and was recently honored for the fourth time with the National Security Leadership Award.

Texas Public Service

Prior to his congressional service, Jim Chapman served as District Attorney in Texas' 8th Judicial District. he was elected District Attorney in 1976, reelected in 1980 and served until `1985. As District Attorney, Jim Chapman achieved a 99 percent conviction record and a national reputation as a tough, anti-crime prosecutor.

Chapman has held leadership positions in the Hopkins County Bar Association and the State Bar of Texas. He also served as a director of the Texas District and Country Attorneys Association, as well as the National District Attorneys Association.

Personal Background

Born on March 8, 1945, Congressman Chapman was raised and educated in Sulphur Springs. he graduated from Sulphur Springs High School in 1963, received his BBA degree in accounting from the University of Texas at Austin in 1968, and his law degree from Southern Methodist University.

Jim Chapman is married to the former Betty Brice of Sulphur Springs. They have two children, Jennifer, a 21 year old senior at the University of Texas, Austin, and Trey, an 18 year old freshman at UT. The family belongs to the First United Methodist Church in Sulphur Springs, where Chapman has served as church lay leader and chairman of the Official Board.

Brigadier General Claude B. Donovan, USA (Ret.)

Biography

General Donovan retired from the U.S. Army in 1987 after 29 years of service. During his military service, he was program manager for some of the Army's most critical weapons programs, commanded logistics units at all levels from platoon to depot and served as an instructor of weapons system engineering at the U.S. Military Academy.

General Donovan's assignment immediately prior to retirement was Deputy Chief of Staff for Development, Engineering and Acquisition at the Army Materiel Command Headquarters.

From 1983-1986 he was the Program Manager for the Bradley Fighting Vehicle System where he was responsible for all aspects of cost, schedule and performance on a multi-billion dollar program. Development and testing of politically sensitive product improvements were successfully completed. Contracts covering five major components of the system were coordinated to provide an uninterrupted supply of Government Furnished Material to the prime contractor. All systems were delivered on time and within budget.

As Program Manager for Light Combat Vehicles, he continued his responsibilities with the Bradley vehicle and 25mm Bushmaster gun and acquired executive management functions for the M113 family of vehicles, the M9 Armored Combat Earthmover, and the field Artillery Ammunition Supply Vehicle. To these important programs he provided the benefit of his extensive experience in engineering, production, quality assurance, ILS, testing, fielding, and program control.

While Project Manager for the M60 tank program from 1981-1983 he directed a major product improvement program, introduced statistical process control to tank production and oversaw \$200 million in foreign military sales cases, while maintaining production and world wide fielding schedules.

As commander of Red River Army Depot, he directed mission accomplishment as well as industrial modernization and expansion of maintenance and supply activities. The depot modernized and upgraded virtually all U.S. Army M113 Armored Personnel Carriers (APC). Experience as a divisional maintenance battalion commander was invaluable in providing effective direct support, general support, and depot maintenance of combat equipment.

During the Vietnam Conflict, he served as the Materiel Officer for the Division Maintenance Battalion in the First Infantry Division.

Following his retirement he has provided consultant services on proposals for major system contracts and on marketing strategies.

He is currently mayor of Ouray, Colorado, and active in numerous volunteer and public service activities.

Education: B.S. - United States Military academy
MS in ME - University of Alabama
ORSA - Royal Military College of Science (UK)
Industrial Management - Industrial College of the Armed Forces

Robert T. Barnes

Biography

Mr. Barnes is currently employed with Westinghouse Electric Corporation as Business Operations Manager for Systems Development and Operations Division, Electronic Systems. He is responsible for business process reengineering, and new product transition, to various manufacturing locations having leading-edge process technology.

Mr. Barnes earned a Bachelor of Science degree in Mechanical Engineering from Virginia Polytechnic Institute in 1963. He also studied in the Executive Program at the University of Virginia's Graduate School of Business Administration.

During his 23 years at Westinghouse, Mr. Barnes has held a number of positions in manufacturing and in management. He has worked as a manufacturing engineer, supervisor and manager. In 1983, he was named manager of the Manufacturing Systems and Technology Center in Columbia, MD., where he was responsible for manufacturing engineering and the manufacturing research and development programs focusing on productivity improvement through automation and robotics.

Under Mr. Barnes' leadership, the Electronic Assembly Plant won the 1987 Electronics Factory Automation Award, and the Manufacturing Operations Division won the 1990 George Westinghouse Total Quality Award.

Mr. Barnes has served on the board of directors of Xetron Corporation, the Maryland Center for Total Quality and Productivity, Lions Club International, and the Foundation of Manufacturing Excellence for the state of Maryland. He is a member of the American Society of Mechanical Engineers. He also serves on the board of directors of Westinghouse-Norden Systems and Junior Achievement of Central Maryland.

Mr. Barnes was born on Oct 30, 1939. He is married and makes his home in Columbia, MD.

ROBERT E. "SWEDE" LEE

Biography

PERSONAL INFORMATION:

Birthplace: Texarkana, Arkansas

Education: Texarkana, Texas High School - 1954

BS Degree, University of Texas at Austin - 1958

PROFESSIONAL HISTORY:

1958 - 1977 Football Coach and Athletic Director

1977 - 1980 Private Business

1980 - Present President, Texarkana Chamber of Commerce.

Senator Kay Bailey Hutchison

United States Senate

Senator Kay Bailey Hutchison, Republican of Texas, is the first woman to represent her state in the U.S. Senate. In June of 1993, she was elected by the largest margin of votes ever received in the United States against a sitting, incumbent senator. In November, 1994, she was re-elected to a full, six-year term in the Senate.

Senator Hutchison grew up in La Marque, Texas, and attended college and law school at the University of Texas. After receiving her law degree, she worked as a reporter for KPRC-TV in Houston. She then moved to Washington to serve as press secretary to fellow Texan Anne Armstrong, Co-chairman of the Republican National Committee.

Senator Hutchison returned to Houston and was twice elected to the Texas House of Representatives. In 1976, President Gerald Ford appointed her Vice Chairman of the National Transportation Safety Board.

In 1978, she moved to Dallas and was appointed senior vice president and general counsel of Republic Bank Corp. She later co-founded Fidelity National Bank of Dallas and owned McCraw Candies, a manufacturing company with national distribution. In addition, she was a partner in Boyd-Levinson, Ltd, in the Dallas and Houston design centers.

In 1990, she was elected Texas State Treasurer, where she cut her agency's budget more than any other state official while increasing returns on Texas investments to a historic \$1 billion annually. She led the fight against a state income tax and proposed limiting state debt, which the Legislature did.

Her major legislative initiatives have been aimed at restoring the proper focus of the federal government and limiting its intrusion into the domain of states, local governments, small businesses and individuals.

On the Armed Services Committee, Senator Hutchison has proven a strong advocate for United States military personnel and their families, and for increased readiness and support for our armed forces. After 18 months on Armed Services, she became the first woman to serve on the Senate Select Committee on Intelligence.

In her work on two other Senate committees, Small Business, along with Commerce, Science, and Transportation, she has consistently voted to roll back federal mandates and to limit the power of government.

Senator Hutchison was named a Deputy Majority Whip and is co-chair of the Senate GOP Regulatory Reform Task Force.

Senator Hutchison lives in Dallas with her husband, Ray, a former colleague from the Texas House. He is a partner in the law firm of Vinson and Elkins. Among other charitable activities, the Hutchisons fund two scholarships at the University of Texas and one at Southern Methodist University School of Law.

The Senator's links to Texas are historic. Thomas Jefferson Rusk, of Nacogdoches, was the first Texan to serve in the U.S. Senate. His friend and law partner was Charles S. Taylor, who signed the Texas Declaration of Independence. Taylor's great-great-great-great granddaughter, Kay Bailey Hutchison, today occupies the Rusk seat in the U.S. Senate.

DDRT SUPPORT TO ARMY RESERVES

The Red River Defense Complex trains 40% of all Army Reserve and National Guard units trained in the U.S.

Transportation units routinely haul materiel for DDRT as part of their training saving many dollars which would otherwise be paid to Commercial Carriers.

Supply units assist in the Preservation and Packaging areas assembling tool kits, etc.

MITLA

Micro Circuit Technology for Logistics Applications

Utilizes Radio Frequency (RF) and Logistics Marking and Reading System (LOGMARS) technologies to improve efficiency in shipment processing.

DLA TENETS

DLA's analysis of Collocated distribution depots:

"When a Military Service determined that a Maintenance Depot was surplus to their needs, DLA would consider closing collocated distribution functions. The Distribution Concept of Operations states that DLA's distribution system will support the size and configuration of the Defense Depot Maintenance System. Thus, if depot maintenance activities are disestablished, Collocated Depots will also be disestablished. The recommendation to disestablish DDRT was driven by the Army recommendation to realign Red River Army Depot. The realignment of DDRT's primary customer and the Agency's need to reduce infrastructure drove this recommendation. DDRT was ranked 5 of 17 in the Collocated Depot Military Value matrix. However, that Military Value ranking was based on support to the maintenance missions. With the realignment of the maintenance mission to Anniston, Alabama, that value decreases significantly. Other customers within the DDRT area can be supported from nearby distribution depots. Production and physical space requirements can also be met by fully utilizing other depots in the distribution system."

LOGIC:

- Maintenance Depot BY FAR the Biggest Customer
- Complete Closure of Facility Infrastructure Generates Best Economic Return
- Collocated Depots Provide Normal Distribution to Regional Customers and Limited World-wide Support.
- Physical Space Requirements Can be Met by Using Remaining Depots

FACT:

- Maintenance Only Represents 12% of DDRT Workload
- Infrastructure Will remain to Support Remaining Activities
- DDRT has Capabilities to Respond to World-Wide Customers as Well as Regional (and did respond during Desert Storm)
- With the BRAC 95 Recommendations and Other Major Initiatives Affecting Physical Space Requirements, DLA Will Realize a SHORTFALL of 21M Cubic Feet of Storage Capacity.

• RESERVE COMPONENT

- According to DOD Directive 1225.7, a Reserve Component Recruiting Demographic Study was to be conducted and an analysis performed on the impact resulting from specific closures and realignments.
- No evidence of any analysis done on the impacts on Reserve Component Training as a result of closing Red River Complex.
- TABS did not address the **National Guard Armory** located at RRAD!
- RRAD offers reserve training for a broad range of MOS's because of the unique Military Complex located here.
- RRAD trains **40%** of all Army Reserves and National Guard trained at depots.
- Approximately 35,000 man days of training are planned for FY 96.

EXCESS CAP-MAINT	164,600	149,770
	-----	-----
USED FOR CURRENT OPERATIONS	3,035,846	3,201,038

DLA WILL BE LEFT WITH SERIOUS STORAGE CAPACITY SHORTFALL

- After completion of BRAC 95, DLA will have a 21 million ACF shortfall of storage capacity.
- DDRT will have 10,394,921 ACF of excess storage capacity with the completion of the Distribution Operations Center.

STORAGE CAPACITY INCONSISTENCY

In Major General Lawrence P. Farrell's briefing to the BRAC Commission, he stated, "Since the Agency did not need the storage capacity, the Agency recommended the closure of the DLA Distribution Depots at Letterkenny and Red River."

Figure 8.6 of the DLA BRAC 95 Detailed Analysis identifies a shortfall of 21M.

Minutes dated 13 Jan 95, 19 Jan 95, 24 Jan 95 am, 24 Jan 95 pm, and 2 Feb 95 addressed storage capacity shortfall.

DLA BRAC 95 Detailed Analysis

Capacity analysis conclusion

DLA's current and projected production capacity to process receipts and issues in the DLA Distribution System far exceeds current and projected requirements and can easily be met with any closure scenario considered by DLA. For example, incorporating projected workload reductions through year 2001 and our BRAC 95 recommendations, we will require only 28.2 percent of our bin throughput capacity; 77.9 percent of our covered bulk throughput capacity; and 54.0 percent of our open bulk throughput capacity.

Our current and projected physical storage space capacity also far exceeds our current and projected storage space requirements. While the need to store is the more limiting of the foregoing capacities, this known surplus is the rationale for disestablishing/closing existing distribution depots. A recent GAO audit report confirms the existence of Government storage capacity far in excess of requirements. The FY 95 BRAC recommendations will eliminate 114M ACF of storage space resulting in a potential shortfall of approximately 21M ACF. However, on-going and planned initiatives are projected which, when fully implemented, will potentially result in excess capacity by the year 2001. For example, Prime Vendor extended to a greater range of commodities; Direct Vendor Delivery extended to every feasible commodity class; Third Party Logistics which trades off DoD storage space for commercial distribution; discrete pricing which begins to charge Service customers for storage space; and a range of other innovative agreements with suppliers and customers. The point is, DLA is shifting to commercial methods which, in some companies, have virtually eliminated inventories and warehouses. In the future, we will attempt to store only war readiness/contingency material and those items which directly support maintenance. All of these factors were considered in projecting our future storage space requirements and were paramount in making our 95 BRAC recommendations.

To posture ourselves to respond to anticipated inventory drawdowns, DLA is recommending maximum installation closures. To enable this to occur, we have established Joint Cross-Service arrangements with the Navy and the Air Force to obtain additional storage space to bridge the 21M ACF potential deficit on those Navy and Air Force installations where we already have a DLA storage and distribution presence in support of an active maintenance depot. The Navy has offered additional storage at Norfolk and the Air Force has offered additional storage at the Air Logistics Centers. It is in the best interest of DLA and DoD to take advantage of these offers and to fully utilize these installations. This gives DLA a prudent hedge at existing maintenance locations in lieu of keeping open an additional installation. Additionally, this action will allow us to eliminate excess warehouse space in a timely and organized fashion as our future storage requirements are reduced.

DLA BRAC 95 Detailed Analysis

These initiatives coupled with previous BRAC actions are reflected in the SMP and will result in a 525M ACF against a storage requirement of 461M OCF. However, during the BRAC Executive Working Group deliberations, other additions and reductions were calculated commensurate with the BRAC 95 recommendations and are reflected in the two figures below.

BOTTOM LINE: SHORTFALL OF 21M		

DLA STORAGE CAPACITY SHORTFALL

13 Jan 95 (BRACEG): Build four warehouses (2 @ DDSP & 2 @ DDJC)

Add 10M ACF

Convert DDCO operational area @ 5M ACF (\$1M)

Possibly use Rough & Ready Island in lieu of new construction

High Backlog of Maintenance & Repair (BMAR)

Navy possibly to close Rough & Ready Island

19 Jan 95 (BRACEG): Discuss deleting MILCON for four warehouses

- ~~Risk to achieving capacity goals in 2001-magnified if not built~~

Proposal to Director will include 20M ACF shortfall

Suggested 10M ACF be accommodated by four warehouses @\$48M

plus \$4M for equipment obtained from closure sites

Payback would be in less than 2 years

Combination of alternatives to be used for additional 10M ACF

Concern expressed for approval of additional MILCON

24 Jan 95 AM (BRACEG): 5M ACF gained by racking out DDCO opns area

12M ACF by using Rough & Ready Island

12M ACF by maximizing cube at remaining sites

20M ACF original shortfall now projected at 8M ACF (Math???)

Risks and impacts stressed

NOTE: This meeting was prior to DDRT & DDLP being on the list

24 Jan 95 PM (BRACEG): Reviewed storage capacities with realign of DDMT, DDRT & DDLP.

Shortfalls

DDMT - 1M ACF

DDLp - 8M ACF

DDRT - 9M ACF

2 Feb 95 (BRACEG): Air Force might provide addl bldgs at collocated sites

27 FEB 1995

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group
(BRACEG) Meeting - 13 January 1995

E. A recent DoDIG audit of the SAILS model identified some data errors in model processing. The errors were corrected and new model summary output was provided to the BRACEG. Relative cost savings of the various options remained the same in this new output. Also, at the recommendation of the Deputy Executive Director for Distribution, modifications to the model input were made to realign a second stand-alone depot. The SAILS model treats realigning depots as if they are closed. The result of this modification was that the SAILS model charged a high penalty because it still wanted to process material to the East Coast locations, in lieu of paying the high transportation costs incurred when shipping materiel to the west.

F. The results of several new COBRA scenarios were displayed in the "close two ICP" options as a result of realigning an additional stand-alone depot.

1. Option 1-1 realigns the Defense Distribution Depot Richmond (DDRV); the Net Present Value (NPV) savings are generally attributed to saving people.

2. Option 2a-1 realigns the Defense Distribution Depot Memphis (DDMT). Again the NPV savings are generally attributed to saving people. Savings are not as great as a closure because 236 people had to remain at the depot to run the installation and provide support to tenants.

3. Option 2b-1 realigns the Defense Distribution Depot Ogden (DDOU). Since 210 people remain at DDOU to run the installation and support tenants, savings are not as significant as in the closure options.

4. In summary, the processing of these additional scenarios support closing two stand-alone depots and realigning only one. Higher transportation costs, along with costs for holding open the base in the DDMT and DDOU options, outweigh what you gain in labor savings. Similar logic applies to the additional realignment scenarios for the "one ICP options."

G. Storage capacity shortfall alternatives were reviewed again. The Chairman was concerned about building four warehouses (two at the Defense Distribution Depot Susquehanna (DDSP) and two at the Defense Distribution Depot San Joaquin (DDJC)) that would add 10 million attainable cubic feet. Besides converting the Defense Distribution Depot Columbus (DDCO) operational areas for an additional 5 million Attainable Cubic Feet (ACF) (at an estimated cost of \$1M), the Chairman suggested using the storage capacity at Rough and Ready Island (12M ACF) in lieu of requesting new

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group (BRACEG) Meeting - 13 January 1995

warehouse construction. BRAC Working Group Members indicated that using Rough and Ready Island could be costly due to high Backlog of Maintenance and Repair (BMAR) costs if we retain the space indefinitely. Also, the Navy may close Rough and Ready Island.

H. The revision of the analysis reviewed at the 9 January 1995 BRACEG meeting, using the BMAR and real property maintenance costs was displayed. This analysis applies to DoD final selection criteria 2 and 4. (The availability and condition of land, facilities, and associated air space at both the existing and potential receiving locations, and the costs and manpower implications.) This revised analysis resulted in very little change from the earlier version. The realignment of the additional stand-alone depot options, discussed in paragraph 11F above, were also included in this updated analysis.

I. A detailed discussion of recommendations to be made to the Director, DLA, by the BRACEG took place.

1. When analyzing the stand-alone depots, installation Military Value data indicates the most proper closures would be DDOU and DDMT. Although the COBRA results are not as favorable for these two depots, the SAILS analysis consistently suggests the closure of DDOU and DDMT result in lowest operating costs. Also, there is a significant amount of synergy between the Defense Distribution Depot Norfolk (DDNV) and DDRV, that would be lost if DDRV was closed. The increasing importance of the Norfolk location to the Navy and the significant assistance DDRV can and does provide needs to be continued, particularly in light of the fact that DLA is losing storage space at the wharf and in the South Annex at DDNV. Closure of either DDRV or DDCO will not result in a base closure since both are tenants on DLA ICP installations.

2. For the one ICP option, the consensus was to close the Defense Industrial Supply Center (DISC) (Option 3A). This recommendation was based on the collective military judgment of the BRAC Executive Group after reviewing the results of the Capacity, Military Value, and COBRA results. Differences in the results of these analyses were not great enough by themselves to indicate which option was best. Therefore, military judgment, which took into account all of the available data relating to ICP analyses, as well as depot recommendations was the final determinant. The weapon systems items will be realigned to the Defense General Supply Center (DGSC) and the Defense Construction Supply Center (DCSC). The DISC, DCSC, and DGSC troop and general support items will be realigned to the Defense Personnel Support Center (DPSC). This alternative would result in a difference of less than 400 jobs in Philadelphia. COBRA projects less savings for the one ICP option than the two ICP options.

