BRAC Commission

2005

Received

Dear Chairman Principi,

I am writing to urge the BRAC to remove the Armed Forces Institute of Pathology (AFIP) from the list of military facilities slated for closure. The AFIP is an irreplaceable resource for disease research and patient care. This exceptional institution not only provides outstanding service to our nation's military community, but also contributes significant knowledge and education to the broader medical field's understanding of human disease.

The AFIP tissue repository is a valuable national treasure that must remain accessible to researchers and experts in laboratory medicine. The AFIP's collection of specimens has helped medical professionals understand, develop vaccines and treatments for, and sometimes cure, often-fatal diseases. Access to both archived material as well as newly acquired specimens must be preserved.

Each year the AFIP issues hundreds of thousands of hours in continuing medical education to a diverse group of medical professionals that specialize in pathology, forensics, radiology, emerging infectious disease, renal disease, ophthalmology, and urology. In fact, over 7,400 medical and other health professionals alone were educated and trained in 2004 through a variety of AFIP-sponsored venues including live courses, seminars and Internet courses.

The AFIP's leadership in the area of education and training advances the knowledge base and ensures the competence of thousands of medical professionals. It would be a major loss to both military and civilian medicine, especially at this time, if AFIP's consultative services were discontinued.

Should the AFIP be forced to close, our nation would lose a valuable resource that plays a key role in the advancement of medicine and contributes knowledge to improve the health of our nation's citizens. First, I respectfully request, that the BRAC eliminate its recommendation to dismantle the AFIP. Second, I urge the BRAC to ensure that the integrity of the tissue repository is preserved.

Thank you for your kind consideration.

Sincerely,

Joanna Haley MLT/ASCP

Dear Chairman Principi,

I am writing to urge the BRAC to remove the Armed Forces Institute of Pathology (AFIP) from the list of military facilities slated for closure. The AFIP is an irreplaceable resource for disease research and patient care. This exceptional institution not only provides outstanding service to our nation's military community, but also contributes significant knowledge and education to the broader medical field's understanding of human disease.

Pathologists in the Veterans Affairs Medical Centers are heavily dependant on the consultative services provided by the AFIP through mutual agreements. In addition the AFIP provides quality assurance activities through its SERS program. All VA pathologists benefit from the continuing education services of the quarterly unknown slide program which grants credit hours for the activity at no cost to the individual pathologist. This translates into better care for our veteran patients.

The AFIP tissue repository is a valuable national treasure that must remain accessible to researchers and experts in laboratory medicine. The AFIP's collection of specimens has helped medical professionals understand, develop vaccines and treatments for, and sometimes cure, often-fatal diseases. Access to both archived material as well as newly acquired specimens must be preserved.

Each year the AFIP issues hundreds of thousands of hours in continuing medical education to a diverse group of medical professionals that specialize in pathology, forensics, radiology, emerging infectious disease, renal disease, ophthalmology, and urology. **Dear Mr. President, and Chairman Principi,**

**In 1961, I was privileged to be assigned to The Department of Pathology Of Walter Reed Army Medical Center as the Chief of Anatomical Pathology, under The Chief Pathologist Colonel Nelson Irey. The Department of Pathology was housed in the building otherwise fully occupied by the Armed Forces Institute of Pathology. The Pathologists and other members of that Institute were at that time, and are now recognized as the top men and women in their field of expertise, not only in the USA, but in the world. The names of those Department Heads will ring down through the next few centuries as the great contributors to the science of Pathology, on a world wide scale. Their presence, a short walk down the hall from the Pathologists of that major US Army Hospital, contributed immensely to the excellent service the Water Reed Hospital Pathology Department supplied to the physicians providing the best medical care in the world to men and women of the Armed Services of the United States Of America, including many of it's Commanders in Chief, the several Presidents of the USA.**

**Younger associates in the various branches of Pathology, in the AFIP, have often moved on to accept appointments as the head of Pathology Departments of prestigious University Medical Schools, Cancer Hospitals and prestigious private medical centers, in the USA and around the world. This Organization is not just a military base. It is one of the finest contributors of this nation to the health and well being of the citizens of the USA and to the rest of the world. There is no organization which can match the collective medical wisdom and experience of the dedicated health care experts housed in this organization. To even think of disbanding it is unthinkable folly, in my opinion.**

**I am writing to urge the BRAC to remove the Armed Forces Institute of Pathology (AFIP) from the list of military facilities slated for closure. The AFIP is an irreplaceable resource for disease research and patient care. This exceptional institution not only provides outstanding service to our nation's military community, but also contributes significant knowledge and education to the broader medical field's understanding of human disease.**

**The AFIP tissue repository is a valuable national treasure that must remain accessible to researchers and experts in laboratory medicine. The AFIP's collection of specimens has helped medical professionals understand, develop vaccines and treatments for, and sometimes cure, often-fatal diseases. Access to both archived material as well as newly acquired specimens must be preserved.**
