

# BRAC SRG #10

## 24 August 2004

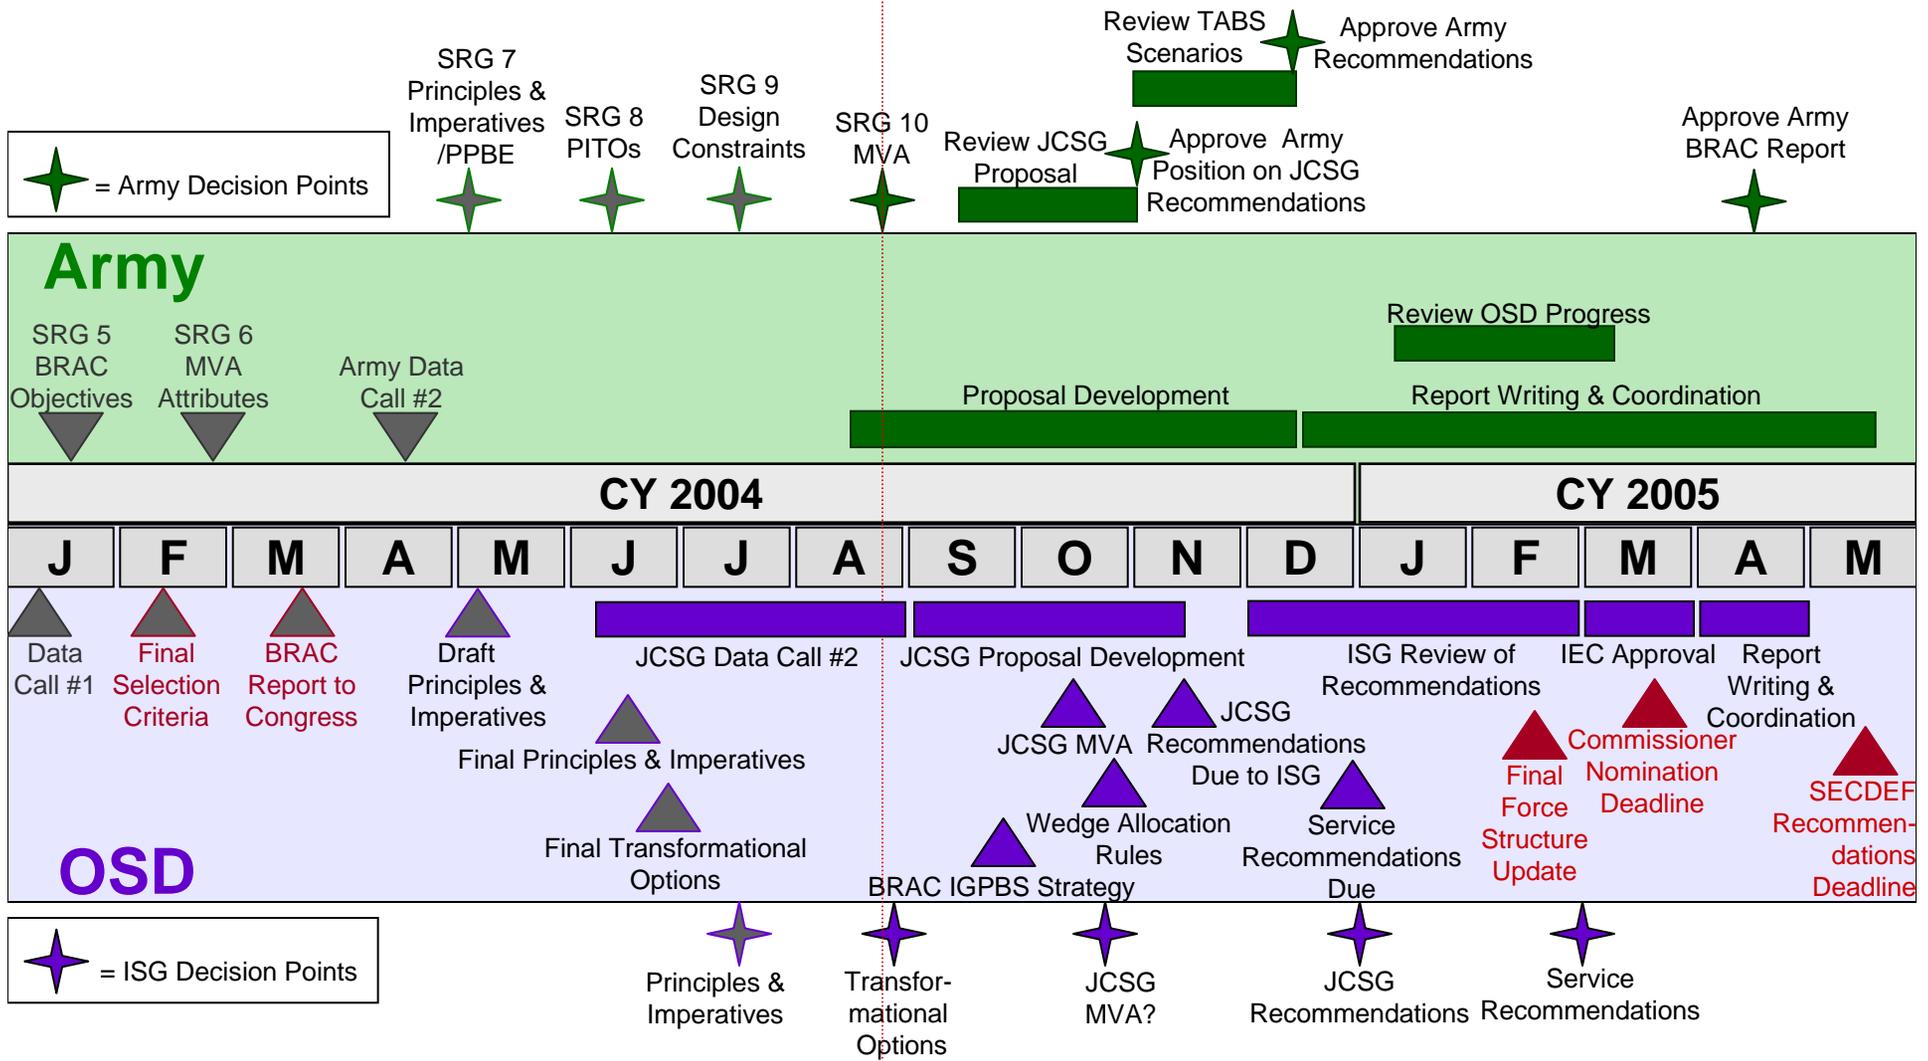

# Purpose & Agenda

- Present for approval: Recommendation changing Army Imperatives to Considerations
- Present for information:
  - Timeline Update
  - Initial results of Army Military Value analysis
- Recommendations
- Way Ahead