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group
(BRACEG) Meeting - 19 January 1995

C. The issue of potential storage capacity shortfall, which was discussed at the 13 January 1995 BRACEG, was reviewed, as was the impact of deletion of the Military Construction (MILCON) for the four new warehouses (two at New Cumberland and two at Sharpe) on the Cost of Base Realignment Action (COBRA) results. Although all agreed with the need to reduce infrastructure, the risks to achieving our capacity goals in 2001 would be magnified if the four new warehouses were not built. The Chairman felt the risks were ameliorated somewhat by ongoing initiatives (such as third party logistics) that could result in capacity requirements being less than projected for 2001. The distribution portion of the recommendations the BRACEG will propose to the Director includes a 20 million Attainable Cubic Feet (ACF) capacity shortfall. It was suggested that half of the shortfall (10 million ACF) could be accommodated with the construction of four warehouses costing \$48 million and acquiring racking material and equipment from planned closure sites at a cost of \$4 million. This would result in an easily justified pay-back of less than 2 years. A combination of alternatives would be used to accommodate the remaining 10 million ACF shortfall (see tasking at paragraph IIID below). Since new MILCON requirements are likely to be of concern to the BRAC Commission, even though it can be supported based on our recommended closures, it was agreed to pursue this discussion further at the next meeting with the Director.

D. An update from the 18 January 1995 Joint Cross Service Depot Maintenance Group meeting indicated that none of the Services had yet submitted their BRAC 95 recommendations to the Secretary of Defense (OSD); however, the Chairman of the Joint Depot Maintenance Group is apparently satisfied that the Services were considering the Joint Group effort in their recommendation development.

E. The Navy has indicated that they will not shut down their maintenance operations at Jacksonville. Therefore, the realignment of the Defense Distribution Depot Jacksonville (DDJF) will not be required.

F. The Principal Deputy Director has discussed with the Special Assistant for BRAC, Headquarters U.S. Air Force, the possibility of moving the Defense Contract Management District West to Los Angeles Air Force Station. He is awaiting a response.

III. FOLLOW-UP ACTIONS:

A. In the rationale to support our recommendations, we need to consider the DoD selection criteria and reflect how our recommendations relate to the criteria--
CAAJ(BRAC).

keep open a stand-alone depot we were proposing to close. Since this decision was obtained a short time before the meeting, MMD will review associated issues and bring a recommendation to a BRACEG meeting to be scheduled later in the day.

D. Additional efforts to accommodate a storage capacity shortfall were briefed. Besides achieving an additional 5 million Attainable Cubic Feet (ACF) by racking out the operations area at the Defense Distribution Depot Columbus (DDCO) and using the 12 million ACF available at Rough and Ready Island, an additional 12 million ACF of storage capacity will be achieved by maximizing cube at the remaining depots. As a result the projected shortfall of 20 million ACF previously briefed is now estimated to be an 8 million ACF shortfall. The risks outlining the Storage Management Plan and possible impacts were again stressed.

*This date
was before
DDRT & DDC
were marked
for closure*

E. The methodology used to determine distribution direct and non-direct labor requirements for the distribution workload in Fiscal Year 2001, considering potential BRAC realignments and closures, was reviewed. The parameters used in making this determination were noted. Goals were to increase productivity by 25 percent and decrease indirect costs by 25 percent. To achieve this reduction, 40 percent of the direct labor and 65 percent of the non-direct labor positions will be eliminated from those depots affected by closure or realignment. Although an exact requirement was determined for the number of direct labor personnel needed to perform the distribution workload in Fiscal Year 2001, a degree of risk was assumed by assigning a savings percentage to all affected depots, regardless of the number of sites affected by closure or realignment.

F. An ongoing issue amongst the Services and DLA is determining who will pay for the closure of tenants (such as our collocated distribution depots) and who will claim savings. If the Service is required to pay for the closure (as they did in BRAC 93) then some Services feel that they should claim the savings. In either case, the Services will pay for the cost of collocated depot closures because our unit cost will have to rise to accommodate this cost, if DLA pays for the closure. We hope to receive some OSD guidance soon.

IV. FOLLOW-UP ACTIONS:

A. Modify the DoDIG chart to show the percent of errors and the amount corrected--DoDIG.

B. Review alternatives associated with the Army closing Letterkenny and present recommendations at the next BRACEG meeting--MMD.

CAAJ(BRAC)

3 MAR 1995

MEMORANDUM OF MEETING

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group (BRACEG) Meeting - 24 January 1995 (Afternoon Session)

I. PURPOSE: To discuss DLA's distribution depot alternatives associated with the possible closure of Letterkenny. A list of attendees is at enclosure 1.

II. BRIEF SUMMARY OF DISCUSSION:

A. In a discussion between the DLA BRAC Team Chief and her Army BRAC Office counterpart subsequent to the morning BRACEG meeting, we were advised that a final Army decision on Letterkenny would not be made until 26 January 1995. He indicated that if Letterkenny closes, they would expect us to vacate the post. Their one-page submissions to the Office of the Secretary of Defense (OSD) are now expected to be provided on 27 January 1995.

B. A review of the Net Present Value (NPV) and Steady State (SS) savings for the realignment and closure of the Defense Distribution Depot Memphis (DDMT), Defense Distribution Depot Red River (DDRT), and Defense Distribution Depot Letterkenny (DDL) were shown (enclosure 2). The NPV and SS savings favors realignment of DDRT, while a closure of DDMT saves the most. The Strategic Analysis Integrated Logistics System (SAILS) model is being run with these alternatives; when finalized the results will be reviewed with the Principal Deputy Director.

C. Storage capacity charts, that reflected a realignment of DDMT, DDL, and DDRT, were reviewed (enclosure 3). The storage capacity shortfall would be 1 million Attainable Cubic Feet (ACF) if DDMT were realigned; while the shortfall, if DDL were realigned, would be 8 million ACF and 9 million ACF if DDRT were realigned.

D. We will schedule another BRACEG meeting as soon as the Services make their final decisions.

III. FOLLOW-UP ACTIONS:

A. Review new SAILS model results (paragraph IIB, above) with the Principal Deputy Director—CAAJ(BRAC).

27 FEB 1995

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group
(BRACEG) Meeting - 2 February 1995

should explore whether there are available sites in the Los Angeles area that may be considered for purchase to accommodate the larger DCMD West Headquarters contingent.

E. Revisions to the close "two ICP" and "one ICP" options were reviewed. The revision includes closing vice realigning the Defense Distribution Depot Letterkenny (DDLDP) and keeping open the Defense Distribution Depot San Antonio (DDST). The Air Force has indicated that they might be able to provide us additional buildings for storage at our collocated depots in San Antonio, Warner Robins, Hill and McClellan. This could alleviate some or all of the storage capacity shortfalls we have identified in our various options.

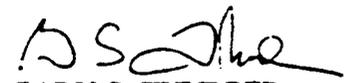

III. DECISIONS REACHED: Assess the real estate market in Los Angeles for potential purchase of buildings near the current El Segundo location for relocation of DCMD West Headquarters.

IV. FOLLOW-UP ACTION:

- A. Assess the Los Angeles real estate market--MMDI.
- B. Rerun COBRA model if necessary after more information is received concerning DCMD West relocation--CAAJ(BRAC).

DDRT -- COLLOCATED, BUT UNIQUE

- **88% of Workload Supports Off-Depot Customers**
- **Ranked 5th Out of 17 DLA Collocated Depots**
- **Normal Distribution Functions for World-Wide Customers**
- **Assessed 16 Out of 100 Points for Military Value**

DDRT's Military Value Not Determined From Points

Assessed for Support to Collocated Maintenance Activity

READINESS AND COSTS

- **41% Military Population and Installations located in central U.S.**

DDRT has 84% delivery rate within two days

DDRT has low freight rates

DDRT has an excellent transportation network (during ODS, when pipeline became congested, high priority requirements were expedited to combat areas)

- **Surge Capability**

~~Proven Issue/Receipt Workload surge capability~~

Workforce availability/Support equipment availability

Utility expansion capabilities

3,264 buildable acres available for expansion

THE TEN DIVISION FORCE

- Two heavy divisions of two brigades each based in Germany with a brigade of each division based at Ft. Riley
- An airborne division based at Ft. Bragg
- An air assault division based at Ft. Campbell, Ky.
- A heavy division based at Ft. Stewart, Ga., with one of its brigades based at Ft. Benning, Ga.
- Two heavy divisions based at Ft. Hood with a brigade of one division based at Ft. Carson
- A light division based at Ft. Drum with one of its brigades based at Ft. Richardson
- A heavy division based in South Korea with one of its brigades based at Ft. Lewis
- A light division based in Hawaii with one of its brigades based at Ft. Lewis

SINGARS

- DDRT is the single world-wide source
- DDRT has the expertise to fabricate, maintain, and ship faster, better, and cheaper
Recently outbid Tobyhanna Army Depot for a savings of over \$28K
- SINGARS encompasses the issue/installation of the latest military communications equipment to the entire Army

DDRT is vital for the continued success of fielding efforts.

Present fielding efforts are anticipated to extend until May 2000

Relocating fielding assets would cripple fielding efforts and jeopardize troop readiness

- DDRT supported troop readiness by issuing SINGARS in Desert Storm arena, Haiti, Somalia, and Kuwait
- Reimbursable funds provided for all assembly actions

DISTRIBUTION SUPPORT TO RUBBER PRODUCTS AND AMMUNITION

- DDRT has 100,000 ACF of chilled storage capacity in support of Rubber Products.
DDAA has 0 ACF of chilled storage capacity.
- DRMD 902 directs all distribution functions to be performed by DLA.
- Distribution support to Rubber Products and Ammunition has not been addressed in the BRAC closure analysis.
- Transfer of a government owned/government operated activity to a government owned/contractor operated facility has not been executed in any previous BRAC.

DOD IGNORING POTENTIAL COST SAVINGS

- \$16 M+ contract awarded 1 Mar 95 for construction of a new maintenance dock facility at Whiteman Air Force Base
- Why is this project being constructed while at the same time closing RRAD Maintenance Mission where there are state-of-the-art equipment, technical expertise, and an innovative and experienced workforce?

**RRAD/DDRT MAINTENANCE MISSION
WORK/STORAGE CAPACITY**

- **RRAD uses 3,201,038 SF for maintenance mission**
 - ANAD has 164,600 SF excess capacity**
 - ANAD shortfall of 3,037,038 SF to assume RRAD mission**

- **RRAD uses 1,697,000 SF storage space for maintenance supplies**
 - ANAD has 0 excess storage capacity for maintenance supplies**
 - ANAD shortfall of 1,697,000 SF to assume RRAD mission**

- **RRAD/DDRT uses 111 acres on which to store vehicles**

- **RRAD has an abrasive process (equipment) for ALUMINUM hulled vehicles**

- **RRAD/DDRT has a test track where the infantry fighting vehicle can be FULLY tested as to speed, power, and swimming ability**

- **DDRT is a key distribution activity for tracked and wheeled vehicles**
 - 60 ton bridge crane complex**
 - Large & diverse materiel handling equipment/expertise**
 - Combat vehicles airlift capability**

- **DDRT equipped with three OSHA/State approved drive-thru paint booths for CARC painting**

- **DDRT preservation and packaging capabilities provide processes for any environmental or war conditions**
 - Chemical cleaning vats**
 - Abrasive cleaning systems**

POINT PAPER

The Test Measurement and Diagnostic Equipment Support Center (TSC) located at Red River Army Depot has the following capabilities.

The TSC is located in building 300 which is a specially designed building designed to maintain a constant temperature and humidity. Building 300 has a special microwave screen room and two independent laboratories, one electrical standards and one physical/dimensional standards. The complete facility is built on a floating foundation of steel and concrete pillars set in the earth approximately 18 feet. This floating design eliminates virtually all vibration from the laboratories and allows for precision measuring without interference from tracked vehicles passing the building.

A total of 11 employees are employed at the TSC Red River with an annual payroll of \$392,505. Of these employees 4 work in the electrical standards lab and 3 work in the area of physical/dimensional measurements the remaining employees are production control and supervision.

Annual Calibrations for the TSC are 10,500 with an Instrument Master Record File of 11,703 items. An additional 1728 Small Arms and Ammunition gages are certified for all active Army units, Army Reserves, National Guard, and contractor facilities West of the Mississippi River. The Little Rock Sector of the Federal Aviation Administration (FAA) TMDE workload is currently being performed by TSC-Red River.

A small sampling of the accuracies and capabilities at the TSC Red River follows:

DC Voltage: accuracy, 1.5 ppm or 0.00015%
AC Voltage: accuracy, 0.015%
Resistance: accuracy, 1.5 ppm or 0.00015%
Temperature: accuracy, 0.01 degrees Celsius.
Frequency and Time: accuracy, 5 parts in 10 Billion
Phase Measurement: accuracy, 0.2 arc-seconds
Microwave: capability to 18 Gigacycles per second
Length: accuracy, one millionth of an inch to 5 inches
 accuracy, one ten millionth of an inch to 30 inches
Weight: one micro gram to 60 lbs to level S-1 accuracies
 accuracies, to 9.5 milligrams at 50 lbs
Force: to 60,000 lbs with accuracies to 0.22 lbs at 60K
Torque: to 5,000 ft lbs with accuracies to 0.5% of torque applied

Note: a. ppm = parts per million
 b. All accuracies are traceable to The National Institute of Standards and Technology (NIST).

POC: Loyd D. McDaniel 334-2538 FAX: 334-2651

INFORMATION PAPER

U.S. ARMY TEST MEASUREMENT AND DIAGNOSTIC EQUIPMENT SUPPORT CENTER

SUBJECT: TMDE Support Center (TSC) - Red River

ISSUE: Calibration and repair support to the non-divisional TMDE for U.S. Army and other organizations in the TSC-Red River area. TSC-Red River supports the test measurement and diagnostic equipment (TMDE) located at Red River, as well as the Defense Logistic Agency (DLA) co-located at Red River. TSC-Red River also performs all calibration of small arms and ammunition gages west of the Mississippi River (Please refer to map at enclosure 1). TSC-Red River supports the Federal Aviation Administration (FAA) at Shreveport, Louisiana and Texarkana, Arkansas.

FACTS:

1. TSC Chief. Mr. Don M. Geuntz, DSN 829-2538 COMM. (903) 334-2538

Commander, RRAD, Col. R.W. Hall
Commander, DLA, LTC. Andrew T. Knapper

Point of contact for the above information is Loyd D. McDaniel DSN 829-3004 COMM. (903) 334-2538

INFORMATION PAPER

1. MISSION STATEMENT:

a. The mission of the Reserve Component Training Office is to administer the Reserve and National Guard Active Duty Training (ADT), Annual Training and In-Active Duty Training.

b. The functions of the office are to coordinate assignments of trainees, evaluate training effectiveness and coordinate with depot managers for training support; requisition property and supplies and maintain records.

2. FULL TIME MANNING (STAFF):

Military Training Program Coordinator, GS-11 (OCT)
Depot Defense Assistant, GS-07 (OCT)

RRAD is an attractive training site as we are the only depot with maint, ammo & supply missions. We also take pride in our partnership MOS qualification program where the civilian and reservist work side by side. We not only ask for specific units to train at RR but some units ask to train here because of the excellent training received here.

Last year we trained 42,028 mandays; we have trained 5,552 mandays to date, and will train approx 40,000 mandays by year end.

4. TYPES OF UNITS WE CAN TRAIN:

Supply	Engineer	Med Detach
Maintenance	Military Police	
Ammunition	Transportation	
Service	Postal	
Quartermaster	Rail Battalion	

5. We attend site/date scheduling conferences for 1st, 2nd, 4th, 5th and 6th armies during Feb - Mar timeframe at which time units are assigned sites and dates for Annual Training.

6. In December we will hold a pre-camp conference where a representative from each unit will attend. We will give guidance on obtaining subsistence, finance & accounting, training opportunities, MWR, Health Clinic, or any other areas of interest to the unit. At this time we ask each unit to fill out a form listing specific requirements for their AT period. We review the form and began preparation for their Annual Training period.

We will be in constant contact with our customers, prior to their AT period at RRAD. Our goal in the Res Trng Ofc is to meet each

and every need and request of the customer training here at the depot.

We provide: Transportation to & from airport
(Buses, vans, sedans (VIPS/visitors), Reefer

We provide POL (Petroleum, lubes and oil for vehicles)

Billeting - In garrison (250) or Bivouac (2 sites)
Linens

Dining Facility & Completely furnished Mess Hall

Supplies/Materials (SSSC) (Forms)

Safety - Hearing protection/belts/glasses/steel tips

Repair Parts/Tires, etc.

Job Assignments (areas of expertise by MOS
Military Occupation Specialty)

Training Needs: Evaluator - Complete TAMS (Training Assessment
Model)

Repelling - Tower/Master Repeller

porta-potties MOOT Training - (Military Occupation of Urbanized
Terrain)

Classroom Training - 90 ARCOM Reservists on post
Reservists has own trng

Rifle Range - Weapons Qualification
At night Tracer rounds
Used by employees, 4-H Club, DEA
East TX Police Academy

Black Out Drives - Approx 20 mi drive around
perimeter road.

RECREATIONAL NEEDS: Comms Club (Parties at Club/Lake)

MNR

Gym

Track

Swimming Pool

Post Exchange Will open any hours req'd

Elliott Lake (swimming, fishing, barge, boat)
camping, cabins

Vehicles (Dallas, Little Rock, Shreveport)

We request an after-action report from each unit prior to leaving

the depot to receive feedback. We ask for positive and negative areas of training at RRAD. Where we can continue doing the positive things and correct the negative issues.

RRAD also provides quarters, food & parking for convoys traveling to another destination for Training. Last month 100 people, 51 tractor trailers. Ate at club, refueled at Hooks, on their way.

Due to reorganization, this office also is responsible for the depot emergency operations center and all emergency plans: Civil Disturbance Plan, Disaster Control Plan, and mobilization planning. We maintain a call-back roster for all circumstances, civil or natural disasters.

Rewarding - Plaques

1. Total support to Soldier
2. Feedback from units for continuous support
3. Quality of Life for Soldiers on AT

Quality of Life Improvements

1. Install mini blinds
2. Upgrade range - Electronic pop-up targets
3. Repaint Building

Army Depots

Red River Army Depot, Texas

Category: Depots

Mission: Depot Maintenance

One-Time Cost: \$ 7.2 million

Savings: 1996-2001: \$ 83.9 million

Annual: \$ 20.0 million

Return On Investment: 1997 (Immediate)

Final Action: Realign

COMMUNITY CONCERNS

The community argues that closure of Red River Army Depot will destroy the special efficiencies that result from collocation of the Red River Army Depot with the Defense Logistics Agency Distribution Depot, Red River. They claim DOD substantially deviated from the Final Selection Criteria by not conducting a combined value assessment of the two. They also believe closing Red River Army Depot will overload Anniston Army Depot, limit surge capability, and jeopardize readiness. Retention of only one maintenance depot for ground combat vehicles will severely limit the Army's ability to respond to national emergencies. The community also believes that the Army understated the costs associated with the recommendation. Additionally, the community claims the Army analysis is flawed by omitting significant mission requirements, such as the Missile Recertification Office, and by including non-BRAC personnel savings. The community also believes the Army understated unemployment costs in their economic analysis. The community proposes retention of Red River Army Depot and Anniston Army Depot, realignment of Letterkenny Army Depot to Anniston and Red River, and downsizing of both to core. To fill vacant infrastructure, the community recommends depot teaming with industry.

COMMISSION FINDINGS

The Commission found the Army has treated all its depots equally. The Army's recommendations were an aggressive approach to minimize depot infrastructure, maintaining the minimal capacity to support Army peacetime and wartime requirements. In addition, the Army recommendations supported its stationing strategy and the operational blueprint. The Army's operational blueprint, however, assumed too great a risk in readiness in the attempt to reduce infrastructure costs. While Anniston Army Depot, Alabama, has the capacity to accept the ground combat vehicle depot maintenance workload from Red River, the Commission found that placing all this workload into a single facility places too much risk on readiness. Retention of

both Anniston Army and Red River Army Depots keeps the Army's top-rated ground combat depots and preserves future readiness.

