MEMORANDUM FOR RECORD

SUBJECT: Installations' Total Square Footage Used for Military Value/Scenario Analysis

1. This memorandum addresses the methodology used by the Installation Management Team to determine the total square footage of facilities owned by an installation. Both Capacity Data Call (CDC) Question 445 and Military Value (MV) Question 1979 requested the total square footage of the facilities belonging to each installation. In theory, an installation would give the same answer for both questions. However, the majority of installations gave different responses to the two questions. As a rule, if an installation's answer to both questions were close, the IM team used the data from MV Question 1979. In the situations where an installation did not answer the MV question, but answered CDC Question 445, the IM Team used the data from the CDC question. If a large discrepancy existed between an installation's answers to both questions, the IM Team used the answer closest to the installation's data listed in the DoD Infrastructure Guide.
2. Since the MV questions were the most recent questions to come back from the field, the team believed that the data from the MV questions should represent the most current information. For this reason, the data from the MV question was given preference.