# BRAC Timeline

*Transforming Through Base Realignment and Closure*

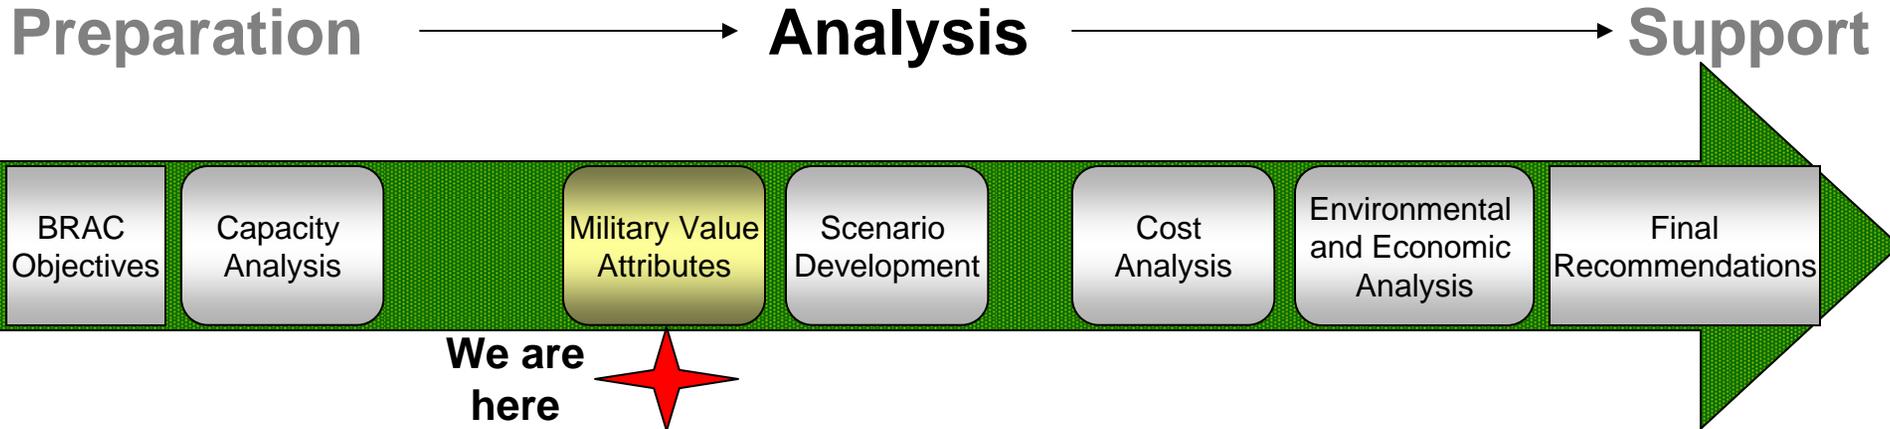

# Imperatives vs. Considerations

- DOD Imperatives
  - Initially envisioned as absolutes
    - However, DOD may override one or more Imperatives when they conflict with Military Value or military judgment
    - An override could be interpreted as failure to comply with BRAC policy
  - ISG determined that Imperatives should be treated as “Considerations”, not absolutes in the BRAC analysis
- **What should Army do with its Imperatives?**
  - Same concerns as ISG: Army may wish to supercede Imperatives when they conflict with Military Value or military judgment.
  - Recommendation: Army regard Imperatives as Considerations and treat them in a similar fashion

# BRAC Analytical Process

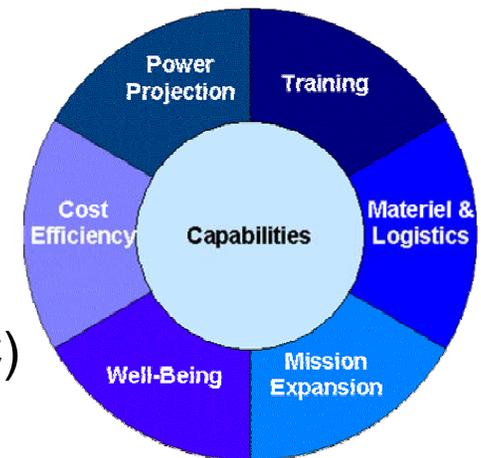

“...military judgment built upon a quantitative analytical foundation is the most appropriate way to ensure that military value is the primary consideration in making closure and realignment recommendations.”

Source: USD (AT&L) Memo to ISG, Subject: Principles and Imperatives, dated 20 April 2004

# Military Value

- Process
  - Complies with BRAC Law
  - Grounded in Senior Leader interviews and other research
- Model
  - 6 Capabilities and 40 Attributes
- Quality Control
  - Experienced Team (TABS, West Point, CAA, and SMEs)
  - Comparison with past Army BRAC analyses
  - 11 Supporting Analyses (e.g., G6, SDDC, AEC)
  - Sensitivity Analyses

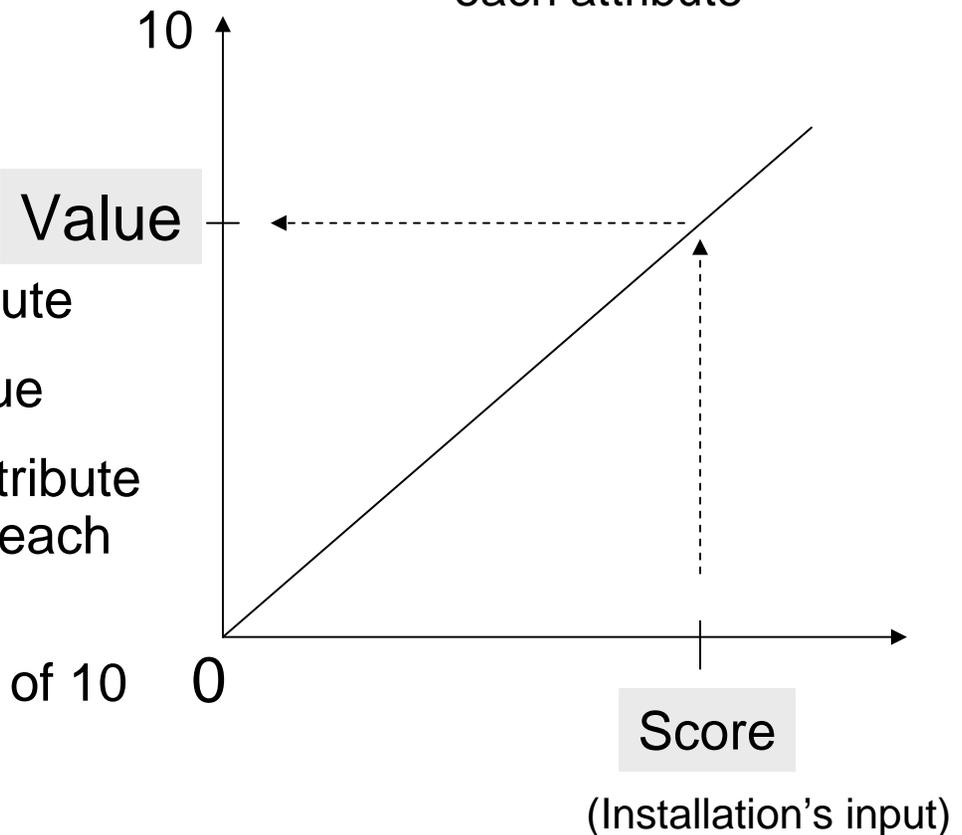

# Military Value Calculation

- Process steps include
  - Select Attribute<sub>i</sub> (A<sub>i</sub>)
  - Select Weight<sub>i</sub> (w<sub>i</sub>)
- To calculate MV
  - Find the score for an attribute
  - Convert the score to a value
  - Sum the weight of each attribute multiplied by the value for each attribute
  - $MV_i = \sum_i w_i V(A_i)$ , max MV of 10

One Value Function for each attribute

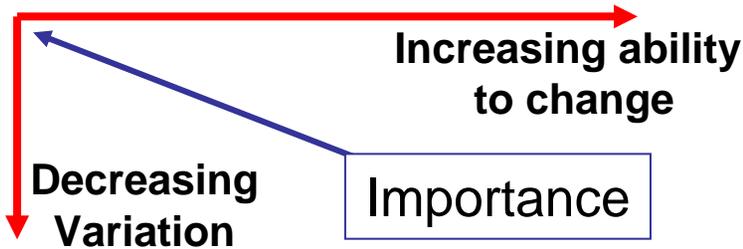

# Weighting ( $W_i$ )

- Attribute weighting based on:
  - The Army's ability to change the attribute given future unknown requirements
  - The variation of the data – the attribute's ability to help distinguish installations
  - Military judgment (the level of importance)