COMMISSION RECOMMENDATION

The Commission finds that the Secretary of Defense deviated substantially from final criterion 1, and therefore, the Commission rejects the Secretary's recommendation on Red River Army Depot, and, instead, adopts the following recommendation: Realign Red River Army Depot by moving all maintenance missions, except for that related to the Bradley Fighting Vehicle Series, to other depot maintenance activities, including the private sector. Retain conventional ammunition storage, intern training center, Rubber Production Facility, and civilian training education at Red River. The Commission finds this recommendation is consistent with the force structure plan and final criteria.

ARMY DEPOTS

BASE ANALYSIS
RED RIVER ARMY DEPOT, TEXAS
DEFENSE DISTRIBUTION DEPOT RED RIVER, TEXAS

DOD RECOMMENDATION:

- Close Red River Army Depot. Transfer ammo storage, intern training facility, and civilian training education to Lone Star Army Ammunition Plant. Transfer light combat vehicle maintenance to Anniston Army Depot, AL. Transfer the Rubber Production Facility to Lone Star.
- Disestablish the Defense Distribution Depot Red River, Texas. Material remaining at DDRT at the time of disestablishment will be relocated to the Defense Distribution Depot Anniston, Alabama, (DDAA) and to optimum storage space within the DOD Distribution System.

RED RIVER ARMY DEPOT

(CHART ONE) BASE ANALYSIS

GOOD MORNING, COMMISSIONERS.

RED RIVER ARMY DEPOT PROVIDES A VARIETY OF SUSTAINMENT MISSIONS FOR THE DEPARTMENT OF DEFENSE. KEY ARE MAINTENANCE AND OVERHAUL OF LIGHT COMBAT VEHICLES; REMANUFACTURE ROADWHEELS, TIRES, AND TRACKSHOES; AND STORAGE/MAINTENANCE OF AMMUNITION. COLLOCATED WITH THE ARMY DEPOT ARE SEVERAL TENANTS, LARGEST OF WHICH IS DEFENSE DISTRIBUTION DEPOT RED RIVER. THESE ACTIVITIES PERFORM THEIR THESE MISSIONS WITH OUTSTANDING RESULTS.

THE DEPARTMENT OF DEFENSE'S JUSTIFICATION FOR CLOSING RED RIVER ARMY DEPOT IS THAT CURRENT GROUND MAINTENANCE DEPOT CAPACITY EXCEEDS REQUIREMENTS. RED RIVER CANNOT ASSUME THE HEAVY COMBAT VEHICLE MISSION FROM ANNISTON WITHOUT CONSIDERABLE AND COSTLY MODIFICATIONS. AVAILABLE CAPACITY AT ANNISTON MAKES REALIGNMENT OF RED RIVER MOST LOGICAL. CLOSURE OF RED RIVER ARMY DEPOT IS CONSISTENT WITH THE RECOMMENDATIONS OF JOINT CROSS-SERVICE GROUP FOR DEPOT MAINTENANCE. JUSTIFICATION FOR CLOSING THE DISTRIBUTION DEPOT IS ITS COLLOCATION WITH THE MAINTENANCE DEPOT UNDER RECOMMENDATION FOR CLOSURE.

SHOWN ON THIS LEFT IS A SUMMARY OF BASE ANALYSIS DATA FOR THE RECOMMENDATION TO CLOSE RED RIVER ARMY DEPOT. THE COLUMN ON THE RIGHT REFLECTS THE RECOMMENDATION TO CLOSE DISTRIBUTION DEPOT RED RIVER.

MOST IMPORTANT FOR RED RIVER ARMY DEPOT ARE THE HIGH NET PRESENT VALUE AND PERSONNEL IMPACTS.
ALSO NOTICE THAT THE ARMY SHOWS AN IMMEDIATE RETURN ON INVESTMENT.

(CHART 2) ISSUES REVIEWED

IN OUR ANALYSIS, WE REVIEWED SEVERAL ISSUES. I WILL BRIEF THE MAJOR ISSUES, WHICH YOU SEE TO THE LEFT. I AM ALSO PREPARED TO BRIEF THE MINOR ISSUES, SHOWN ON THE RIGHT, SHOULD YOU DESIRE.

(CHART 3) ISSUES

THE KEY ISSUE IN CLOSING RED RIVER IS THE CAPABILITY OF ANNISTON ARMY DEPOT TO ASSUME RESPONSIBILITY FOR ALL GROUND COMBAT VEHICLE DEPOT MAINTENANCE. SHOULD THE COMMISSION DECIDE TO CLOSE RED RIVER AND LETTERKENNY, ANNISTON WILL BE THE ONLY DEPOT AVAILABLE FOR DEPOT MAINTENANCE OF GROUND COMBAT VEHICLES. REVIEW OF ANNISTON'S CAPABILITY SHOWS THAT CONSOLIDATION OF THESE MISSIONS IS POSSIBLE. AFTER ASSUMING COMBAT VEHICLE WORKLOAD FROM RED RIVER AND LETTERKENNY, ANNISTON WILL BE OPERATING AT 78% OF CAPACITY ON A 1-SHIFT, 8-HOUR, 5-DAY A WEEK, SCHEDULE. PROJECTIONS FOR WARTIME REQUIREMENTS WOULD REQUIRE ANNISTON TO OPERATE ON A 2 SHIFT, 8 HOUR, 7 DAY SCHEDULE. THIS IS BASED ON A PROJECTED WORKLOAD OF 8.4 MILLION MAN-HOURS (7.7 MILLION FOR GROUND COMBAT VEHICLES AND 700,000 FOR GROUND SUPPORT EQUIPMENT AND SMALL ARMS).

IMPACT ON THE LOCAL ECONOMY WILL BE SIGNIFICANT. DOD FORECASTS A 7.8% IMPACT ON THE ECONOMY DUE TO THIS RECOMMENDATION. COMBINING THIS WITH THE DLA RECOMMENDATION AND PREVIOUS BRAC ACTIONS RESULTS IN A 6.6% IMPACT.

DISTRIBUTION DEPOT RED RIVER ISSUES

- UNLIKE MOST COLLOCATED DEFENSE DISTRIBUTION DEPOTS, THE DEPOT AT RED RIVER HAS A DISTRIBUTION MISSION THAT IS 80% TO CUSTOMERS OTHER THAN THE MAINTENANCE ACTIVITIES AT RED RIVER ARMY DEPOT. THE COMMUNITY EXPRESSED CONCERN THAT THIS IS NOT ADDRESSED BY DLA IN THEIR ORIGINAL POSITION THAT THE COLLOCATED DEPOT CLOSES IF THE MAINTENANCE ACTIVITY CLOSES. IF ALL THE DOD RECOMMENDATIONS FOR DISTRIBUTION DEPOTS ARE EFFECTED, THERE WILL STILL BE EXCESS CAPACITY IN THE SYSTEM.
- THE DOD RECOMMENDATION INCLUDES \$5.8 MILLION FOR THE MOVEMENT OF 3,406 VEHICLES AND \$12.7 MILLION FOR 66,013 TONS OF STOCK OUT OF RED RIVER. COMMUNITY FEELS THAT THIS AMOUNT SHOULD \$319 MILLION. REVIEW OF THESE FIGURES WITH DEFENSE LOGISTICS AGENCY AND THE ARMY CONFIRM THE DOD POSITION.

(CHART 3) ISSUES, CONTINUED

THE ARMY'S RECOMMENDATION WOULD ENCLAVE SEVERAL ACTIVITIES WITH LONE STAR ARMY AMMUNITION PLANT. TO SUPPORT THESE OPERATIONS, THE ARMY PLANS TO LEAVE 100 BASE OPERATIONS PERSONNEL. COMMUNITY CONCERN IS THAT THERE SHOULD BE ADDITIONAL PERSONNEL FROM CURRENT RED RIVER TENANTS TO CONDUCT NECESSARY OPERATIONS.

ARMY COMPUTED UNEMPLOYMENT COSTS WITH DOD STANDARD FACTORS OF \$174 AND 18 WEEKS. COMMUNITY INPUT INDICATES THAT EACH INDIVIDUAL WILL QUALIFY FOR \$259 FOR AT LEAST 26 WEEKS, SOME AS MUCH AS 52 WEEKS, IN TEXAS. THIS WOULD RESULT IN A TOTAL COST OF \$53 MILLION FOR UNEMPLOYMENT. THE COBRA REFLECTS \$564,000. WHILE THE TEXAS NUMBERS ARE MUCH GREATER, THE ARMY'S USE OF DOD'S STANDARD FACTORS GIVES A STANDARD TO COMPARE AGAINST ALL DOD RECOMMENDATIONS.

ARMY CONSIDERS ALL PERSONNEL AUTHORIZED AT RED RIVER AS UNDERGOING REALIGNMENT OR ELIMINATION AS A RESULT OF THE BRAC ACTION. COMMUNITY ARGUES THAT REDUCTIONS WOULD HAVE OCCURRED DUE TO WORKLOAD DECREASE IN LIEU OF ANY BRAC ACTION. REVIEW OF PROGRAMMED PERSONNEL ACTIONS SHOW 201 PERSONNEL REDUCTIONS REMAINING PRIOR TO BRAC IMPLEMENTATION. HOWEVER, USING THE ARMY'S STATIONING AND INSTALLATION PLAN, 18 NOVEMBER 1994, AS A COMPARISON IS VALID SINCE PERSONNEL FIGURE COMES FROM A SINGLE ARMY PLANNING DOCUMENT AND PROVIDE A STANDARD FOR COMPARISON.

(MINOR ISSUES-----CHART 3A)

MISSILE RECERTIFICATION OFFICE. INITIALLY, ARMY DID NOT INCLUDE THE MISSILE RECERTIFICATION OFFICE IN THE RECOMMENDATION. THE COMMUNITY RAISED IT AS AN ISSUE, STATING THAT THIS OFFICE WAS AN AMMUNITION STORAGE FUNCTION AND SHOULD REMAIN AT RED RIVER. THE ARMY HAS SINCE CONCURRED WITH THE COMMUNITY POSITION.

RED RIVER ARMY DEPOT AWARDS AND RECOGNITION. THE DEPOT HAS RECEIVED SEVERAL AWARDS AND RECOGNITION FOR ITS OUTSTANDING SERVICE. THESE INCLUDE THE FEDERAL QUALITY IMPROVEMENT PROTOTYPE AWARD IN 1995. THE ARMY UNDERSTANDS THAT RED RIVER IS A QUALITY DEPOT AS IS ANNISTON. HOWEVER, THE ARMY HAS EXCESS DEPOT INFRASTRUCTURE.

RECOMMENDATIONS FOR CLOSURE OF RED RIVER ARMY DEPOT AND DEFENSE DEPOT, RED RIVER, ARE SEPARATE. ARMY COMPLIED WITH DOD GUIDANCE TO CONSIDER RED RIVER ARMY DEPOT SEPARATE FROM THE DEFENSE DEPOT. COMMUNITY CONSIDERS THIS A BEING DISADVANTAGEOUS TO THEIR POSITION. TO SEE THE TRUE IMPACT YOU MUST ADD THE TWO RECOMMENDATIONS TOGETHER. HOWEVER, SEPARATING THE RECOMMENDATIONS DOES NOT PRESENT AN INACCURATE PICTURE FOR THE DATA.

FUTURE TEAMING WITH INDUSTRY. COMMUNITY RECOMMENDS THAT ARMY RETAIN RED RIVER AND ANNISTON ARMY DEPOTS. TO OFFSET EXCESS, THEY STATE THAT ARMY COULD TEAM WITH INDUSTRY FOR USE OF INFRASTRUCTURE. ARMY WOULD THEN HAVE ACCESS TO TOTAL CAPACITY IN TIMES OF NATIONAL EMERGENCY. ARMY CHOSE TO ELIMINATE EXCESS BY RETAINING ONE DEPOT.

MILITARY CONSTRUCTION. THE ARMY FORECASTED THAT ANNISTON WOULD NOT REQUIRE ANY MILITARY CONSTRUCTION TO ACCEPT THE MISSION CONSOLIDATION. THE COMMUNITY FEELS THAT THERE WILL BE APPROXIMATELY \$15 MILLION IN MILITARY CONSTRUCTION COSTS. REVIEW OF FACILITIES AT ANNISTON AND THEIR INPUT TO THE DRAFT IMPLEMENTATION PLAN SHOW TWO MINOR PROJECTS FOR ABOUT \$531,000.

(CHART 4) SCENARIO SUMMARY

ON THE LEFT IS A SUMMARY OF HTE RED RIVER ARMY DEPOT RECOMMENDATION. THE COSTS AND SAVINGS SHOWN HERE REFLECT THE COMMISSION'S COBRA RESULTS AFTER INCLUDING THE MILITARY CONSTRUCTION AT ANNISTON. PLEASE NOTE THE CHANGE TO ONE-TIME COSTS AND NET PRESENT VALUE. THERE IS NO CHANGE IN THE RETURN ON INVESTMENT. IN CONCLUSION, OUR ANALYSIS DOES NOT SHOW WHERE THE ARMY SUBSTANTIALLY DEVIATED FROM THE SELECTION CRITERIA. CLOSURE OF RED RIVER ARMY DEPOT SUPPORTS THE ARMY'S STATIONING STRATEGY, REDUCES EXCESS, SUPPORTS CONCLUSIONS OF THE JOINT CROSS-SERVICE GROUP FOR DEPOT MAINTENANCE, AND COMBINES GROUND COMBAT VEHICLE DEPOT MAINTENANCE AT ANNISTON ARMY DEPOT. PENDING YOUR QUESTIONS, THIS CONCLUDES MY PRESENTATION ON RED RIVER ARMY DEPOT.

ON THE RIGHT IS THE DEFENSE DISTRIBUTION DEPOT RED RIVERSUMMARY. THIS RECOMMENDATION ENHANCES DEPOT EFFICIENCY AND PRODUCES MONETARY SAVINGS. HOWEVER, THE RECOMMENDATION DOES HAVE AN ECONOMIC IMPACT ON THE LOCAL AREA, IT RESULTS IN THE LOSS OF AN EXCELLENT DEPOT, AND COULD EXACCERBATE A POSSIBLE STORAGE SHORTFALL.

NEXT CHART.

THIS IS A COMMISSION ALTERNATIVE FOR THE ARMY RED RIVER DEPOT SCENARIO THAT ADDRESSES THE \$531,000 CONSTRUCTION AT ANNISTON ARMY DEPOT, ALABAMA. THE ONLY IMPACT IS A SLIGHT REDUCTION IN THE NET PRESENT VALUE.

Track	51,000	- 400,003
<u>Total</u>	<u>Sq Ft</u>	<u>Cu Ft</u>
	104,884	1,042,501 ✓

Material above may be in support of Rubber Products. Unserviceable is received for rebuild but is often classified as CC "H". Serviceable may have been received from Rubber Products but may be new procurement material.

We also maintain 11,784 Gross Square Feet of Chilled Space. We do store minor quantities of photo supplies and batteries there but it is predominantly for raw rubber in support of Rubber Products.

We maintain 600 gross square feet of air conditioned, ventilated space for storage of adhesives- Most is cham lock in support of Rubber Products.

Defense Depot Red River (DDRT), located at Texarkana, TX. is the sole distribution depot for the Single Channel Ground & Airborne Radio System (SINGGARS) fielding effort. SINGGARS encompasses the issue and installation of the latest military communications equipment to the entire Army. Fielding efforts began Oct. 1989 with approximately 54,000 configurations installed to date. At present, fielding efforts are anticipated to be completed by May 2000, with approximately 94,000 configurations still to be fielded. Each configuration represents an Army vehicle or radio infantryman scheduled to receive SINGGARS.

With DDRT being the sole distribution location for the SINGGARS fielding, DDRT is vital for the continued success of fielding efforts. DDRT has also supported troop readiness by issuing SINGGARS assets in support of military conflicts such as Desert Storm, Haiti, Somalia, and most recently, Kuwait. In Nov. 94, DDRT shipped 68,500 lbs. of SINGGARS equipment to Kuwait through Dover AFB. De. An additional 15 semi-loads of equipment were prepared and staged at DDRT for immediate shipment if circumstances had warranted it. Any effort to relocate fielding assets would cripple fielding efforts and jeopardize troop readiness.

FACTS CONCERNING SINGGARS SUPPORT

- Approximately 16,000 installation kits stored at DDRT awaiting disposition for fielding.
- Approximately 10,000 receiver/transmitters units or related controlled cryptographic (CCI) equipment stored at depot requiring tracking of activity by unit serial number.
- Approximately 71,000 square feet of DDRT covered storage space occupied by SINGGARS assets.
- Approximately 30,000 square feet of DDRT work area utilized in preparing SINGGARS assets for fielding.
- Approximately 30,000 square feet of working space utilized by RRAD for fabrication of SINGGARS installation kit components.
- 21,327 installation kits scheduled for assembly by DDRT with RRAD manufacturing required bracketry. Total dollar values in excess of 7 million and man-hours in excess of 70,000.
- Personnel utilization to support kit assembly efforts at RRAD is in excess of 50 personnel.
- Three DDRT personnel dedicated to coordination of fielding and kit building efforts. 1 DDRT employee dedicated to SINGGARS serialization tracking program
- Personnel utilization to support fielding and kit assembly at DDRT is in excess of 50 personnel. Majority of DDRT work force deals with SINGGARS items on regular basis.
- FY95 fielding shipments include 2299 MROs shipped in support of 66 fielding efforts.
- Total tonnage shipped FY95 is in excess of 846,000 lbs.

TASK: Define the effects upon readiness and fielding efforts to the Single Channel Ground and Airborne Radio System (SINCGARS) if all project assets and related project efforts were moved from DDRT to another location.

1. Time Required:

Based on figures presented below, a very conservative estimate of one year would be required to move all fielding assets and relocate in a storage facility in a manner that would support fielding efforts as is currently being supported. PM SINCGARS plans fielding schedules approximately 2 years in advance, setting firm dates with units for their equipment to be available for installation. Any major move of assets will affect at least two years of planning and scheduling by PM SINCGARS. Ongoing fielding efforts for FY95 involve about 12 fielding locations with approximately 80 fielding contractors stationed over much of the U.S., Korea, Germany and Italy. This is in addition to assets be unavailable for immediate issue to units requiring expedited equipment due to mission requirements. Practically every major Army effort recently has involved units previously fielded with SINCGARS and requiring additional support of repair parts, or units that had priority requisitions processed for SINCGARS equipment to be issued to them.

SINCGARS through DDRT has supported troops involved in Desert Storm, Kuwait, and Haiti. SINCGARS has even supported one effort where a special forces unit representative received material directly, no destination was known.

Installation Kits at DDRT	15570	
Loads to leave DDRT		130
(Based on 120 per load)		
Amp Adapters at DDRT	7594	
Loads to leave DDRT		13
(Based on 600 per load)		
Controlled Cryptographic Items	9196	
Loads to leave DDRT		9
(Based on 1000 per load)		
Material stored in MSC Vans	27 Vans	
Loads to leave DDRT		14
(Based on 2 vans per load)		
Support Items	1536 Lines	
Loads to leave DDRT		<u>42</u>
(Based on support =25% additional)		
Total Loads to leave DDRT	208	

This total is an estimate of fielding assets only. It does not take into account installation kits currently being assembled at DDRT or UNICOR, or all assets on hand

required for kit assembly action. Total lines involved in the movement of the fielding assets would be in excess of 1700

DDRT is the sole Distribution Depot for the fielding of SINGARS. To discontinue work for any period of time whether, it be in the area of Installation Kit Assemblies or the fielding of SINGARS assets stored at DDRT would affect the readiness of combat units already engaged in fielding or scheduled for fielding by PM SINGARS in the future.

PM SINGARS contracts with DDRT to fabricate installation kits required to meet forecasted fielding requirements 6 to 18 months prior to actual delivery of the kits themselves. Lengthy lead times are required to allow components ie. cables, hardware kits, antennas and fabricated aluminium bucketry to be contracted, produced and delivered to DDRT in sufficient quantities to support assembly contracts. If current production of installation kit configurations required to satisfy immediate fieldings were delayed to move the operation, short term fieldings would in-turn be delayed. In the long term, amendment and reissuing of contracts, redistribution of funds, transportation of assets, retraining of new personel, and to begin production of installation kits where DDRT left off would have a dramatic affect upon readiness and future fielding schedules.

Message:

1. By directive of the Commander MICOM, the command Mobilization Planning Office is required to maintain contingency packages of class IX spare and repair parts in support of Micom equipment fielded to Rapid Deployment Forces and the PATRIOT air defense system
2. These packages are currently uploaded into vans at DDRT and, as required by MICOM, are mobile within 24 hours of deployment notification. Hands on management of these packages, during peacetime, is performed by MICOM trained personnel within your organization.
3. It is my concern that, since (to my knowledge) no other depot storage location offers the capabilities and versatility of the DDRT Special Projects Office, the MICOM's capability to support a rapid deployment scenario will be seriously degraded if DDRT is closed by BRAC 95.

Comments: Hi, Let me know if you need
more specific info than this paper has.
Ken also plans to incorporate information
about the tools in the paper he's putting
together.

Karyn

The Red River Special Project Office provides an invaluable service to the Bradley Fighting Vehicle System PM with their management of the Bradley Special Tool Program.

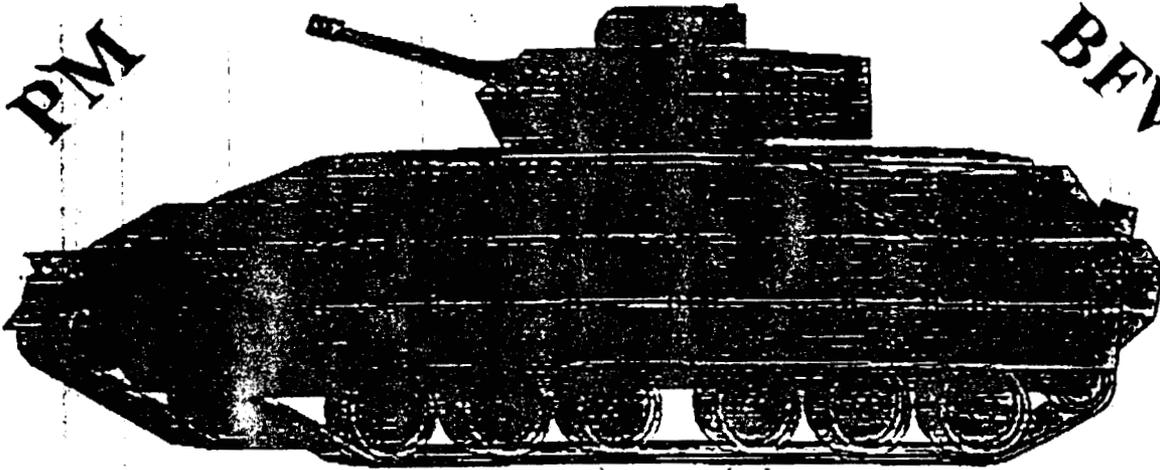

Special tool sets assembled and shipped by the Special Projects Office are always as complete as possible and shipped in a timely manner to insure that all Bradley fielding requirements are met. They actively follow any shortage that may exist in a set and ship it to the fielded unit as soon as it is available. They also track the shipments to insure their arrival and trace any shipment that may encounter transportation problems.

The Special Project Office's response time to unplanned or emergency requests for tools is excellent. With their help, we are able to maintain the readiness of the Bradley fleet, in both CONUS and OCONUS locations.

Red River Projects Office Support to PM, BFVS -

Over the course of several years the Projects Office at Red River has provided the Bradley PMO with a multitude of services. Some of the things it has done include the following:

a. First and foremost, that office has acted as the focal point in obtaining parts for the Materiel Fielding Teams (MFTs). The projects Office has requisitioned, received, and shipped to the MFTs parts to support our fielding efforts, parts needed to support vehicle deprocessing and new equipment training efforts.

b. That office has stored and kept accountable records for the parts they have obtained. Mainly, these parts have been requisitioned by that office for MFT support. Also, they received shipments of stock from contractor activities (contracted for or support package excess), and MFTs (excess from support packages).

c. The Projects Office has also received, stored, and issued other materiel for us - special tools and TMDE for our fieldings, modification kits for vehicle improvement programs, parts we procured that are to be used for production support or some other type of project that needs a temporary home before a consolidated package shipment is made (such as for test support), as well as materiel for special projects our office has supported.

d. In years past, Projects Office personnel have gone to fielding sites, test sites, and to other support sites to maintain accountability of support packages we've had for sustaining those various projects.

For all of these activities, the Projects Office has performed an invaluable service. They've done many things that are out of the ordinary, performed services their expertise has been able to render that we would have found extremely difficult to accomplish without their presence.

MEMORANDUM FOR Office of the Commander, Building 81, Defense District Region West, Post Office Box 960001, Stockton, CA 95296

SUBJECT: Parts Requisition Support

1. PM SINGARS has been informed that Red River Army Depot may be prohibited by the Defense Logistics Agency from requisitioning installation kit components due to accounting problems.
2. PM SINGARS has funded Red River Army Depot for the production of over twenty-four thousand installation kits over the past four years. Actions are in process for a subsequent procurement for over six thousand installation kits.
3. In order to produce an installation kit, numerous parts are requisitioned and assembled to complete this effort. If Red River Army Depot is no longer authorized to requisition the piece parts/installation kit components, PM SINGARS would be forced to look into alternative producers of installation kits to support the fielding of the SINGARS Radio.
4. SINGARS is a major DOD program and has been satisfied with the excellent support provided by ERAD. We request that any policy change that impacts this support in a negative manner be rejected.
5. POC is LTC Ed Jones, DSN 995-3075.

MEMORANDUM OF MEETING

SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group
(BRACEG) Meeting - 27 December 1994 (Afternoon Session)

I. PURPOSE: To provide the BRACEG an updated analysis of Military Value for DLA installations (enclosure 2) and to review a proposal to use standard costs in materiel movement estimates (enclosure 3). A list of attendees is at enclosure 1.

II. BRIEF SUMMARY OF DISCUSSION:

A. An installation Military Value analysis update to reflect changes made from the initial analysis presented on 21 December 1994 was provided.

1. The initial analysis reflected the Military Value of the installation host which was acquired from two separate activity categories (Inventory Control Points (ICPs) and Distribution Depots). It did not reflect all the significant missions being accomplished on the installation. This data element was changed to identify significant missions on the installation. All activities located on the installation having more than 400 assigned personnel were included since they have an important impact on the installation. The BRACEG believed that organizations with 300 assigned personnel (in lieu of 400) would be more appropriate, given the BRAC law which applies at installations with at least 300 authorized civilian personnel.

2. The elements associated with the number of DLA and non-DLA tenant organizations were merged and the points associated with the elements were added together.

3. Base Operating Support (BOS) costs applicable to the Defense Construction Supply Center (DCSC) were specifically reviewed. About eight percent of overstated costs were eliminated from the BOS cost total for DCSC. Generally speaking, BOS costs will be higher in an ICP than a distribution depot. The white collar environment in an ICP results in higher grade levels and more administrative requirements; such as, supplies, printing, and audiovisual needs.

3 FEB 1995

4. The element in paragraph IVA1 (excess space available since no longer required for operational needs) reflected in the 21 December briefing was changed to additional personnel that could be accommodated in administrative space (using the DLA 130 square feet per person standard). It was noted that this space was all over the base and a rehabilitation military construction would be required to gain use of the added space.

5. The available land element was modified to accommodate the large difference in buildable access between the Defense Distribution Depot Ogden (DDOU) (995) and the location with the next highest buildable acres (296.5 at Tracy/Sharpe). The identification resulted in both DDOU and Tracy/Sharpe receiving the 100 maximum Military Value points for this element. The remaining activities were evaluated in concert with the Tracy/Sharpe acres available, because the buildable acres available (between 37-136) at these locations were more comparable with Tracy/Sharpe. Buildable acres available at DDOU would be much greater than what would be possibly used/built upon in any scenario, so the grouping of the five locations (New Cumberland, Tracy/Sharpe, Defense Distribution Depot Memphis (DDMT), DDOU, Defense General Supply Center (DGSC), and DCSC) with the lower buildable acres provided a fairer evaluation. After much discussion, the BRACEG agreed that the BRAC Working Group should develop a worst case scenario of acreage needed for a new ICP/distribution depot foot print and evaluate this element based on the results of that scenario.

6. The inclusion of Morale Welfare and Recreation (MWR) available land in buildable acres was discussed at the 21 December BRACEG meeting. The only significant parcels of land associated with MWR activities were golf courses at New Cumberland (43 acres), DCSC (41 acres), and DDMT (24 acres). The golf course at New Cumberland could not be built upon because it is in a runway clear zone and at DDMT, 5 of the 24 acres could not be used because of contamination in a lake/pond. Since two of the three golf courses could not be fully utilized it was agreed not to include them in the buildable land element; however, the MWR land could be used as necessary to accommodate projected incoming organizations/personnel.

7. The environmental issues at Tracy/Sharpe and DDOU were discussed. These locations received no points because each had some air quality restrictions that would need to be considered if they were to become receivers in a scenario. There was some expectation that if they did become receivers, the applicable state would work to deal with these air quality issues so as not to inhibit the accommodation of additional personnel.

B. Bin/Bulk Packaging Costs. As a result of a review of the "one time unique costs" identified by DDMT, proposed standard bin and bulk cost per ton figures were developed and presented to the BRACEG.

CAAJ(BRAC) PAGE 3 CLOSE HOLD
SUBJECT: Summary of Base Realignment and Closure (BRAC) Executive Group
(BRACEG) Meeting - 27 December 1994 (Afternoon Session)

3 FEB 1995

III. DECISIONS REACHED:

A. DLA installation Military Value analysis changes were approved except as noted in paragraph IIA5 above.

B. The BRAEG agreed to use standard cost per ton bin and bulk cost figures as noted at enclosure 3.

IV. FOLLOW-UP ACTIONS:

A. Change the threshold for "significant" organizations from 400 to 300 in the Installation Military Value—CAAJ(BRAC).

B. Develop a worst case scenario of buildable acres that would be needed to accommodate DLA missions and revise the evaluation of paragraph IVA2 of the Installation Military Value portion (does the base have available land to build upon) of the briefing chart per discussion in paragraph IIA5 above—CAAJ(BRAC).

Bulk	=	\$140.53

Aggregate = \$201.50/Ton

ANALYSIS OF COST PER TON ISSUED DEVELOPMENT

- Data presented to DLA BRAC Executive Group Meeting, 3 Feb 95.
- Decision reached to develop standard Cost Per Ton Issued numbers for BRAC use in COBRA analysis

Tons shipped during 1st Quarter FY 95 used to develop base data

1st Quarter not a good timeframe due to:

- A. Customer funding not totally in place
- B. Historically a slow period, as opposed to other times of year

Cost data from FY 95 budget used for dollar values

- A. FY 95 dollar figures are estimated
- B. Realignment (reallocation) of funds normally required to complete year's shipments
- C. Transfer of mission stocks and equipment from BRAC 93 closures not taken into consideration

- Basis of BRAC Data Call was to use statistics as of 30 Sep 94

Tons shipped and cost figures should be computed on FY 94 actual, not FY 95 estimate

MILITARY INSTALLATION COMPLEX

- Relocation costs for tenants
- Community/economic impact of relocation
- Tenants to be relocated:

DDRT to DDRW		1205

Mission Equipment, Supply Equipment and Military & Heavy/Special Vehicles

DDRT figures taken from BRAC 95 Data Call submissions

1-Time Moving (Transportation) & 1-Time Other (Labor)

Vehicles - 13,740 total

Labor to load at DDRT - \$33,614,882

Labor to unload at DDAA - \$9,552,325

Transportation - \$19,905,270

Secondary Items - 129,464 tons total

Active - 72.92%

Dormant - 23.5%

War Reserve - 3.21%

Foreign Military Sales - 0.38%

Labor to Pick, Package, Pack and Ship - \$1,587.33 per ton

DDAA - 7.4% of stock - 8,934 tons

Cost/42,000 lb truck - \$1,124 - 425 trucks

Labor to ship - \$15,207,155

Transportation - \$512,776

DDJC - Active + FMS - 87,880 tons

Cost/42,000 lb truck - \$3,300 - 4,185 trucks

Labor to ship - \$139,494,819

Transportation - \$13,809,740

DEPOTX - Dormant + War Reserve - 32,004 tons

Cost/42,000 lb truck - \$2,093 - 1,524 trucks

Labor to ship - \$50,800,117

Transportation - \$3,189,682

ADDITIONAL COBRA FACTORS

Not Considered In \$329M Model

NOTES: (Information obtained since COBRA model was run)

1. Costs to process receipts at Receiving Depots: (Standard \$29.71 DLA Unit Cost)

DDAA - \$380,367
DDJC - \$3,489,098
DEPOTX - \$1,270,632

This would increase the 1-Time Other costs by \$5,140,097.

2. DLA support to RRAD Rubber Products Operation.

26,591 SF (633,803 CF) General Purpose Warehouse Space for Unserviceable Track & Roadwheels
27,344 SF (408,698 CF) General Purpose Warehouse Space for Rebuilt Track & Roadwheels
12,384 Gross SF Chilled Warehouse Space for Raw Rubber Products & Adhesives
13,680 SF Required for Specialized Preservation & Packaging of Track & Roadwheels
Approx. 10 employees for Receipt, Inspection, Classification, Storage, Preservation, Packaging, Issue and Shipment of Rubber related products

3. DLA support to RRAD Ammunition Operations.

8,259 SF (75,572 CF) General Purpose Warehouse Space for storage of inert ammo items
1 MY to support Inspection, Hazardous Disposal, Fabrication & Technical Support

4. Environmental cleanup

Approximately \$6,000 environmental cleanup per vehicle. NOTE: Not all vehicles would require cleanup. Many vehicles are on approved storage facilities. Many more do not pose an environmental risk. The actual number requiring cleanup would not be known until actual preparation for shipment and removal of the vehicle from its storage site.

5. Truckload Shipment Cost - Vehicles

These figures should be revised to reflect an increase in number of vehicles on-hand and due-in. Also, Labor Load Costs will be decreased to account for less time required to prepare vehicles for shipment.

RRAD & DDRT RUBBER PRODUCTS OPERATIONS

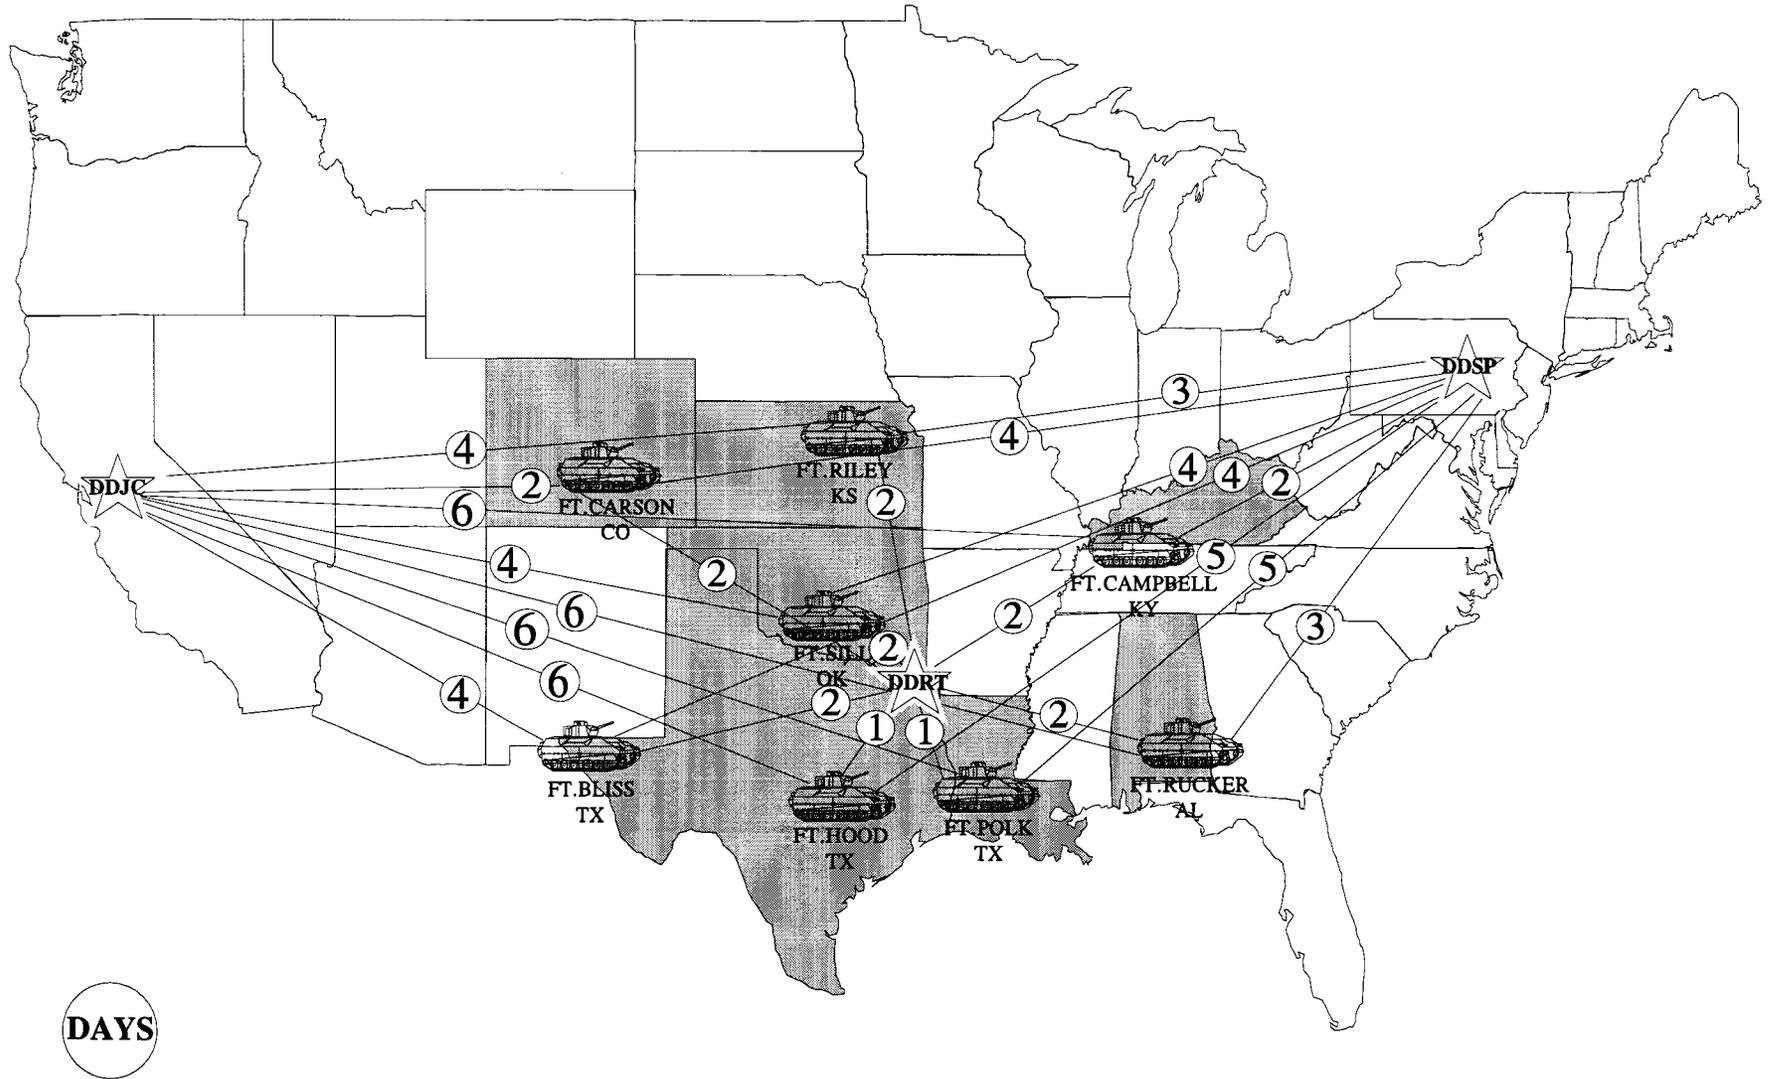

DDRT SUPPORT TO RUBBER PRODUCTS DIVISION

- **Receive, Store and Issue Raw Rubber for Rebuild of Roadwheels and Track**
- **Provide Constant-Temperature Cold Storage (431 South)**
ACF (Attainable Cubic Feet) = 100,000
- **Fabricate Special Pallets for Storage and Shipment of Roadwheels Manufactured by Rubber Products**
- **Apply Special Preservation and Packaging and Palletization to All Track and Roadwheels**
- **Receive, Store and Issue All Serviceable (Rebuilt) Track and Roadwheels from Rubber Products and Distribute to Customers World-wide**
- **Receive, Store, and Issue Unserviceable (Repairable) Assets as Required by Rubber Products**
- **As of Apr 95, DDRT had 1,042,501 Cu Ft of Roadwheels/Track in Storage**