# Model Weighting – Applied to Attributes

|      |        |     |

*Transforming Through Base Realignment and Closure*

# Attribute Relative Importance

| High Level               |                                       |
|--------------------------|---------------------------------------|
| Heavy Maneuver Area      | Int-Svc / Partnering Workload         |
| Direct Fire Capability   | Joint Facilities <b>(MED)</b>         |
| Indirect Fire Capability | Inst. Unit Cost Factor <b>(MED)</b>   |
| Light Maneuver Area      | Brigade Capacity                      |
| Force Deployment         | Environmental Elasticity <b>(MED)</b> |
| Materiel Deployment      | Critical Infrastructure Proximity     |
| Buildable Acres          | Accessibility <b>(MED)</b>            |
| Airspace                 | RDTE Mission Diversity <b>(MED)</b>   |
| Test Ranges              |                                       |

# Attribute Relative Importance

| Medium Level                           |                                    |
|--|------------------------------------|
| Soil Resiliency                        | Munitions Production Capability    |
| Water Quantity                         | Area Cost Factor <b>(HIGH)</b>     |
| Crime Index                            | Mobilization History <b>(HIGH)</b> |
| <del>Affordability</del>               | Connectivity (IT)                  |
| Housing Availability                   | Air Quality <b>(LOW)</b>           |
| Urban Sprawl                           | Noise Contours <b>(LOW)</b>        |
| Workforce Availability                 | Employment Opportunities           |
| In-State Tuition Policies <b>(LOW)</b> | C2 Target Facilities               |
| Maintenance/Manufacturing              |                                    |

# Attribute Relative Importance

| Low Level                        |
|----------------------------------|
| MOUT*                            |
| Medical Availability             |
| Supply and Storage Capacity      |
| Operations/Admin Facilities      |
| Ammunition Storage Capacity      |
| Applied Instructional Facilities |
| General Instructional Facilities |

# Relative Weighting

| Criteria      | DOD Definition  | Main Points  | 95         | SRG6       | FINAL      |
|---------------|---|--|------------|------------|------------|
| <b>DoD #1</b> | <ul style="list-style-type: none"> <li>• Current and future mission requirements</li> <li>• Impact on operational readiness, joint war fighting, and training</li> </ul>  | <ul style="list-style-type: none"> <li>• Train the troops for near-term readiness</li> <li>• Well-being as part of near-term readiness</li> </ul>            | <b>45%</b> | <b>29%</b> | <b>29%</b> |
| <b>DoD #2</b> | <ul style="list-style-type: none"> <li>• Availability and condition of land, facilities and airspace</li> <li>• Throughout a diversity of climate and terrain areas</li> <li>• Staging areas for homeland defense missions</li> </ul> | <ul style="list-style-type: none"> <li>• Land, facilities and condition thereof</li> <li>• Well-being from land, facilities and condition thereof</li> </ul> | <b>23%</b> | <b>28%</b> | <b>29%</b> |
| <b>DoD #3</b> | <ul style="list-style-type: none"> <li>• Contingency, mobilization, and future requirements</li> </ul>  | <ul style="list-style-type: none"> <li>• Contingency missions</li> <li>• Mitigate future risk</li> </ul>   | <b>12%</b> | <b>33%</b> | <b>32%</b> |
| <b>DoD #4</b> | <ul style="list-style-type: none"> <li>• Cost of operations and manpower implications</li> </ul>  | <ul style="list-style-type: none"> <li>• Cost of operations</li> <li>• Manpower implications</li> </ul>  | <b>20%</b> | <b>10%</b> | <b>10%</b> |

# General Military Value Insights

- Consistency with G-3's draft Brigade Stationing Plan
  - Current Power Projection Platforms do well
- Large installations do well
  - Proving grounds offer significant military value
  - Single purpose installations score poorly across capabilities
    - Model helps to distinguish between specialized installations
- Buildable acres are available for joint use
- Joint presence is apparent on Army installations
- Other

# Consistency with Draft Brigade Stationing Plan

|    | Installation       | BDE Plan | PPP |
|----|--------------------|----------|-----|
| 1  | Ft Bliss           |          |     |
| 2  | Ft Lewis           |          |     |
| 3  | Ft Hood            |          |     |
| 4  | Yuma PG            |          |     |
| 5  | Ft Bragg           |          |     |
| 6  | Ft Stewart         |          |     |
| 7  | White Sands MR     |          |     |
| 8  | Ft Wainwright      |          |     |
| 9  | Ft Carson          |          |     |
| 10 | Ft Benning         |          |     |
| 12 | Ft Campbell        |          |     |
| 13 | Ft Irwin           |          |     |
| 14 | Ft Riley           |          |     |
| 16 | Ft Drum            |          |     |
| 17 | Ft Polk            |          |     |
| 19 | Schofield Barracks |          |     |
| 20 | Ft Sill            |          |     |
| 22 | Ft AP Hill         |          |     |
| 23 | Ft Dix             |          |     |
| 25 | Ft Mc Coy          |          |     |
| 28 | Ft Richardson      |          |     |
| 31 | Ft Eustis          |          |     |

- The installations in the draft Brigade stationing plan are in the top 28
- All traditional PPP's are in the top 31
- Potential for other Brigade stationing locations in the top 30

# Large Installations Do Well

| Rank | Installation         |
|------|----------------------|
| 1    | Ft Bliss             |
| 2    | Ft Lewis             |
| 3    | Ft Hood              |
| 4    | Yuma PG              |
| 5    | Ft Bragg             |
| 6    | Ft Stewart           |
| 7    | White Sands MR       |
| 8    | Ft Wainwright        |
| 9    | Ft Carson            |
| 10   | Ft Benning           |
| 79   | USAG Selfridge       |
| 80   | Radford AAP          |
| 81   | Ft Buchanan          |
| 82   | Holston AAP          |
| 83   | Louisiana AAP        |
| 84   | Presidio Of Monterey |
| 85   | Ft Shafter           |
| 86   | Umatilla Chem Depot  |
| 87   | Riverbank AAP        |
| 88   | Tripler AMC          |

- Top 10 installations
    - 77% of the Army’s maneuver land
    - 69% of the Army’s buildable acres
    - 2 Proving Grounds
  - Top 20 installations – all Proving Grounds
- 
- Single purpose installations dominate bottom
  - Bottom 60 installations
    - less than 1% of the Army’s maneuver land and impact areas
    - Zero brigade capacity
    - Less than 3% of the Army’s buildable acres

# Specialized Capability

| Overall | LOG | Installation        |
|---------|-----|---------------------|
| 24      | 1   | Anniston AD         |
| 70      | 2   | Corpus Christi ADA  |
| 38      | 3   | Tobyhanna AD        |
| 33      | 4   | Red River AD        |
| 37      | 5   | Picatinny Arsenal   |
| 62      | 6   | Pine Buff Arsenal   |
| 35      | 7   | Letterkenny AD      |
| 27      | 8   | McAlester AAP       |
| 41      | 9   | Crane AD            |
| 36      | 10  | Redstone Arsenal    |
| 65      | 11  | Milan AAP           |
| 72      | 12  | Iowa AAP            |
| 43      | 13  | Ft Leonard Wood     |
| 76      | 14  | Lone Star AAP       |
| 53      | 15  | Rock Island Arsenal |

- “Single” purpose installations can be evaluated within their specialty
- “Less” significant factors provide discrimination between single purpose installations (e.g., inter-service partnership)

# Buildable Acres Available for Joint Use

| Rank | Installation              | Buildable Acres | Less Training |
|------|---------------------------|-----------------|---------------|
| 8    | FORT WAINWRIGHT           | 1,033,126       | 1,683         |
| 7    | WHITE SANDS MISSILE RANGE | 1,009,282       | 1,004,316     |
| 11   | DUGWAY PROVING GROUND     | 410,927         | 400,927       |
| 17   | FORT POLK                 | 106,899         | 7,901         |
| 14   | FORT RILEY                | 57,998          | 3,278         |