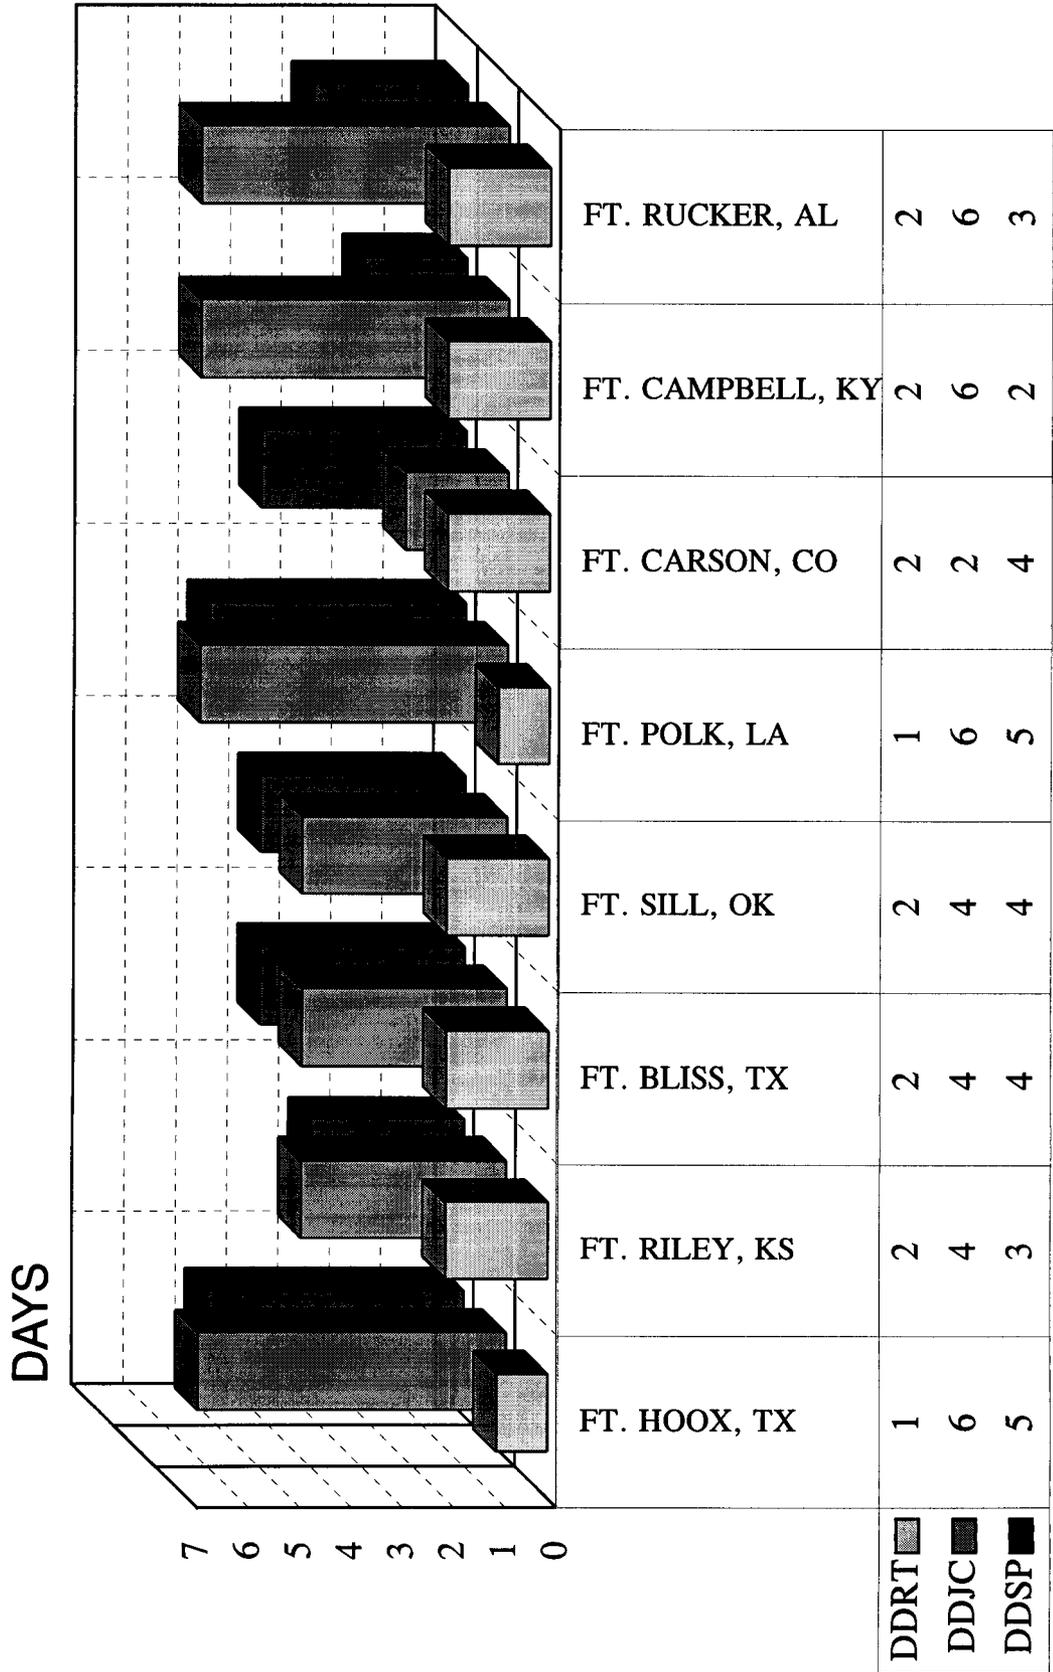

DDRT SUPPORT TO AMMUNITION OPERATIONS

- **Acceptance Inspections on Installed Systems/Equipment**
 - Monitor Vendor Installation of Equipment**
 - Inspect Completed Installation for Conformance to Specifications**
 - Monitor Operational/Functional Test of Equipment**
 - Accept Installation of the Equipment for Government and Authorize Payment**
- **Inspect Lumber for Conformance to Mil-Standard Requirements (Grade, Size, Markings, and Variation of Board Feet Lengths)**
- **Hazardous Materials Storage**
- **Dispose of Hazardous Wastes**
- **Fabricate Cartons/Boxes (Fiberboard/Wood)**
- **Tank Farm Storage (4 Tanks)**
- **Store Lumber and Other Various Items**
- **Provide Packaging Materials**
- **Technical Support (Certifying Materiel for Shipment, Special Packaging Instructions for Certain Items, Cost Estimates, etc.)**
- **Research and Re-route Materiel to Ammunition Area**
- **DRMO Recoup Support (Review Listings of Items Marked for Disposal for Possible Re-use)**
 - FY94 Savings (Recoup) \$ 117,505.26**
 - FY95 Savings (Recoup) \$1,992.144.00**

Red River Defense Complex Input for BRAC Staff

Subject: Flaws in the Army and DLA analysis that lead to the recommended closure of Red River Army Depot and disestablishment of Defense Logistics Agency Distribution Depot (DDRT).

1. The series of events listed below describes the flaws in the logic used by Army and subsequently by DLA in this analyses:
 - a. On Jan 5, 1995, the community requested that Deputy Assistant Secretary of Defense Robert Bayer, and Under Secretary of the Army Joe Reeder consider Red River as a single military complex, inclusive of Red River Army Depot, DDRT and other tenants in its evaluation of military value and cost associated with closure. (Briefing attached at Tab A.) Additionally, Senators and Congressmen stressed the importance of the military complex in a January 30, 1995, letter to the Secretary of Defense. (Tab B)
 - b. The Army recommended closure of Red River Army Depot without consideration of costs associated for disestablishment of DDRT. Provisions were made in its recommendations to enclave the rubber products operation, the ammunition mission, and the AMC School of Engineering and Logistics, including students, under the Lone Star Army Ammunition Plant (LSAAP). No provision was made for continuation or movement of the Missile Recertification Office (93 personnel) which provides for testing of Hawk and Patriot missiles or for the base operations support or movement of the DFAS Non-appropriated Fund Accounting Office (five buildings, 191 personnel). Additionally, no provision was made for support from District Test Measurement and Diagnostic Equipment Center, Regional Defense Reutilization and Marketing Office, and the U.S. Army Health Clinic for the missions enclaving at LSAAP and DDRT.
 - c. DLA's recommendation to disestablish DDRT was driven by the Army recommendation to close Red River (see the DLA BRAC 95 Detailed Analysis shown at Tab C). It was not based on a cost analysis.

2. Based on the above, Congressman Chapman asked several questions regarding subject decisions. Those questions, the service responses, and the community responses are shown at Tab D.
3. The community has concluded that there were extensive flaws in the logic process used by both Army and DLA. It has also concluded that the cost analyses conducted by Army and DLA are grossly inaccurate and are misleading.
4. Attached at Tab U are anticipated questions concerning the community's case and answers prepared for community briefers.
5. Also attached is an excerpt from the community briefing which explains the community estimate of return on investment assuming the Defense Distribution Depot remains an enclaved tenant to Lone Star Army Ammunition Plant. (Tab V)
6. Tab W contains the most recent set of questions submitted by Congressman Chapman.
7. The GAO Audit, April 1995, found that Army was claiming savings for personnel reductions associated with force structure reductions as a part of BRAC savings. (Tab X)
8. During the 19 Apr 95 BRAC Hearing, the community proposed transferring Letterkenny missiles and associated ground support equipment to Red River and Anniston. Tab Y contains information related to that proposal. Since there is sufficient space available at Red River, no military construction would be required.
9. An estimate for the cost to relocate the Missile Recertification Office from Red River is shown at Tab Z.

Red River Army Depot

Red River Army's Depot Industrial Complex

- Red River Army Depot
- Defense Logistics Agency, Defense Distribution Depot Red River
- U.S. Army Health Clinic
- District Test Measurement and Diagnostic Equipment Center
- Defense Finance and Accounting Service, Defense Accounting Office
- Defense Finance and Accounting Service, Consolidated Non-Appropriated Fund Accounting Office
- Army Materiel Command, School of Engineering and Logistics
- Navy, Defense Printing Services
- Regional Defense Reutilization and Marketing Office
- General Services Administration Office
- Detachment of the Criminal Investigation Division

Military Value

Essentiality

- Vital defense industrial complex
- Largest and most diversified depot operation
 - Maintenance, ammunition, supply, and missile recertification missions
 - Only maintenance depot with co-located distribution depot
 - Unique facilities for track and roadwheel rebuild
 - \$51.6M replacement cost
 - 3-4 years to obtain environmental permits
- Supports 75% of all tracked vehicles in Army Heavy Division
- Interservice Support - Marines, Air Force, and Navy
- Unique expertise, teams available for immediate deployment
- Army Reserve and National Guard Training Opportunities in multiple disciplines (18,330 mandays training provided in FY94)

3

Military Value

Suitability

- Excellent transportation network available (air, land, and sea)
- Central location
- Over 50% CONUS installations within supply distribution area
- Excellent environmental record
- Modern facilities; 91% are permanent
- Winner of ACOE awards 1991-94
- Information management support to:
 - Industrial complex
 - Local DoD Customers
 - World-wide DoD Customers

4

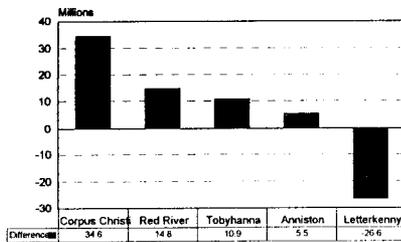

Military Value

Operational Efficiencies

- On-site water and waste water treatment plants and solid waste landfill
- Second lowest direct labor rate in DESCOM
- Area cost factor index - 0.94
- Lowest bids for design and manufacture prototype vehicles to meet multi-service requirements
- Exceeded planned Net Operating Result by \$14.8M in FY94

FY 94 Net Operating Results

Plan vs Actual

5

Military Value

Operational Efficiencies

- Recognized as DoD Center of Excellence for National Performance Review
 - Union-management partnership
 - Reduced layers of supervision from 5 to 3
 - Self-managed work teams
 - Vice President Gore's "Hammer Award", 1994
 - 1995 Quality Improvement Prototype Award Winner
- Showplace for others

6

Military Value

Expandability

- 2139 acres available for unrestricted development
- No restricted air space
- No encroachment by neighboring communities
- On-site solid waste disposal landfill
- Capability to accept additional workload immediately
- Available capacity to accommodate
 - Contingency
 - Mobilization
 - Future total force requirements
- Large qualified labor pool available

7

Return on Investment

- Closing maintenance mission does not generate appreciable savings for DoD
 - Remainder of base infrastructure must still be maintained in support of tenants and ammunition mission
 - Maintenance mission represents approximately 25% of total base operation cost
 - Maintenance mission constitutes only 12% of Defense Distribution Depot Red River (DDRT) workload
 - Current assigned missions are primarily "core" and will require transfer to another depot
- If DDRT is closed, it adds \$314M in one-time costs for movement of stockage alone!

8

Economic Impact

Industrial Complex

- Geopolitically supported by four states
 - Arkansas
 - Louisiana
 - Oklahoma
 - Texas

- Largest employer in local area
 - Approximately 4,100 personnel
 - 28% minority
 - 29% women

- Economic impact \$331M
 - Annual payroll \$168M
 - Contracts \$147M
 - Other \$16M

9

Summary

Red River's DoD Industrial Complex

- Vital component in DoD's readiness to support national policy objectives

- Essential elements
 - Maintenance
 - Ammunition
 - Supply/Distribution

- Meet world-wide requirements

- Immediate expansion capabilities
 - Real Estate
 - Personnel resource base

10

Summary

Red River Army Depot

- Prepared for the Army's power projection mission.
- Experienced in depot level maintenance of:
 - Light tracks - Bradley, MLRS, M113 APCs
 - Heavy tracks - M48A3 conversion, M103 Marine Corps
 - Missile systems - Chaparral, Bradley TOW
 - Artillery - M109, M110, M578
 - Tactical wheeled vehicles -- 5-Ton and 10-Ton Trucks
 - Components - engines, transmissions, accessories
- Modernized, responsive depot with expansion capability for additional DoD work.
- DOD leader in Quality Management and National Performance Review Initiatives

11

Bottomline

Red River Army Depot is the logical choice as a DOD Center of Excellence for vehicle maintenance

12

United States Senate

WASHINGTON, DC 20510

January 30, 1995

The Honorable William Perry
Secretary of Defense
The Pentagon
Washington, DC 20330

Dear Mr. Secretary:

As you near your final decisions on the Defense Department's 1995 base closure and realignment recommendations, we are writing to reiterate the unique contributions of Red River Army Depot, Red River Distribution Depot, and the Lone Star Army Ammunition Plant. Together, they offer DoD unparalleled advantages.

Red River Army Depot not only specializes in wheeled and light tracked vehicles, but also performs vital missile recertification work. The depot covers over 19,000 acres, has 7.5 million square feet of covered floor space, 702 ammunition "igloos," and 18 storage magazines. Over three-quarters of all tracked vehicles in a typical Army heavy division are supported by Red River, which demonstrated its value by deploying over 300 persons and providing over 30,000 man-days of direct support during the Persian Gulf War.

The Defense Logistics Agency's Red River Distribution Depot receives, stores, and issues assets over a wide region of the central United States. Unlike other distribution centers co-located with maintenance depots, only 12% of the distribution workload is in direct support of Red River Army Depot. The depot's primary mission is to support DoD users world wide with a variety of critical supplies ranging from repair parts to fully operational combat vehicles. This vital distribution depot is centrally located with excellent access to road and rail transportation, has 3.5 million square feet of operations and warehouse space, 2.2 million square feet of improved outside storage space, a helipad and 60-ton bridge crane capable of lifting any Army vehicle. In addition, it will also soon activate a new 680,000-square-foot distribution facility that could be easily expanded.

The Lone Star Army Ammunition Plant has a long history of producing top quality munitions, including mines, detonators and primers. It is the group technology center for M77 MLRS grenades and is the only ammunition plant that produces M67 hand grenades, M509A1 projectiles and the modular pack mine system, which includes the Volcano and Gator anti-tank land mines. Lone Star Army Ammunition Plant has 1,130 buildings, 200 ammunition "igloos," and 38 storage magazines on more than 15,500 acres, and recent improvements have been made to the water distribution system, telephone system, landfill, roads and grounds.

The Red River Army Depot (RRAD) has also embarked on a quality mission that sets it apart from other DoD installations. A finalist two years running for the President's Quality Management Award, RRAD has made significant strides in improving how it does business.

Letter to Secretary Perry
January 30, 1995
Page 2

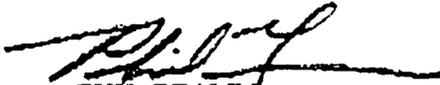

Its accomplishments have been reported in Government Executive magazine and the National Performance Review, and even Vice President Gore has used RRAD as an example of innovative management. RRAD's success has led to visits by over 3,000 representatives from other government organizations seeking to duplicate its success. The results are evident in the bottom line: RRAD exceeded its FY94 planned "profit" level by \$14.8 million.

What truly sets the Red River/Lone Star complex apart, however, are the advantages of co-locating a major Army maintenance depot, a DoD distribution depot and ammunition manufacturing, renovation, and storage facilities. Efficiently providing the necessary world-wide mobility support for MLRS and the Bradley and M-113 armored personnel carriers requires a centrally located distribution facility with easy access to all transportation modes. If the Defense Department were to design an industrial facility from scratch, it would look a lot like the Red River/Lone Star complex.

We believe when you look at the total contribution of Red River and Lone Star to the Defense Department, you will conclude, as we have, that it fills a vital role.

Please contact us if we can provide further information or answer any questions.