- Army has 3.1 Million plus buildable acres
- Top 5 installations have 82% of buildable acres
- 48 installations have > 1000 buildable acres
- Bottom 30 installations have less than 250 buildable acres each
- Four Installations have zero buildable acres (Hamilton, McNair, Myer, Mississippi)

**Bde Garrison footprint ~ 200 acres**

***Significant hedge against future requirements (surge capability)***

# Joint Presence

- Inter-Service and partnering
  - 18 of the installations have established inter-service and partnering relationships
  - Inter-service and partnering is primary among material and logistics installations
- Joint funding and personnel
  - 34 installations have non-Army funding > 5% of Total Obligation Authority (77 > 0)
  - 30 installations have personnel > 5% of all non-Army personnel (78 > 0)

# Other

- Installation location is the primary factor for the Cost Efficiency Capability (e.g. Area Cost Factor)
- The Top 20 score low with accessibility and critical infrastructure
- Environmental factors do not help discriminate amongst installations

# Initial Ranking of Installations (Q1/2)

| First Quartile          |                    | Second Quartile   |                    |
|-------------------------|--------------------|-------------------|--------------------|
| Average: 4.6            |                    | Average: 2.6      |                    |
| Ft Bliss                | Ft Riley           | Hawthorne AD      | Sierra AD          |
| Ft Lewis                | Ft Knox            | McAlester AAP     | Crane AD           |
| Ft Hood                 | Ft Drum            | Ft Richardson     | Tooele AD          |
| Yuma PG                 | Ft Polk            | Ft Jackson        | Ft Belvoir         |
| Ft Bragg                | Aberdeen PG        | Ft Rucker         | Ft Leonard Wood    |
| Ft Stewart / Hunter AAF | Schofield Barracks | Ft Eustis         | Ft Sam Houston     |

# Sensitivity Analysis

- To examine model sensitivity, we can adjust weights to see if we have unexpected results.
- Experiment showed that the model did not produce unexpected or erratic results.
- +/- 20%: changed the absolute average ranking at most 1.11.
- Largest changes shown below in yellow.
  - +20% Logistics, Corpus Christi improved in ranking 7
  - -20% Project Power, MOT Sunny Point moved down in ranking 6

|                  | Training |      | Future |      | Project Power |      | Logistics |      | Cost |      | Well-Being |      |
|------------------|----------|------|--------|------|---------------|------|-----------|------|------|------|------------|------|
|                  | +20%     | -20% | +20%   | -20% | +20%          | -20% | +20%      | -20% | +20% | -20% | +20%       | -20% |

| absolute average | 0.61     | 0.84 | 0.86   | 1.05 | 1.08          | 1.11 | 0.58      | 0.49 | 0.53 | 0.35 | 0.51       | 0.59 |

# Weight Sensitivity (SRG 6 and Final)

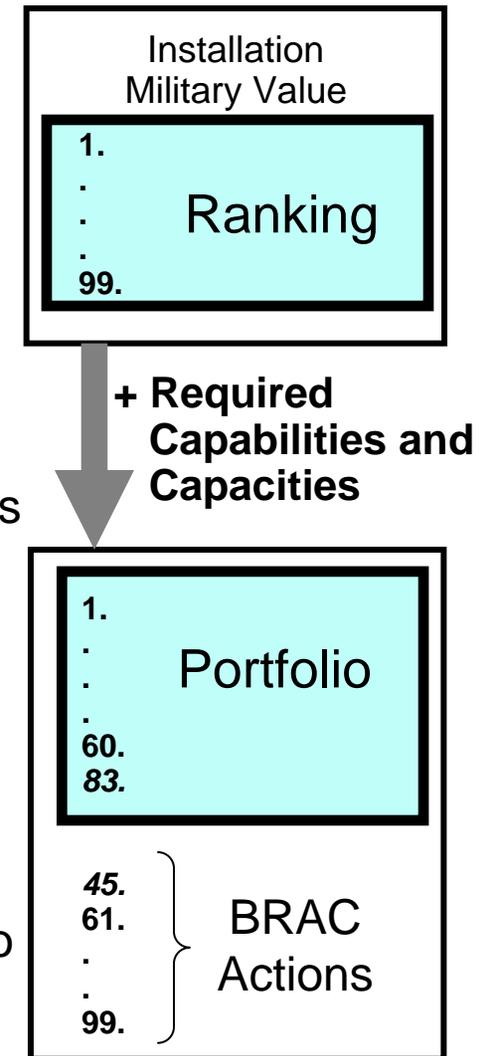

- Installations have different positions, but overall we are 97% consistent with our original analysis.
- Top and bottom of scale are tight, middle is less exact.

- Max change +18 (Fort McCoy from 43 to 25), -14 (Fort Hamilton from 57 to 71)
- Average change is 3.1
- Installations that did not change: fourteen
- Installations change > 6: fifteen

# Next Steps – Portfolio

- Military Value Portfolio
  - Goal: Recommend a set of installations (an Army portfolio) required to support Army needs while maintaining the maximum military value
  - “Pull” unique functions up to the Portfolio if cannot replicate elsewhere (e.g., Ft Rucker, BRAC 1995)
  - “Push” units to higher ranked installations if capacity is available (e.g., Ft McClellan, BRAC 1995)
- Installations not in Portfolio
  - Starting point for BRAC actions
  - At risk from a model perspective; TABS adds military judgment to determine final outcome
  - Military Value is one aspect; TABS works scenarios to determine feasibility of BRAC actions

# Recommendations

- Direct use of Army Imperatives as Considerations for TABS and Army JCSGs reps
- Authorize Military Value Portfolio analysis using initial Military Value Results

***Data and/or Portfolio analysis may change rankings –  
Updates provided to SRG as necessary***

## Why are Military Value Criteria Important?

- The BRAC 05 law, Section 2913(b)(1-5), specifies that “the selection criteria prepared by the Secretary [of Defense] shall ensure that military value is the primary consideration in the making of recommendations for closure or realignment”.
- The Commission may change a recommendation only if it determines “that the Secretary [of Defense] deviated substantially from the force-structure plan and final criteria in making recommendations” (Section 2903(d)(2)(B)).

# Military Value Criteria

1. The current and future mission *capabilities* and the impact on operational readiness of the Department of Defense's total force, *including impact on joint warfighting, training, and readiness.*
2. The availability and condition of land, facilities and associated airspace *(including training areas suitable for maneuver by ground, naval, or air forces throughout a diversity of climate and terrain areas and staging areas for the use of the Armed Forces in homeland defense missions)* at both existing and potential receiving locations.
3. The ability to accommodate contingency, mobilization, and future requirements at both existing and potential receiving locations *to support operations and training.*
4. The cost *of operations* and the manpower implications.

*2005 changes*

# Attribute Comparison Summary

|                                  | BRAC 95 - BRAC 05 | G8 - BRAC 05 |
|----------------------------------|-------------------|--------------|
| Same or enhanced                 | 29                | 16           |
| Concept used                     | 8                 | 4            |
| Included in scenarios            | 9                 | 14           |
| Not included in MVA or scenarios | 11                | 0            |

# Area Cost Factor

# Ranking Changes 95 to 05

- Total attributes reduced from 57 to 40; increased importance of each attribute
- “Category” population changes
  - Added or deleted from study group (inactive ammo plants)
- Moved from “facilities-centric” to more immutable “land-centric” assessment
  - 25 attributes solely measuring facilities to 3
  - Environment increased from 2 attributes to 6
  - maneuver/air space and ranges increased from 6 to 7
- Well Being not assessed in 95
- All attributes applied to all installations

# Attribute Backups

# Heavy Maneuver Area

**Definition:** A combination of the installation’s total acreage and the largest contiguous acreage for training of mechanized formations.

**Purpose:** Determines the installation’s ability to support training and maneuver of mechanized forces. This attribute adds military value for larger contiguous areas within the overall training area.

**Methodology:** Combines the installation’s total heavy maneuver area (including maneuver-rights area when principally scheduled and commonly used by units assigned to the installation for training large, mechanized formations) and its largest contiguous heavy maneuver area into the constructed scale.

Leases receive zero value for this attribute.

58 installations with zero value

| Largest Contiguous Area (1000s) | TOTAL HVY MVR AREA (1000s ACRES) |              |                |       |
|---------------------------------|----------------------------------|--------------|----------------|-------|

# Direct Fire Capability

**DEFINITION:** A combination of the size of the installation’s impact area and the largest direct-fire weapon system capability of an installation range complex.

**PURPOSE:** Measures the ability of an installation’s ranges and impact areas to support direct-fire weapons training.

**METHODOLOGY:** The installation’s value is derived by entering its impact area acreage and longest range at which the largest direct-fire weapon system can fire on the specified ranges into the constructed scale.

Leases receive zero value for this attribute.

# Light Maneuver Area

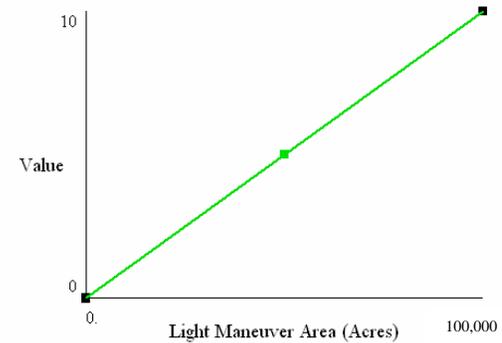

**Definition:** The acreage of the installation available for the maneuver and training of light formations.

**Purpose:** Measures the installation’s ability to support training of light forces.

**Methodology:** The installation’s total light maneuver acreage is its light maneuver score. A maneuver rights area can be counted when the area is controlled or primarily scheduled and commonly used for training purposes by units assigned to the installation. Heavy maneuver acres, impact areas, cantonment areas, ranges, off limits areas, and environmentally sensitive areas that are considered encumbered will not be included.

# Force Deployment

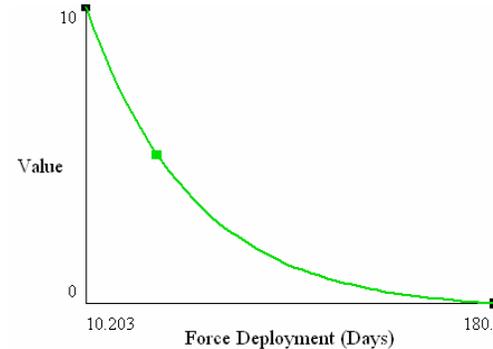

**Definition:** The time, in days, it takes a Unit of Action (UA) (including all assigned equipment and personnel) to deploy eastward and westward from the installation to overseas theater locations using various modes of transport.

**Purpose:** Measures the capability of an installation to support UA deployments.

**Methodology:** The Military Surface Deployment and Distribution Command Transportation Engineering Agency (MSDDCTEA) used the time required to out-load a UA from the installation by either rail or motor, the time required to move from the installation via rail or motor to the closest seaport of embarkation (SPOE,) on the West Coast and either the East or Gulf Coasts, the time required to move from the installation to the nearest aerial port of embarkation (APOE) and the time required for entire unit to transload on aircraft and depart from the selected APOE to derive the installation’s deployment score (in days).

Leases receive zero value for this attribute.

# Materiel Deployment

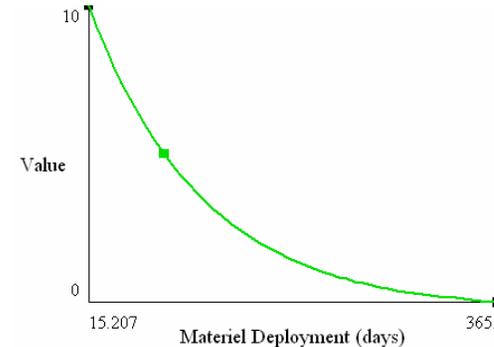

**Definition:** The time, in days, it takes to deploy a notional amount of materiel from the installation eastward and westward from the installation to overseas theater locations using various modes of transport.

**Purpose:** Measures the capability of an installation to support materiel deployment.

**Methodology:** The Military Surface Deployment and Distribution Command Transportation Engineering Agency (MSDDCTEA) used the time required to out-load 1000 ISO containers from the installation by either rail or motor, the time required to move from the installation via rail or motor to the closest seaport of embarkation (SPOE<sub>i</sub>) on the West Coast and either the East or Gulf Coasts, the time required to move from the installation to the nearest aerial port of embarkation (APOE) and the time required for entire unit to transload on aircraft and depart from the selected APOE to derive the installation’s deployment score (in days).

# Buildable Acres

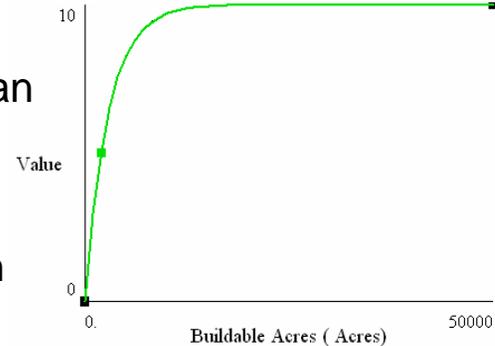

**Definition:** The gross number of buildable acres on an installation based on eleven different land use categories.

**Purpose:** Measures the degree of internal expansion available on an installation. This attribute demonstrates the degree to which an installation may expand, given current physical, building, and land use constraints.

**Methodology:** The installation buildable acres score is the sum of reported buildable acreage within land use categories of Administrative, Airfield Operations, Barracks, Community, Family Housing, Industrial, Medical, Outdoor Recreation, Waterfront Operations, and Undetermined Use. Training and range acreage is excluded from the total.

Leases receive zero value for this attribute.

# Airspace

**Definition:** A combination of the altitude of the airspace available for training that is a part of or controlled by the installation and the size of the associated ground footprint.

**Purpose:** Measures the ability of the airspace controlled by the installation, including areas associated with a maneuver rights agreement, to support training.

**Methodology:** The installation’s Airspace score is a combination of the the maximum above ground level (AGL) of the airspace and the associated usable ground footprint (in square miles) entered into the constructed scale. A maneuver rights area can be counted when the area is easily accessible to the installation and commonly used for aviation-type training.

Leases receive zero value for this attribute.

# Test Ranges

**Definition:** A combination of total acres and the cubic airspace at an installation that serves as a proxy for support of test and evaluation.

**Purpose:** Measures an installation’s test range potential capability in terms of the size of the installation and the airspace above it.

**Methodology:** The installation reports the total cubic area of the airspace and the associated installation size in square miles. Ground footprint will include only land used as Military Operational Areas (MOA). Areas that cannot be over flown including, restricted impact areas, cantonment areas, ranges, off-limits areas, and environmentally sensitive areas will not be included.

Leases receive zero value for this attribute.

63 installations receive minimum value.

# Inter-Service/Partnering Workload

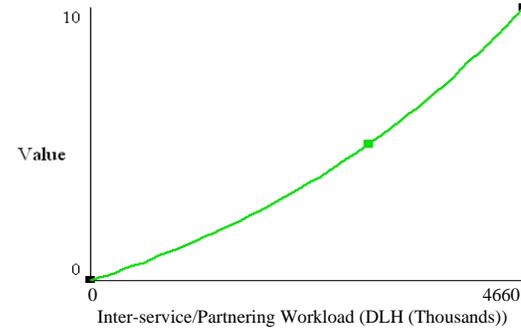

**Definition:** The amount of capacity in Direct Labor Hours (DLHs) used to perform inter-service workload and partnered workload for maintenance and manufacturing operations (less munitions). Interservice workload is defined as work being performed in support of another Service. Partnered workload is any work being performed with the private sector.