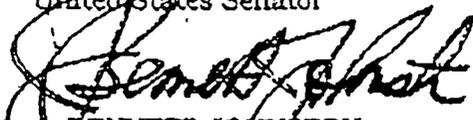

Yours respectfully,

DLA BRAC 95 Detailed Analysis

DEFENSE DISTRIBUTION DEPOT RED RIVER, TEXAS (DDRT)

Recommendation: Disestablish the Defense Distribution Depot Red River, Texas. Material remaining at DDRT at the time of disestablishment will be relocated to DDAA and to optimum storage space within the DoD Distribution System.

Justification: DDRT is a Collocated Depot located on the same installation with an Army maintenance depot. While Collocated Depots may support other nearby customers and provide limited world-wide distribution support, the primary reason for their existence is to provide rapid response in support of the maintenance operation. The Distribution Concept of Operations states that DLA's distribution system will support the size and configuration of the Defense Depot Maintenance System. Thus, if depot maintenance activities are disestablished, Collocated Depots will also be disestablished.

The recommendation to disestablish DDRT was driven by the Army recommendation to realign Red River Army Depot. The realignment of DDRT's primary customer and the Agency's need to reduce infrastructure drove this recommendation. DDRT was rated 5 of 17 in the Collocated Depot Military Value matrix. However, that Military Value ranking was based on support to the maintenance missions. With the realignment of the maintenance mission to Anniston, Alabama, that value decreases significantly. Other customers within the DDRT area can be supported from nearby distribution depots. Production and physical space requirements can also be met by fully utilizing other depots in the distribution system.

Disestablishing DDRT is consistent with both the DLA BRAC 95 Decision Rules and the Distribution Concept of Operations. Military judgment determined that it is in the best interest of DLA and DoD to disestablish DDRT.

Return on Investment: The total estimated one-time cost to implement this recommendation is \$58.9 million. The net of all costs and savings during the implementation period is a cost of \$0.8 million. Annual recurring savings after implementation are \$18.9 million with a return on investment expected in 2 years. The net present value of the costs and savings over 20 years is a savings of \$186.1 million.

Impact: Assuming no economic recovery, this recommendation could result in a maximum potential reduction of 1,602 jobs (821 direct jobs and 781 indirect jobs) over the 1996-to-2001 period in the Texarkana, Texas-Arkansas metropolitan statistical area, which is 2.7 percent of the area's employment. The cumulative economic impact of all BRAC 95 recommendations and all prior-round BRAC actions in the area over the 1994-to-2001 period could result in a maximum potential decrease equal to 7.7 percent of the employment in the area. At DDAA 349 direct jobs and 326 indirect jobs for a total of 675 jobs will be added with a 1.1 percent positive impact on employment and a cumulative economic impact of -14.7

DLA BRAC 95 Detailed Analysis

percent on the Anniston, AL MSA. At DDSP 87 direct jobs and 48 indirect jobs for a total of 135 jobs will be added with a negligible impact on employment and a cumulative economic impact of 0.2 percent on the Harrisburg-Labanon-Carlisle, PA MSA. At DDRW 6 direct jobs and 8 indirect jobs for a total of 14 jobs will be added with a negligible impact on employment and a 0.6 percent cumulative economic impact on the Stockton-Lodi, CA MSA. The DLA Executive Group determined that receiving communities could absorb the additional forces, missions, and personnel proposed.

We reviewed hazardous wastes and materials, wetlands and sensitive habitats, threatened and endangered species, historic and archeological sites, land use and composition, air quality, water quality, and environmental cleanup and compliance costs for their impacts on this recommendation. The Executive Group concluded that environmental considerations do not prohibit this recommendation from being implemented.

Congressman Chapman Questions

Army

1. Was the combined military value and costs of closure of the co-located facilities of Red River Army Depot, Lone Star Army Ammunition Plant, Defense Logistics Agency Distribution Depot (DDRT), and their tenants considered in the overall evaluation as requested of the Army, Defense Logistics Agency, and Department of Defense by the community?

Army Response: Although the Army initially considered the combined costs of the three installations/activities, only costs for Red River and Lone Star are included in the Army's recommendation. The Army considered an option that would retain the DLA Regional Distribution Center in an enclave supported by Lone Star Army Ammunition Plant. However, DLA's analysis supported relocation of their facility. Accordingly, their closure costs are contained in a separate recommendation.

Community Response: The DLA analysis was conducted after the Army made the decision to close Red River. The chart shown at Tab E reflects the proposed scenario briefed to the Secretary of the Army, January 26, 1995. It totally ignores DDRT except in a reference to Other Service/DOD Factors. That scenario was approved. The Army made its decision without knowledge of costs associated with movement of DDRT and without making provisions for base operations support or support required from the Regional Defense Reutilization and Marketing Office and the U.S. Health Clinic. Tab F shows the total elimination of those tenant activities.

The Army did not respond to the question related to consideration of combined military value.

2. In developing workload realignment options, did Army modify the receiving depots capacity to account for the impact of changes in product mix on depot capacity and will Army have sufficient depot maintenance capacity with only one tracked vehicle depot to meet its core maintenance workload requirements and hence its readiness requirements?

Army Response: The product mix (light combat vehicles, missile maintenance, wheeled vehicles, and ammunition storage) and depot capacities of gaining installations were evaluated to ensure that sufficient capacity and capability were available to transfer mission/workload from Red River Army Depot. The Army will have sufficient core capacity with a single ground combat vehicle maintenance depot to meet its sustaining requirements and maintain Army readiness. At the Army's remaining ground maintenance depot (Anniston Army Depot), the depot is workloaded at 100% of its current capacity for core workload. This workloading is based only on a 5 day, 8 hour schedule and considers no overtime/second shift work. Based on Anniston's maximum capacity, the cork workload represents only 71% for core workload or 76% for total workload.

Community Response: The community believes that the Army made no adjustment for changes in the product mix at the receiving depot. Changes in product mix can significantly impact depot capacity. The capacity of a given facility to produce M1 tanks does not have the same capacity to produce wheeled vehicles as an example.

Based on the DoD projected workload closure of Letterkenny and Red River, will overload Anniston to 163% of their capacity (Tab G)

3. The Army, unlike the Air Force, has claimed savings for the workload reductions due to downsizing. Does this not falsely represent and overstate the BRAC savings and distort the analysis?

Army Response: The Army did not base its base closure recommendations on savings realized from workload reductions as a result of downsizing. The savings include reductions as a result of installation closures, realignments of mission to other installations with like capabilities and excess capacities, and the elimination of personnel.

Community Response: The Army's analysis shows the elimination 1847 personnel at Red River and the realignment of only 375 personnel to Anniston (Tab F). A net savings of 1472 personnel are claimed by the Army. The Force Structure workload reductions account for 1018 direct labor personnel and should not be claimed (Tab H). Also note that 72% of the direct labor workload reduction is at Anniston rather than at Red River. The workload reductions suggest that the Army plans closure of the wrong installation. The Army is claiming savings will accrue as the result of realignment of the mission to Anniston. This is not true. The only way to have savings in direct labor is through process improvements. Red River has more automation than Anniston and there would be no significant reduction in the time required to overhaul a Bradley at Anniston. The Army's COBRA (Tab I) identifies \$129 million of recurring savings most of which is due to workload reductions at Anniston. This false savings is the Army's major component used in showing an immediate return on investment. When you take out the savings claimed by the Army that are the result of Force Structure changes not BRAC, the only savings that should be claimed are the savings associated with base operations (Tab J). The community estimate of 337 base operations personnel or 13.1 million per year. This results in a net return on investment of 57 years as opposed to the Army's immediate return on investment (Tab K).

DLA

1. Why does data reflected in the COBRA model drastically deviate from data submitted by the installation, specifically the cost associated with movement of wholesale/retail assets in storage at the Defense Distribution Depot Red River to the Defense Distribution depots at Anniston and San Joaquin and to depot "X"?

DLA Response: The DLA activity at Red River was not asked to determine costs to move inventory. They were asked to provide information pertaining to inventory movement in three areas in their data call submission. The first area was the total tonnage of inventory on hand during the data collection period. The second, was their local transportation rate per ton per mile for the movement of bulk freight. The third was an estimated cost per ton for preparing materiel for bulk quantity shipment. For both depots at Red River and Letterkenny, they were asked to also submit the number and types of vehicles in inventory. In the BRAC office, estimates to move materiel were calculated considering both DLA and coordinated Service inventory reductions and accelerated attrition of materiel at closing sites. Materiel that is excessed by the applicable inventory manager is not considered for movement. Additionally, a closing location will discontinue receipt of new materiel and customer returns but be placed at the top of the list for issuing materiel. The result of these actions will be a much lower level of inventory that has to be moved to the receiving locations when the depot is closed. Once the quantities to be moved were determined, the cost to prepare the stock was calculated per ton by using standard costs for picking, packaging, packing and marking developed by the HQ Distribution Business Office. The costs were predicated on past issues and Defense Base Operating Fund (DBOF) issue costs. Movement costs for vehicles were based on DBOF rates submitted by the depot in their data call and multiplied by the number of miles from the depot to the projected final destination. This is basically the same methodology used in BRAC 93. Historically, our COBRA estimates have been either consistent with or slightly higher than actual expenditures. Therefore, we feel confident that our estimate for stock movement at Red River is reasonable and if anything conservative.

Community Response: A COBRA Comparison and backup narrative of the DLA one-time costs and the community estimate titled "DDRT" is shown at Tab L.

a. DLA calculations were based on the following assumptions:

- (1) Tonnage and vehicles reported at the time of BRAC data call would decline at DDRT.
- (2) BRAC period for closure will be 6 years.
- (3) Total stock will decrease based on inventory reductions, attrition and disposal of excess materiel.

b. The community (DDRT) calculations are based on the following.

(1) From the date of the BRAC data call to March 1995, tonnage for Secondary Items has increased by 5.97% and tonnage for vehicles has increased by 20.66%. Total tonnage has increased by 11%. This is primarily due to receipt of materiel from Defense Distribution Depot Tooele Utah. Projections at time of BRAC data call have been significantly exceeded.

(2) Current plans by Army and DLA are to expedite closure of the facilities by September 1997 (Tab M). The amount of time for inventory reductions, attrition and disposal of excess materiel is reduced from 6 to 2 years. This would result in more lines and tons to be moved.

(3) DDRT remains on the Army Inventory Control Points distribution matrix as a Distribution Center for the Central U.S. DLA's plans for inventory reductions may not apply equally to percentages of Army managed materiel. Based on FY94 issue data, DDRT projects attrition rates to reduce the number of lines by 33% (Tab N) and the tonnage by only 13% (Tab O). (These figures do not take into consideration materiel that is already scheduled to ship to DDRT. This represents contracts which cannot be quickly amended to reroute materiel.) DoD is continuing a major effort to identify and dispose of materiel excess to requirements. Much of this effort has already been accomplished. Current analysis of DDRT stocks show that 72.9% of all materiel is considered active (Tab P) After subtracting War Reserve materiel and stocks for Foreign Military Sales shipments, 23.5% of materiel is considered dormant. It is unknown what percentage of this is excess to managers needs.

c. DLA also states that they requested "an estimated cost per ton for preparing materiel for bulk quantity shipment." However, "the cost to prepare the stock was calculated per

ton by using standard costs for picking, packaging, packing and marking developed by the HQ Distribution Business Office."

d. DLA movement costs for vehicles were based on "DBOF rates for each particular type of vehicle." These rates are being determined and are not scheduled to be incorporated in DLA costing until FY96.

e. Although not considered in the COBRA model, the following costs to close Red River Army Depot and disestablish DDRT should be considered since they result directly from these proposed BRAC actions:

(1) In addition to the COBRA costs to move materiel, each owning Inventory Control Point will be charged the standard DLA Unit Cost price of \$29.71 for each shipment from DDRT and each subsequent receipt at another DLA depot (Tab Q). For Army managed materiel this amounts to \$3.5 million. For DLA managed materiel the cost will be \$4.5 million (Tab R). These costs will be charged to DBOF but will result directly from BRAC actions.

(2) The Defense Reutilization Management Office located at Red River will be closed. It is not considered in the BRAC process since there are less than 300 people affected. However, projected costs for the DRMO closure are 4.8 million.

2. DLA's basis for analysis for co-located depots was "when a military service determined that a maintenance depot was surplus to their need, DLA would consider closing co-located distribution functions." The logic was two fold:

- a. First, the maintenance depot is by far the biggest customer and primary reason for DLA presence. Since Defense Distribution Depot Red River supports the maintenance function at Red River Army Depot and Fort Hood at equal percentages of overall workload, how does DLA justify categorizing support to Red River maintenance as being by far Defense Distribution Depot Red River's biggest customer when eighty percent of the customers are off base?

DLA Response: As our recommendation states, the maintenance depot is DDRT's primary customer. "Primary" is intended to mean in rank of importance. DLA has a commitment to the Services to provide rapid response distribution assistance by maintaining a distribution presence wherever they have a maintenance depot or major fleet support activity. DLA's co-located presence with the maintenance depot helps maintain a high level of readiness by ensuring maximum responsiveness to activities involved in repair/overhaul of weapon systems essential to our warfighting capability. The Red River Distribution Depot is disestablishing because the Red River Army Depot is closing. The general distribution mission or that portion of the depot's workload that is not in support of maintenance, can be accomplished from other depots remaining in the system with no degradation in performance. Throughput and storage space requirements can be met by fully utilizing the capacities at our remaining depot installations.

Community Response:

- a. How can DDRT's PRIMARY ("rank of importance") mission be to support Red River maintenance when 80% of DDRT's business supports off-depot customers?
- b. If all active items (including Army managed items) are relocated to DDJC as proposed in the COBRA model, the Army warfighters in the Central U.S. cannot be supported without a "degradation in performance" (see map at Tab S).
- c. DLA states that "throughput and storage space requirements can be met by fully utilizing the capacities at our remaining depot installations." In the opening testimony for DLA BRAC 95 (Tab T); however, Major General Farrell testified that, "A shortfall of 21 million attainable cubic

feet is projected." The comments are not consistent with the testimony.

- b. Second, complete closure of the facilities infrastructure generates the best economic return to Department of Defense. Since Army recommends leaving the ammunition mission, School of Engineering and Logistics, and Rubber Products Facility open at Red River and since the operation will require base operations support and power station maintenance, how does just changing the command to Lone Star Army Ammunition Plant reduce the infrastructure costs for Department of Defense?

DLA Response: Not applicable to DLA.

Community Response: DLA would still need to provide receiving, storage and shipping support, including a refrigerated warehouse to the rubber products operation.

3. Was the combined military value and cost of closure of the co-located facilities of Red River Army Depot, Lone Star Army Ammunition Plant, DLA Distribution Depot Red River (DDRT) and their tenants considered in the overall evaluation as requested of the Army, DLA, and Department of Defense by the community?

DLA Response: Defense Distribution Depot Red River is closing because the Army recommended closure of the Red River Army Depot. DLA has a commitment to the Services to provide rapid response distribution assistance by maintaining a distribution presence wherever they have a maintenance depot or major fleet support activity. The consideration of tenants is a host responsibility and DLA cannot comment on the Army's evaluation process.

Community Response: The DLA analysis was conducted after the Army made the decision to close Red River. The chart shown at Tab E reflects the proposed scenario briefed to the Secretary of the Army, January 26, 1995. It totally ignores DDRT except in a reference to Other Service/DOD Factors. That scenario was approved. The Army made its decision without knowledge of costs associated with movement of DDRT and without making provisions for base operations support or support required from the Regional Defense Reutilization and Marketing Office and the U.S. Health Clinic. Tab F shows the total elimination of those tenant activities.

DLA did not respond to the question related to consideration of combined military value.

MEMORANDUM FOR THE RECORD

SUBJECT: Briefing for the Secretary of the Army, January 26, 1995, 1000-1100 hours

1. The purpose was to: (a) obtain a decision on the Army's BRAC recommendations; and (b) provide information on the financial implications of various options, an update on the Joint Cross Service Groups, information on options to vacate leases in the National Capital Region and information on upcoming milestones.
2. Principal attendees: Mr. West, GEN Sullivan (Chief of Staff), Mr. Reeder (Undersecretary), GEN Tilelli (Vice Chief of Staff), Mr. Walker (Assistant Secretary for Installations, Logistics & Environment), Mr. Coleman (General Counsel), LTG Dominy (Director of the Army Staff), Mr. Stockdale (Deputy General Counsel), and COL Jones (Director, TABS). BG Shane (Director of Management) gave the briefing.
3. After obtaining consensus, Secretary West approved the closure or realignment of the following 42 installations and sites. The recommendation to close Ft McClellan was made with the expressed condition of getting the requisite environmental permits.

Capacity Utilization Definitions

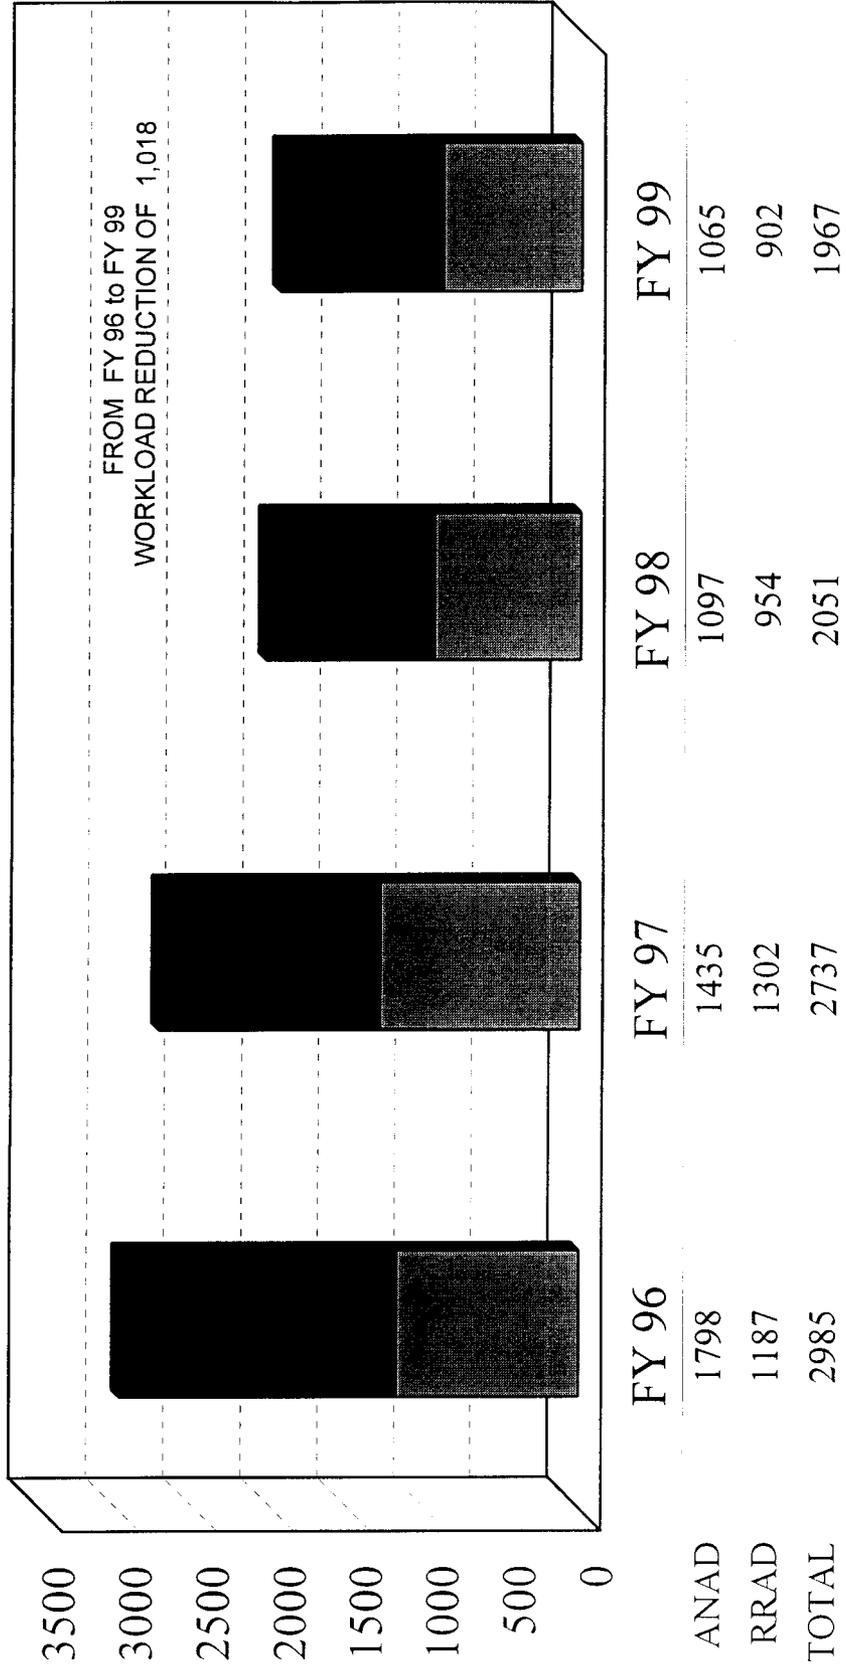

- Workload -- the amount of workload in direct labor hours anticipated for the depot in a given fiscal year
- Capacity Index -- the amount of workload in direct labor hours that the depot can effectively produce annually on a single shift, 40-hour week basis
- Utilization Index -- a computation of dividing workload by the capacity index
- Note -- Capacity is based on present product mix at each depot, any changes in product mix will impact the capacity index.
 - For example electronic capacity \neq track vehicle capacity

Red River Army Depot, TX

1. Recommendation: Close Red River Army Depot. Transfer the ammunition storage mission, intern training center, and civilian training education to Lone Star Army Ammunition Plant. Transfer the light combat vehicle maintenance mission to Anniston Army Depot. Transfer the Rubber Production Facility to Lone Star.