**Purpose:** Demonstrates the ability of the depots and arsenals to support the other services, thus enhancing joint operational readiness and public/private partnering.

**Methodology:** FY03 the total number of DLHs performed in support of inter-service workload and workload partnered with industry.

# Joint Facilities

**Definition:** A combination of the size of an installation’s Total Obligation Authority (TOA) (direct and reimbursable) and the percentage of that funding an installation receives from non-Army sources to support that non-army organization’s units or activities.

**Purpose:** Provides a measure of the level of Joint activity on an installation.

**Methodology:** The installation’s value is found by entering its Total Obligation Authority budget size and the percentage of funding received from non-Army sources into the constructed scale.

Leases receive zero value for this attribute.

1 installation with zero value.

| % of funding not Army | TOA  |               |      |
|-----------------------|------|---------------|------|

# Installation Unit Cost Factor

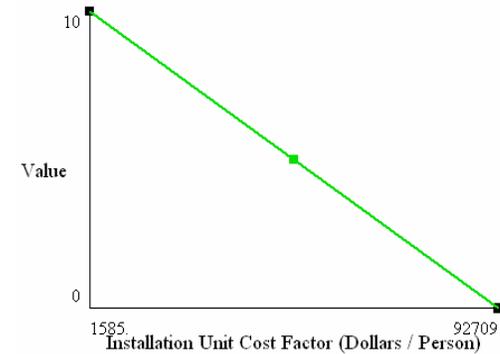

**Definition:** The measure of Base Operations Support (BOS) costs required to support the installation’s authorized population (military, civilian, and contractors). Cost factor does not include civilian payroll, sustainment, restoration, modernization, and family housing costs.

**Purpose:** Measures the relative unit cost of operating an installation.

**Methodology:**

Calculate the installation cost factor by summing the installation’s FY01-03 average execution data for BOS plus the installation facility sustainment requirement, divided by end strength.

Leases receive zero value for this attribute.

# Brigade Capacity

**Definition:** The ability of an installation to support maneuver Brigades (light, heavy, or Stryker Brigade Combat Team (SBCT)).

**Purpose:** Determine if an installation is currently or has the ability to support a maneuver Brigade (light, heavy, SBCT; current and expandability).

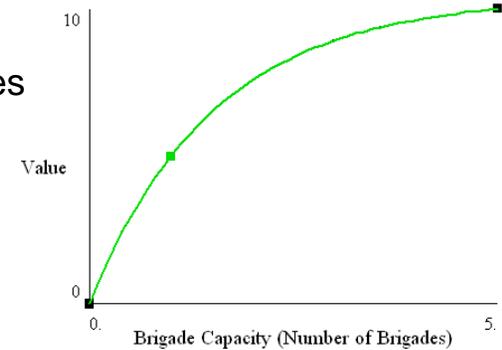

**Methodology:** The installations where maneuver Brigades currently reside receive a score commensurate with the number of Brigades. If the installation passes the screening criteria below receives a score of 1 :

- if it has enough maneuver land to support at least one Brigade.
- if it reported impact area in the capacity data call that could support the firing of weapons IAW Direct Fire attribute Label 1.

Installations that do not currently have a maneuver Brigade or do not pass the screening criteria in 4b, receive a score of zero.

Leases receive zero value for this attribute.

# Environmental Elasticity

**Definition:** Environmental Elasticity is the ability of an installation to absorb additional personnel based on the utility resource physical capacity constraints and resource costs at capacity thresholds.

**Purpose:** To compare installations based on their relative ability to absorb additional personnel, using two installation characteristics: total costs for specified resources at capacity threshold and the number of people that can be supported by the resources at capacity threshold.

**Methodology:** Uses four resources (Water, waste, land maintenance, and energy) to calculate an installation’s physical capacity threshold in personnel. Next, a resource cost per person is determined by installation. The Environmental Elasticity score is derived by plotting cost per person and capacity threshold into the matrix shown.

Leases receive zero value for this attribute.

| Cost (\$K) | Capacity Threshold (Persons) |         |        |
|------------|------------------------------|---------|--------|
|            | <=1000                       | <=20000 | >20000 |

# Critical Infrastructure Proximity

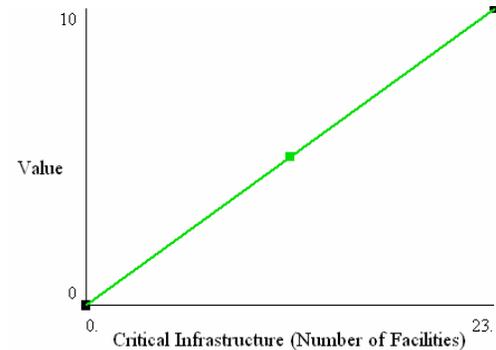

**Definition:** : The number of Critical Infrastructure (CI) nodes located within 150 miles of the installation.

**Purpose:** Measures the installation’s potential capability to support consequence management and homeland defense missions, including military assistance for civil disturbance, natural disasters, CBRN&E accidents, terrorist incidents, and military assistance to civil law enforcement agencies.

**Methodology:** Using GIS software, the Center for Army Analysis determined the number of CI nodes that are within 150 miles of each candidate installation as measured from the grid coordinates (lat/long) of the installation’s headquarters building.

# Accessibility

**Definition:** A combination of an installation’s proximity to major DoD installations and major civilian airports and the number of such installations and airports within a given radii.

**Purpose:** Measures an installation’s potential to conduct/support joint and homeland defense command and control missions by assessing the ability of the installation’s personnel to rapidly and efficiently travel to multiple destinations.

**Methodology:** Values will be assigned using the below table based on the number of major DoD installations (workforce population > 5000) and major civilian airports (2002 enplanement level  $\geq$ 1 million) and their relative proximity to the installation using the constructed scale.

22 installations receive maximum value; 2 receive zero value.

| DISTANCE From Airports (AP) and Installations (Inst) in miles | INSTALLATIONS and AIRPORTS |                |                 |  |
|---|----------------------------|----------------|-----------------|--|
|   | 1 Inst                     | 1 AP OR 2 Inst | 1 Inst AND 1 AP | $\geq$ 2 Inst AND $\geq$ 1 AP OR $\geq$ 2 AP AND $\geq$ 1 Inst |
| $\leq$ 180  | 0.14                       | 0.43           | 1.62            | 3.01   |
| $\leq$ 120  | 0.65                       | 2.28           | 4.48            | 7.18   |
| $\leq$ 60   | 1.43                       | 3.3            | 6.74            | 10   |

# RDTE Mission Diversity

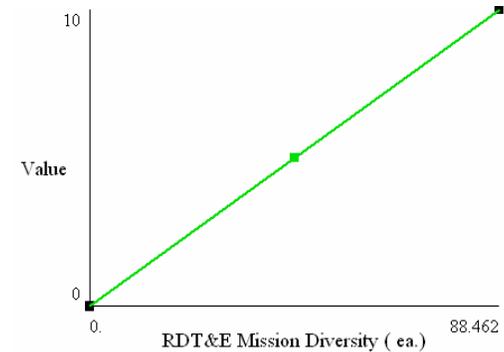

**Definition:** A weighted sum of scores based on the execution of 13 technical capability areas on an installation and the installation’s test resource categories that support RDTE.

**Purpose:** Measures the level of RDTE diversity that an installation can support.

**Methodology:** An installation will receive value for supporting each of 13 Technical Capability Areas and its ability to provide 5 test resource categories. The technical capability and test resource categories are combined in a weighted equation.

Leases receive zero value for this attribute.