2. Justification: Red River Army Depot is one of the Army's five maintenance depots and one of three ground vehicle maintenance depots. Over time, each of the ground maintenance depots has become increasingly specialized. Anniston performs heavy combat vehicle maintenance and repair. Red River performs similar work on infantry fighting vehicles. Letterkenny Army Depot is responsible for towed and self-propelled artillery as well as DoD tactical missile repair. Like a number of other Army depots, Red River receives, stores, and ships all types of ammunition items. A review of long range operational requirements supports a reduction of Army depots, specifically the consolidation of ground combat workload at a single depot.

The ground maintenance capacity of the three depots currently exceeds programmed work requirements by the equivalent of one to two depots. Without considerable and costly modifications, Red River cannot assume the heavy combat vehicle mission from Anniston. Red River can not assume the DoD Tactical Missile Consolidation program from Letterkenny without major construction. Available maintenance capacity at Anniston and Tobyhanna makes the realignment of Red River into Anniston the most logical in terms of military value and cost effectiveness. Closure of Red River is consistent with the recommendations of the Joint Cross-Service Group for Depot Maintenance.

3. Return on Investment: The total one-time cost to implement this recommendation is \$60 million. The net of all costs and savings during the implementation period is a savings of \$313 million. Annual recurring savings after implementation are \$123 million with an immediate return on investment. The net present value of the costs and savings over 20 years is a savings of \$1,497 million.

4. Impacts: Assuming no economic recovery, this recommendation could result in a maximum potential reduction of 5,654 jobs (2,901 direct jobs and 2,753 indirect jobs) over the 1996-to-2001 period in the Texarkana, TX-Texarkana, AR Metropolitan Statistical Area, which represents 9.5 percent of the area's employment.

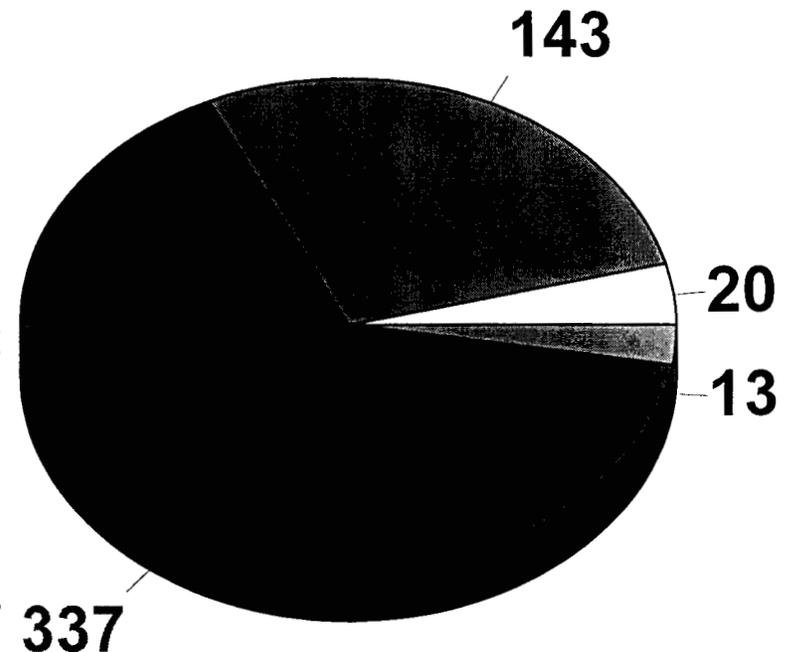

The cumulative economic impact of all BRAC 95 recommendations and all prior-round BRAC actions in this area over the 1994-to-2001 period could result in a maximum potential decrease equal to -7.7 percent of employment in the area. There are no known environmental impediments at the closing or receiving installations.

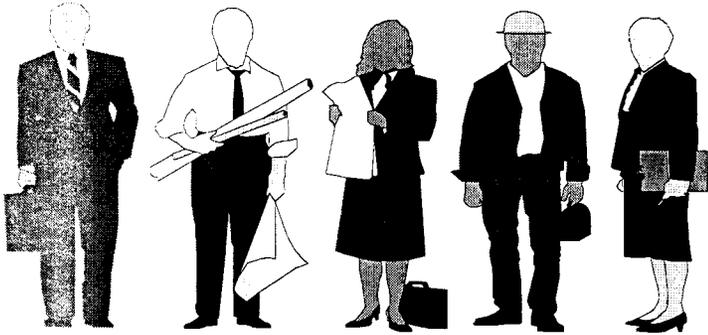

RED RIVER ARMY DEPOT

TRUE SAVINGS

- FY96 - 513 Base Personnel on TDA
 - ▶ 20 - Base Operations Personnel supporting other Non-Army Tenants
 - ▶ 143 - Base Operations Personnel to be transferred to Lone Star Army Ammunition Plant

COBRA COMPARISON
DLA/DDRT Model For DDRT

COBRA Summary:	DLA	DDRT
ROI	2002 (2 yrs)	2022 (22 yrs)
NPV in 2015 (\$K)	-186,147	67,930
1-Time Costs (\$K)	58,893	338,253

Scenarios: DLA: Close Red River. Move all workload associated with maintenance to DDAA. Move remaining workload as follows: active stock and associated personnel to DDJC, move remaining workload to Base X. No personnel transfers to Base X. Region personnel assigned to DDRW. Return to DDRW HQ in Stockton.

DDRT: Disestablish DDRT. Move all vehicles and associated stock to DDAA. Move all remaining stock to DDJC. Move 100% of stock. Personnel moves unchanged from DLA model.

1. Mileage Corrections:	DLA	DDRT
DDRT to DDSP	1188	1205
DDRT to DDJC	1188	1799
DDRWRT to DDRW	1188	1799
2. Mission Equipment:	9,881 Tons	19,384 Tons from BRAC Data
Supply Equipment	0 Tons	378 Tons
Military Light Veh	0	20
Heavy/Spec Veh	0	519

3. Personnel changes and costs/savings were not changed except mileage correction for DDRWRT to DDRW changed moving costs slightly.

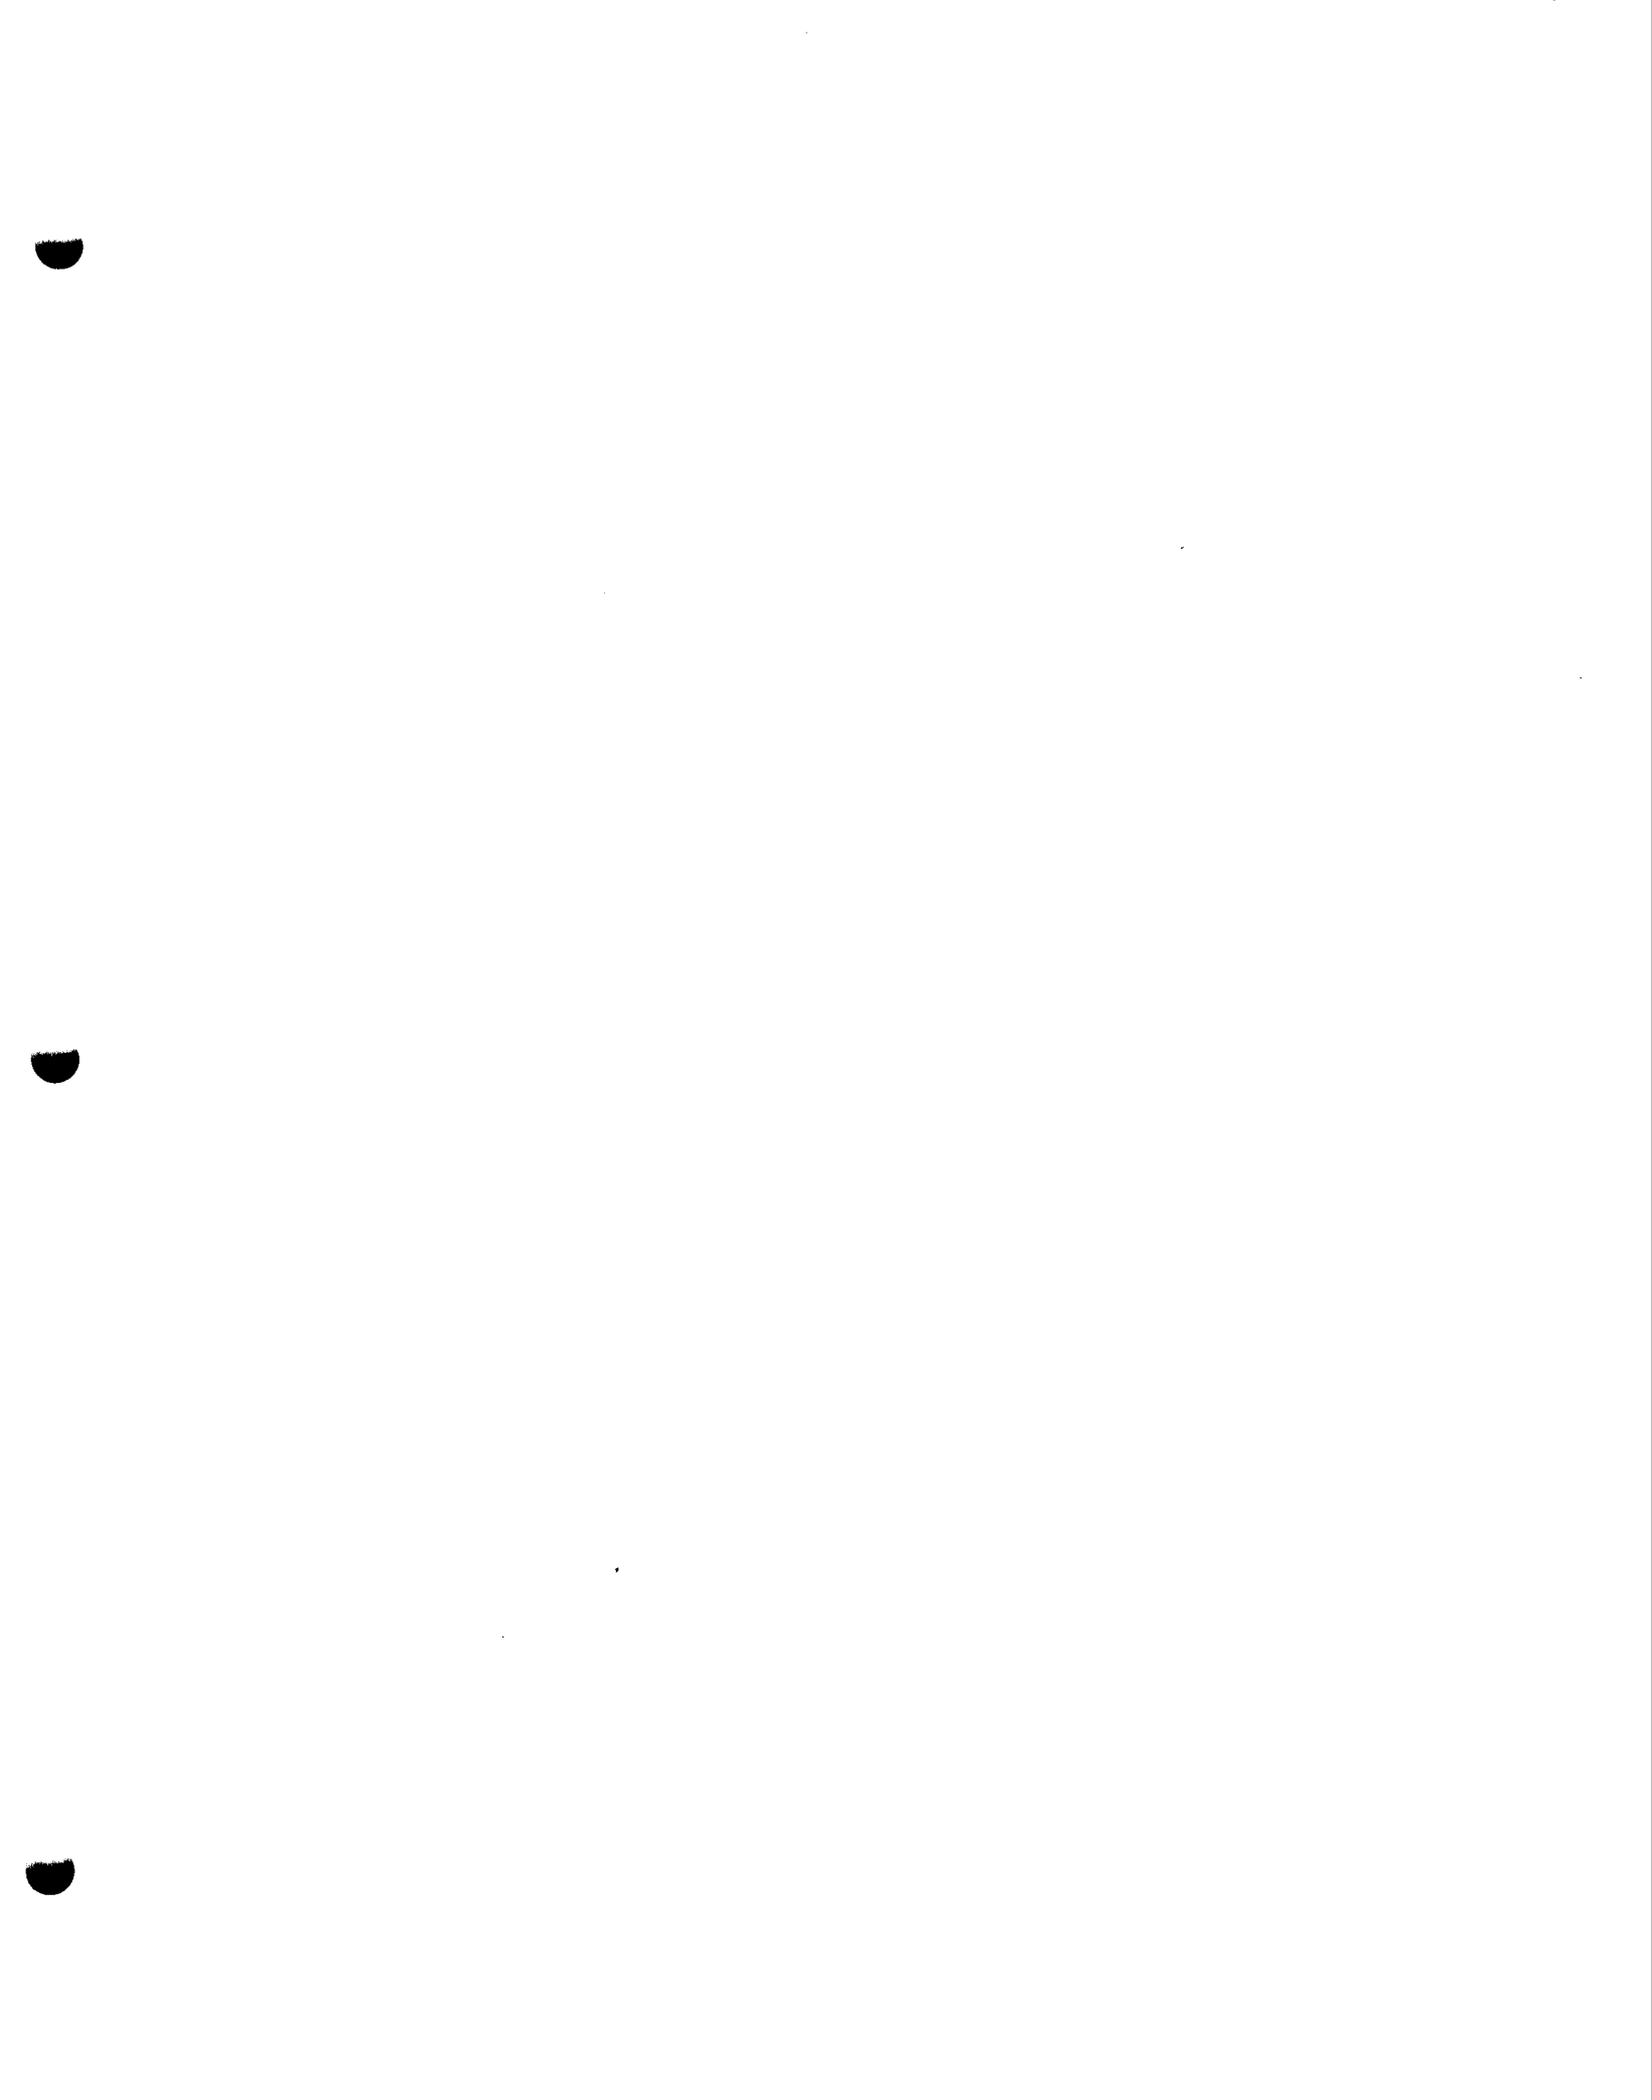

4. 1-Time Unique and Moving Costs:	DLA	DDRT
Unique Costs	\$10,089,000	\$225,261,169
Unique Moving	\$ 8,390,000	\$ 37,952,181

Explanations: DLA figures are take directly from COBRA. No explanation of the source of these figures is given.

DDRT: (A more detailed analysis of the following figures is attached.)
13,740 vehicles to DDAA. Preparation to ship cost: \$33,614,882.
Transportation: \$19,905,270. Labor at DDAA to unload and store: \$9,552,325.

DDRT has 120,735 Tons of Mission Stock, excluding Vehicles;
7.4% is vehicle support stock (8,934 Tons to DDAA).
92.6% is other stock (111,801 Tons to DDJC).

	Prep for Ship	Transportation
Mission Stock to DDAA:	\$ 14,181,206	\$ 478,182
Mission Stock to DDJC:	\$177,465,081	\$ 17,568,729

Opening Testimony for DLA BRAC 95

Good afternoon. My name is Major General Lawrence P. Farrell and I am the Principal Deputy Director for the Defense Logistics Agency at Cameron Station in Alexandria, Virginia. I also served as the Chairman for the DLA BRAC Executive Group for the complete duration of this round of the base closure and realignment process.

I would like to first refresh you on DLA's mission, then walk you through DLA's BRAC 95 approach, outline our recommendations, and finally present you with an overall summary of DLA's actions.

DLA is a combat support agency providing worldwide logistics support and related services throughout the Department of Defense in the areas of contract management, distribution management, and inventory management. The Agency's goal is to be the provider of choice, around the clock, around the world, providing logistics readiness at reduced cost thus enabling weapon systems acquisition at reduced cost. To that end, we have implemented many innovative business practices, such as direct vendor delivery, business process engineering, electronic commerce/electronic data interchange which will reduce lead-time and the cost of our services to our customers.

The DLA approach to BRAC 95 was consistent with the Public Law, the Force Structure Plan, the DoD Selection Criteria and OSD policy guidance. Our step-by-step process outlined on this chart lead us to make recommendations which are fully consistent with our DLA Strategic Plan, our Concepts of Operations for our major business areas, and the Force Structure Plan. Military judgment was exercised at each step in the process.

Through the force structure drawdown and DLA's initiatives, including optimizing storage space, shifting workload to the private sector, and incentivizing the customer to buy smarter, DLA projects that storage capacity requirements will be reduced by 43 percent by the year 2001. A 52 percent reduction in workload due to reduced inventory requirements and a 55 percent reduction in personnel who support that workload are projected.

Storage capacity or cube is the constraint within DLA relative to how much we can close. We must size our distribution system to meet our customers' requirements. At the end of FY 94, DLA had 618 million attainable cubic feet of storage space while our requirement is at 519 million attainable cubic feet. Our Storage Management Plan which identifies increases to storage requirements such as Army stocks currently stored at Sennaca and Sierra Depots, which are closing in BRAC 95, European returns and decreases resulting from Service and DLA Inventory Reductions place our requirement for the year 2001. DLA closures in BRAC 95 reduce storage capacity by 114 million attainable cubic feet resulting in capacity of 431 million attainable cubic feet. A shortfall of 21 million attainable cubic feet is projected. As indicated earlier, DLA plans to use cross Service transfers, if necessary, at collocated depot locations to make up any deficit in storage capacity.

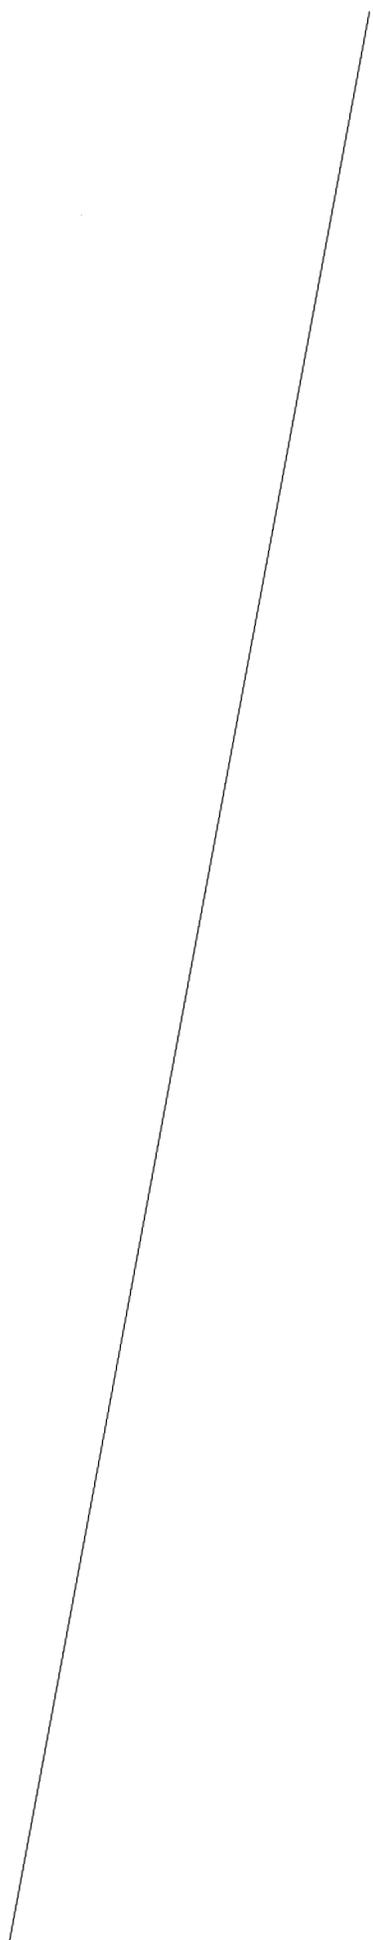

Throughput capacity is not a constraint. DLA measures its throughput by bin, bulk open storage, and bulk covered storage. Even after implementation of our BRAC 95 recommendations, DLA will still have excess throughput capacity.

The Army recommended closure of two of its maintenance depots at Letterkenny, Pennsylvania and Red River, Texas. Following our Concept of Operations, DLA made the decision that closure of the maintenance activities at these locations eliminated the need for a DLA presence there. Since the Agency did not need the storage capacity, the Agency recommended the closure of the DLA Distribution Depots at Letterkenny and Red River.

Questions and Answers

Chart 4

Question: You talk three vehicle maintenance depots. I thought Letterkenny was a missile depot.

Answer: They have been designated as a missile depot but they also support maintenance of the Howitzer Family of Vehicles

Question: How do you know the workload will support 1.75 depots?

Answer: That computation was made using FY99 funded workload as identified in the Defense Business Plan. That workload divided by the total capacity of the three depots equals 1.75. (See your backup chart for Chart 4.)

Questions and Answers

Chart 5

Question: What specific concepts are you referring to?

Answer: Readiness, Sustainability and Total Life Cycle support are the reasons for organic depots. Accomplishing core workload requirements in public depots and non-core workload in the private sector. Design, develop, manufacture and install major modifications and upgrades in the private sector.

Question: What is core workload?

Answer: The weapon systems required to fight a war as defined by DoD

Question: What do you mean by partner with industry?

Answer: Sharing facilities, equipment, and technology. In other words, industry could use some of the excess depot capacity. This would increase readiness & share the overhead burden.

Question: How do you know that Red River and Anniston have existing capability and capacity?

Answer: The community reviewed the DoD Tactical Missile Maintenance Consolidation Plan and made that determination. In fact these missiles were maintained by the depots. At Red River, the Raytheon Operation was closed, making missile facilities available. Also, at Red River, the Chaparral System is being phased out and those facilities are available.

Questions and Answers

Chart 6

Question: How does the taxpayer win?

Answer:

- Avoids the cost of closure
- Utilizes existing facilities
- Avoids unnecessary construction
- Avoids Transportation costs between government activities and private industry
- Shares overhead expense

Questions and Answers

Chart 2

- **Why do you consider the results flawed?** Army and DLA conducted independent BRAC analysis. There was no DoD consolidated military value assessment or cost analysis which my following charts will show.
- **When did the community make this request and to whom?** 5 Jan 95, in the Pentagon to Under Secretary of Army Joe Reeder, Under Secretary of Defense Robert Bayer, and Army TABS Team Leader BG Jim Shane.
- **How do you know it did not happen?** There were no COBRA runs at the DoD level and the Army COBRA does not contain any data relative to DLA or other tenants.

Questions and Answers

Chart 3

- **What non-BRAC savings were included?** Personnel reductions attributed to normal workload reductions. These would have occurred - will occur - without BRAC. Inclusion of the savings as BRAC savings is intentionally a misrepresentation to the public.
- **What is included in the DLA relocation costs?** \$273M for relocation of active mission related stock and the relocation of people and equipment to the gaining installations.
- **Where did you get the MIL-CON requirement?** \$19M hardstand for storage of vehicles (DLA Cobra) 15M maintenance facilities to accommodate the receipt of the tracked vehicle workload which was included in the Joint Cross Service Group Study but omitted from the Army Cobra.
- **Explain supply/storage for Rubber Products.** The rubber products mission is not independent. It requires refrigerated storage of raw rubber, receipt and issue of unserviceable assets, preservation and packaging after rework, storage, and distribution to the customer. These services and the facilities are provided by DLA.
- **What do you mean by tenant support of enclaved operations?** Currently, medical services and property disposal are provided by tenants to both Lone Star Army Ammunition and Red River. However, both of these tenants are slated for elimination but the requirement still exists. Also, the Test Measurement Diagnostic Equipment Center provided calibration of the ammunition gages. Ammo is staying.
- **Why do you indicate that Non-appropriated Fund Accounting was not considered?** Review of the Army analysis indicates that every tenant on the installation was addressed with the exception of NAF. They occupy five buildings and employ 191 personnel and if they remain on the Red River installation will require support from base operations.

Questions and Answers

Chart 4

- **How do you know DLA's decision was based on the Army's decision and not a military value and economic analysis?** Major General Farrell's testimony before the commission specifically stated that.
- **What do you mean - not based on cost saving?** That is what they said

Questions and Answers

Chart 5

- **How do you explain the difference in recurring savings?** The Army claimed non-BRAC savings based on normal workload reductions - we did not. Essentially the only true savings are base operations reductions. The maintenance work still has to be done be it at Anniston or Red River.
- **How do you explain the difference in the one time costs?** Army did not included the cost of the DLA relocation or the MIL-CON requirements that we previously addressed. We did.
- **How did you calculate the return on investment years?** Simply by dividing the one time cost by the annual net savings.

Questions and Answers

Chart 6

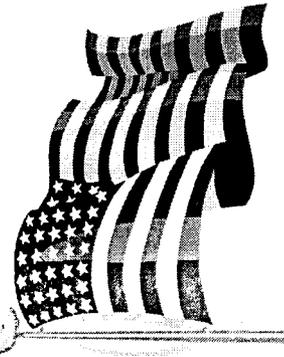

- **How does profitability relate to Net Operating Result?** Profitability is the Net Operating Result. It is expressed as the difference in the revenue received from customers for products produced less the expenses incurred during the production process.

Questions and Answers

Chart 7

- **What does this show us?** It clearly shows that Red River is the most efficient depot in the Army Depot System over a five year period. And I might mention that Red River is the only depot that has had positive profitability each of those years.

Return on Investment

	Army (\$M)	RRAD Complex (\$M)	Community Estimate Army Maint* (\$M)
Recurring Savings	\$129.0	\$13.1	\$9.2
Recurring Cost	<u>\$5.8</u>	<u>\$5.8</u>	<u>\$5.8</u>
Annual Net Savings	\$123.2	\$7.3	\$3.4
One Time Cost	\$59.6	\$412.6	\$145.7
Return on Investment	Immediate	57 years	43 years

*Assumes DLA remains at Red River

Chart 5 - Return on Investment

As a result of the flaws I have just addressed, I take issue with the Army's calculation on return on investment. The Army says they will receive an immediate return on investment. This is simply not the case. Using DoD data we estimate that the return on investment will be 57 years, four years longer than this fine installation has been in existence. What a travesty if we let this happen. It simply does not make sense!

Let me give you a little more detail on the computations. When you take out the savings claimed by the Army that are the result of Force Structure changes not BRAC, the only real savings that would accrue are base operations or overhead personnel. This is 337 personnel or \$13.1 million per year. The Army falsely assumed that the direct labor manhours performing the mission could be eliminated but the manhours will be needed by Anniston. The community used the Army's estimate for recurring cost which includes the base operations personnel required to support the remaining operations enclaved to Lone Star Army Ammunition Plant. The annual net savings is \$7.3 million. We believe the one-time cost is understated by \$319 million for relocation of DLA stocks, associated personnel costs, and equipment relocation, and \$34 million of construction required at Anniston. When the one time cost is divided by the annual net savings, the results of return on investment is 57 years.

If you look at the column on the right, we have also computed the return on investment assuming the DLA mission remains at Red River and only the Army Maintenance mission is moved to Anniston. The recurring savings is based on elimination of 237 base operations or overhead personnel for \$9.2 million per year. Again, the direct labor manhours performing the mission at Red River will be needed at Anniston. The Army falsely assumed they would not be needed and claimed them as BRAC savings. The one-time cost is understated by \$34 million for additional construction required at Anniston and \$52.1 million for relocation of the core tracked vehicles and associated repair parts. This gives a return on investment of 43 years. In all cases, the Army failed to include the cost of transfer of the core tracked vehicles and associated repair parts.

Simply stated the economics do not support relocation of either the DLA distribution mission or the Army maintenance mission. We believe DoD substantially deviated from the Final Selection Criteria Number 5 - Return on Investment.

RELOCATION COSTS — RED RIVER TO ANNISTON

The Honorable Alan J. Dixon, Chairman
The Defense Base Closure and Realignment Commission
1700 North Moore Street, Suite 1425
Arlington, VA 22209

Dear Mr. Chairman:

Thank you for traveling to Northeast Texas last week to visit Red River Army Depot (RRAD) and the Defense Logistics Agency's Distribution Depot Red River (DDRT). It was an honor to present the community's concerns about the Defense Department's closure recommendations.

I am also grateful to you for submitting my questions for the record to the Department of the Army and the Defense Logistics Agency. Please find enclosed a series of follow-up questions that seek to gain greater knowledge of the Army's depot evaluation procedures. I would very much appreciate it if you would submit these questions to the Defense Department and the Army with the request for a response in the customary five working day time-frame.

I thank you in advance for your attention to this matter, and I look forward to the Commission's regional hearing in Dallas next week.

Sincerely,

Jim Chapman
Member of Congress

Enclosures

Questions for the Army submitted by Congressman Jim Chapman

QUESTION 1

The Army has stated that it did not base its BRAC recommendations on savings realized from workload reductions resulting from downsizing. The Army's analysis shows the elimination of 1847 personnel at Red River and the realignment of only 375 personnel to Anniston, yielding a net savings of 1472 personnel. Provide a detailed analysis of how the Army could reduce 1472 personnel and include a description of the process improvements that will allow a savings of over 1000 direct labor positions, breakdown of the projected types of personnel included in the 375 proposed for realignment, the projected workload used to make the calculation, and the number of base operations personnel eliminated.

QUESTION 3

Provide the following information, showing costs and personnel estimates used in the Army COBRA analysis, for support provided for remaining operations.

<u>Operation</u>	<u>Support Required</u>
Missile Recertification Office	Base Operations U.S. Army Health Clinic District Test Measurement and Diagnostic Equipment Center (TMDE) Navy, Defense Printing Service Regional Defense Reutilization & Marketing Office (DRMO)
Consolidated Non-Appropriated Fund Accounting Office	Computer Support Other Base Operations Support U.S. Army Health Clinic
Ammunition Operations	Base Operations U.S. Army Health Clinic TMDE DRMO Navy, Defense Printing Services
Rubber Operations	Base Operations DRMO U.S. Army Health Clinic TMDE
Defense Finance and Accounting Service, Non-Appropriated Payroll Activity	Computer Support

QUESTION 4

The Army, in answering a question related to consideration of combined costs of RRAD, DDRT and LSAAP, stated that it made allowances for the DLA Regional Distribution Center to be part of the enclave supported by LSAAP. Specifically, what provisions were made for base operations support, medical support, DRMO Marketing Office support? What were the cost and personnel estimates for this support? Also, what costs were included for the movement of core tracked vehicles and associated repair parts from RRAD to ANAD? Were these estimates included in the COBRA analysis?

QUESTION 5

On January 5, 1995, the community specifically requested that the Army and DoD evaluate RRAD, DDRT, LSAAP, and tenants as a single military complex. Subsequently, the Army made its analysis independent of costs associated with "disestablishment" of DDRT. DLA made its decision to close DDRT because of the Army's decision to move the depot maintenance mission to Anniston. Did the Secretary of Defense accept the two independent analyses and recommendations or was an analysis made at the DoD level? If such an analysis was made, provide it. If it was not done, why not?

MILITARY BASES

Analysis of DOD's 1995 Process and Recommendations for Closure and Realignment

Chapter 2
BRAC 1995 Savings Are Expected to Be
Substantial, Although Somewhat Imprecise
for Now

COBRA uses authorized personnel positions for analysis; however, we found that the actual number of civilian personnel at a base may be less. To determine the impact of this difference, we completed a sensitivity analysis, assuming that the actual civilian personnel levels were 98 percent of what was authorized (an approximation based on differences in recent fiscal years). The results indicated that one-time costs decreased by \$17 million, with a 6-year net increase in savings of \$27.7 million. This appeared to be caused by (1) reduced moving costs because fewer positions were being realigned and (2) greater overhead savings.

DOD's BRAC policy guidance stipulates that personnel reductions associated with force structure reductions are not to be included in BRAC savings. Other military personnel reductions occurring at bases slated for closure or realignment may be counted as savings to the extent that they represent reductions in salary costs. While such reductions are taken, they may not always result in reductions in authorized end strength. The Navy and the Air Force indicate that they reduce their end strengths to match military personnel reductions resulting from BRAC; the Army, which is claiming savings from such reductions in BRAC 1995, indicates that it does not expect to take commensurate reductions in end strength. We calculate that approximately \$41 million of the Army's annual recurring BRAC savings is related to such personnel reductions. Since these personnel will be reassigned elsewhere rather than taken out of the force structure, they do not represent dollar savings that can be readily allocated outside the personnel accounts.

We also found that DOD components were not always able to identify where activities from closing or realigning bases would relocate. Therefore, to fully capture costs and savings, a generic "base X" was used.² Collectively, the services and DLA included base X in 32 (22 percent) of their BRAC 1995 recommendations, accounting for 12 percent of all personnel realignments and 3 percent of costs. Further, in 15 of these 32 recommendations, more than half of the personnel realignments were to base X. Because base X represents an average cost option, or in the case of the Navy and Air Force a higher than average cost option, the difference between the COBRA cost estimate and the eventual implementation cost could be more or less for these recommendations. The components with the greatest number of base-X recommendations were the Army and DLA. Army and DLA officials indicated that prior BRAC experience has shown that

²For anticipated relocations of less than 50 miles, a generic "base Y" was used. Relocations to base Y, as for actual relocations less than 50 miles, do not include personnel moving costs.

MISSILE SUPPORT

POINT PAPER

SUBJECT: Cost to Relocate Missile Recertification Office from RRAD

1. PURPOSE. To provide information on the relocation of Missile Recertification Office.

2. FACTS.

a. PATRIOT Equipment - Disassembly, package, transportation, installation, verification of test equipment, tools, fixtures, office equipment, and spares. \$3,400,000. BASED UPON MICOM PROJECTION.

b. HAWK Equipment - Same as above. Estimated cost \$2,000,000. Based on relocating a FMS Customer.

c. HAWK and PATRIOT Training - Train new workforce (90%). Training cost includes salaries - \$5,700,000. *standard*

d. Missile Readiness - Processing cost over and above currently programmed cost. Work to be performed at OCONUS locations until new facilities and training are completed:

(1) PATRIOT:

Transportation	\$6,362,422	
Missile Processing	<u>5,703,130</u>	(NAMSA)
TOTAL	\$12,065,552	

(2) HAWK: \$6,000,000 Based on WAG.

e. New Construction - Worst case estimates, 70,000 square feet to meet recertification processing and inert storage requirements. Costs are based on estimates provided for Depot Tiering Concept - \$12,720,000.

f. Explosive Storage - 253 new standard igloos required to store HAWK and PATRIOT (253 x 400K = \$101M).

g. Missile Movement - Cost to relocate storage of missiles from RRAD to LEAD.

HAWK	\$ 1.531M
PATRIOT	<u>964k</u>
TOTAL	\$2.495M

h. Total estimated cost to relocate MRO and become fully operational:

Relocate Equipment	\$ 5,400,000
Training	5,700,000
Msl Readiness	18,065,552
New Construction	12,720,000
Explosive Storage	101,000,000
Missile Movement	<u>2,495,000</u>
TOTAL	\$145,380,552