# Soil Resiliency

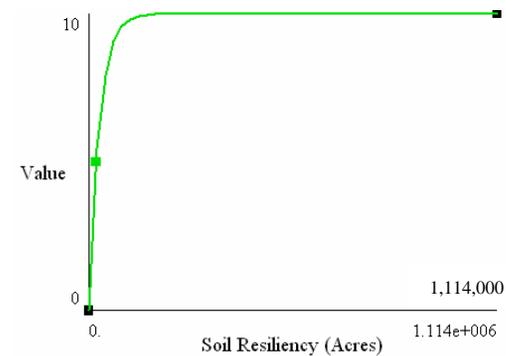

**Definition:** A measure of the installation’s soils ability to sustain Army training.

**Purpose:** Measures the resiliency of an installation’s training land, by using Highly Erodible Land (HEL) classification as a proxy. HEL class is a nationally recognized indicator that can be easily understood by both military trainers and natural resources managers.

**Methodology:** The installation’s total land acreage characterized as “Not Highly Erodible” (Not HEL) will determine its Soil Resiliency score. Any installation that does not have range capacity to conduct maneuver training will receive no value under this attribute.

Leases receive zero value for this attribute.

| 5. Dugway PG        |

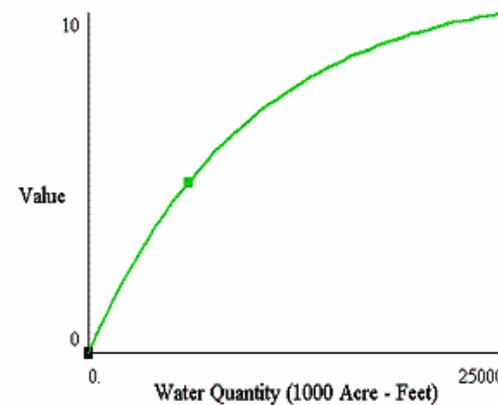

# Water Quantity

**Definition.** The availability of additional water resources measured in terms of thousand acre-feet.

**Purpose.** Measures the availability of water resources within the geographic region of the installation.

**Methodology.** The water available to each installation on an annual basis is calculated by summing all available water supply sources and subtracting from this the average annual water usage.

Leases receive zero value for this attribute.

13 installations have maximum value; 18 installations have zero value

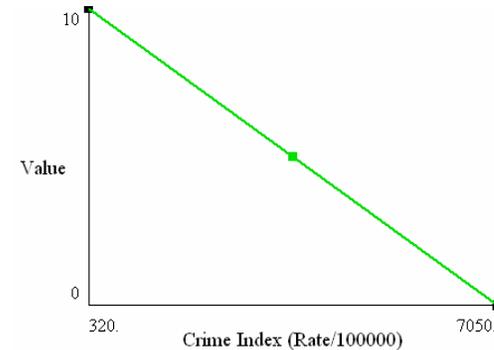

# Crime Index

**Definition:** The level of violent and property crimes near the installation as reported by the Uniform Crime Reporting (UCR) Program.

**Purpose:** Measures the level of crime where the highest concentrations of military families live off-post. The UCR index represents the relative safety of these locations.

**Methodology:** From the 2002 crime reports, determine the crime index of the installation's Metropolitan Statistical Area (MSA) use the state average for installation MSAs that do not have a UCR.

| Top 5 Installations | Bottom 5 Installations       |
|---------------------|------------------------------|
| 1. Ft Leonard Wood  | 84. Hawaii (3 installations) |
| 2. Ft Huachuca      | 85. Corpus Christi AD        |
| 3. Ft Buchanan      | 86. Yuma PG                  |

| 5. Carlisle Brks    | 88. Pine Bluff Arsenal       |

# Housing Availability

**Definition:** A combination of the number of available rental vacant units and Basic Allowance for Housing (BAH) rates.

**Purpose:** Compares the availability of rental vacancies to the amount of BAH computed for the installation, which provides a general measure of affordable housing availability.

**Methodology:** The installations value is found by entering the installation’s rental vacancy for the installation’s Metropolitan Statistical Area (2000 Census) and its BAH rate (from DFAS) into the constructed scale.

3 installations receive zero value

| BAH (\$)          | Rental Vacant Units |               |       |
|-------------------|---------------------|---------------|-------|
|                   | ≤ 3000              | 3000<and≤8000 | >8000 |
| > 1600            | 0.00                | 1.07          | 4.72  |
| > 1200 and ≤ 1600 | 0.32                | 2.52          | 7.66  |
| ≤ 1200            | 1.11                | 4.81          | 10.00 |

| 7. Lake City AAP    |                           |
| 8. Ft Buchanan      |                           |

# Urban Sprawl

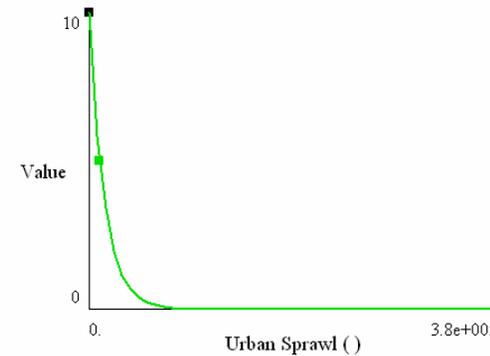

**Definition:** A linear forecast to 2020 of urbanization, based on changes in land use from 10 years of historical data.

**Purpose:** Evaluates land use changes and encroachment along the edges of military installations including a one-mile buffer around the installation.

**Methodology:** Determine the percent change (%) in land use around an installation from non-urban to urban, by comparing current spatial imagery to 1992 imagery. The percent change is normalized for the size of the installation, and a projection of encroachment is made to the year 2020. The higher the projected urbanization, the lower the military value.

Leases receive zero value for this attribute.

4 installations receive zero value.

# Workforce Availability

**Definition:** Workforce includes individuals ages 25 and older within a 50 mile radius of each installation.

**Purpose:** This is a measure of the availability of a workforce.

**Methodology:** Using the longitude and latitude for each study group installation provided by TABS, the United States Military Academy’s (USMA) Office of Economic & Manpower Analysis (OEMA) determined the available labor supply, using “GeoLytics” (which stratifies the U.S. Census 2000 Long Form data into finely graded geographical regions) and they determined the number of people ages 25 and older who live within a 50 mile radius of each installation.

19 installations get maximum value.

| Bottom 5 Installations |               |
|------------------------|---------------|
| 84.                    | Ft Wainwright |
| 85.                    | Ft Irwin      |
| 86.                    | Hawthorne AD  |
| 87.                    | Yuma PG       |
| 88.                    | Dugway PG     |

# In-State Tuition Policies

**Definition:** A measure of eligibility of Soldiers and family members to receive in-state educational benefits.

**Purpose:** Determines the status of state tuition education benefits for Soldiers and family members, which provides a measure of future education affordability for Soldiers and their families at their installation.

|               | Personnel |               |
|---------------|-----------|---------------|
| TUTION POLICY | Soldier   | Family Member |
| Stationed     | 1.65      | 4.33          |
| Continuity    | N/A       | 10            |

**Methodology:** Use the state policy residency requirements from the “DoD In-State Resource” database and the constructed scale to determine the score for the installation. If the state does not have a statute or policy governing tuition rates for military and family members, a value of zero will be given.

15 installations receive zero value; 36 receive maximum value

# Maintenance/Manufacturing

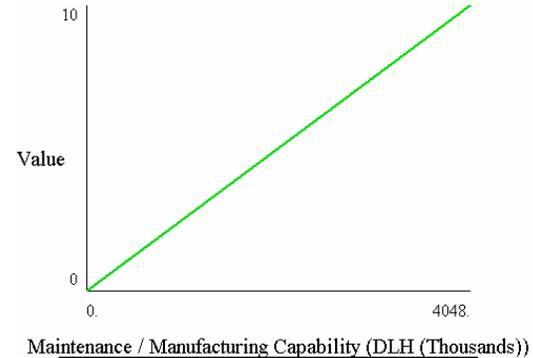

**Definition:** An installation’s total capacity and capacity available for additional maintenance and manufacturing workload (less munitions) measured in Direct Labor Hours (DLHs).

**Purpose:** Measures total capacity and capacity available for additional maintenance and manufacturing workload.

**Methodology:** A weighted equation sums the installation’s FY03 total capacity (weight of 1) and capacity available for additional maintenance and manufacturing workload (weight of 0.25), across all commodity groups.

Leases receive zero value for this attribute.

# Munitions Production Capability

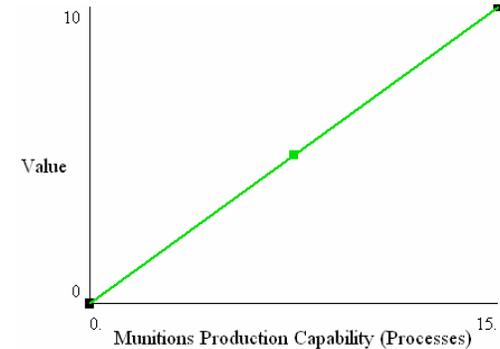

**Definition:** The number of munitions production sub-processes under three overarching processes (explosive, metal parts, and load-assemble-pack) that have been performed at the installation during the last two years.

**Purpose:** The variety of munitions-related industrial-base sub-processes performed at an installation provides a measure of both current capability and the capability to respond to future requirements.

**Methodology:** Within the three overarching munitions production processes (LAP, Metal Parts, and Explosives), the sub-processes an installation performed within the last two years are totaled to determine the installation’s military value.

Leases receive zero value for this attribute.

# Area Cost Factor

**Definition:** A measure of the installation’s military construction costs relative to the national average..

**Purpose:** Provides a comparative index for the cost to construct, modernize or expand a notional facility at an installation.

**Methodology:** TABS will pull the ACF Index from the Facilities Pricing Guide and determine the installation’s military value. If the installation is not specifically listed in the pricing guide or not included in a regional ACF, the ACF for the host state will be used.

Leases receive zero value for this attribute.

# Mobilization History

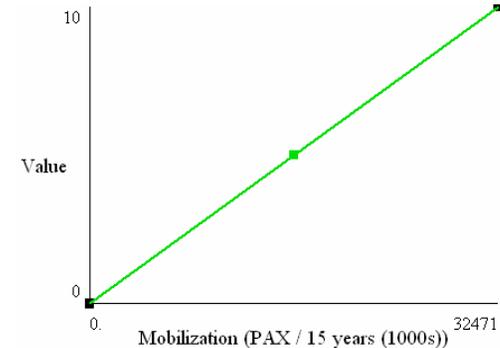

**Definition:** The fifteen-year sum of the number of soldiers mobilized at an installation.

**Purpose:** Measures the installation’s potential future contribution to Reserve Component mobilization and deployment capability.

**Methodology:** The mobilization score is the sum of Reserve Component soldiers mobilized on the installation over the past fifteen years. Mobilization numbers will include only Reserve Component soldiers assigned to units and those mobilized as individuals.

Leases receive zero value for this attribute.

53 installations with zero value

| Top 10 Installations |             |
|----------------------|-------------|
| 1.                   | Ft Dix      |
| 2.                   | Ft Benning  |

| 9.                   | Ft Polk     |
| 10.                  | Ft Campbell |

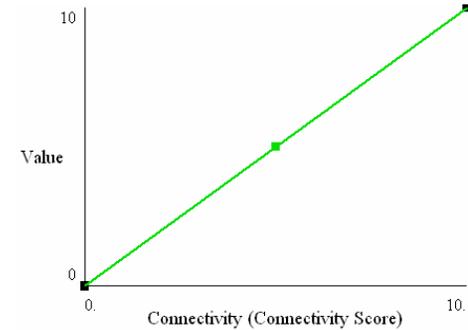

# Connectivity

**Definition:** A combination of the completeness of the on-post communications infrastructure, the installation’s potential connectivity to cellular communications and commercial long haul fiber optic networks, and the level of spectrum encroachment the installation is experiencing.

**Purpose:** To measure installation’s ability/capability to provide its tenant units and activities access to a robust, high capacity and expandable communications network.

**Methodology:** The Army G6 determined a rating for each of the four connectivity components which were weighted and summed to derive the installation connectivity score.

11 installations have maximum value and 1 has minimum value (Hawthorne AD).

| Top Installations |
|-------------------|
| 1. White Sands MR |
| 2. Ft Riley       |
| 3. Ft Huachuca    |
| 4. Anniston AD    |

| 8. Ft Monmouth    |
| 9. Ft Meade       |
| 10. Ft Gillem     |
| 11. Ft Detrick    |

# Air Quality

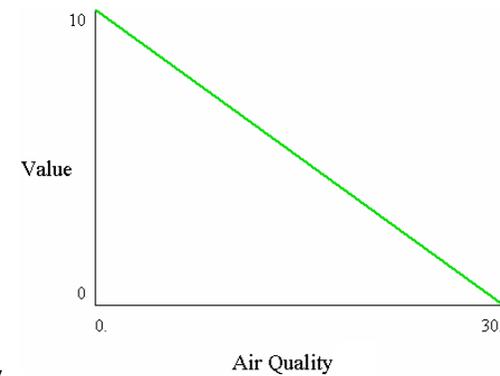

**Definition:** The air quality attainment status observed at an installation based on the presence of criteria pollutants.

**Purpose:** Measures the degree of air attainment quality for the *criteria pollutants*. Air attainment quality status reflects the “quality” of air above an installation. This quality is a quality-of-life issue for the soldiers and their families living there. Additionally, the attainment status places training or mission restrictions on any activities that may further degrade the quality of air.

**Methodology:** Calculate the installation’s air attainment status using four criteria pollutants (CO, O3 (8 Hour), PM 2.5, and PM 10) and grouping them into one of 3 bins (“attainment”, “moderate non-attainment”, and “serious non-attainment”). The Air Quality Score can range from 0 to 40, with 0 indicating attainment for all distinguishing pollutants. A lower score indicates higher military value.

# Noise Contours

**Definition:** The number of acres off the installation that are incompatible with current land use practices due to Noise Contour Levels II and III.

**Purpose:** Measures the degree of external encroachment placed on a given installation as a result of noise contours extending off-installation. Primarily identifies areas where noise levels from military sound sources are high enough to be incompatible with "noise sensitive" areas such as housing, schools, churches, and hospitals. Attribute demonstrates the potential for military training to be adversely impacted because of incompatible land use practices.

**Methodology:** Determine Noise score by plotting the sum of gross acres of Noise Zones II and III off-installation against installation size, using the matrix shown.

Leases receive zero value for this attribute.

69 have maximum value.

| Installation Size (ACRES) | Noise Zones II & III (Gross Acres) |                |       |       |
|---------------------------|------------------------------------|----------------|-------|-------|
|                           | > 10K                              | >100 and <=10K | <=100 | 0     |
| <= 75K                    | 0.00                               | 1.50           | 3.39  | 10.00 |
| >75K and <=200K           | 0.64                               | 2.23           | 4.53  | 10.00 |
| >200K                     | 1.41                               | 2.68           | 6.82  | 10.00 |

| 88. Aberdeen PG      |

# Employment Opportunities

**Definition:** A combination of median income and unemployment rate experienced near the installation.

**Purpose:** Evaluates family employment opportunities by comparing unemployment rates with median income near the installation.

**Methodology:** The installation’s value is found by entering the installation’s median income and the average unemployment rate (1996 to 2002) for the installation’s Metropolitan Statistical Area into the constructed scale below.

19 installations receive zero value.

| Median Income (\$) | Unemployment Rate (%) |                 |       |
|--------------------|-----------------------|-----------------|-------|
|                    | > =6.0                | ≥ 4.0 but < 6.0 | <4.0  |
| < 45K              | 0                     | 1.136           | 2.577 |
| 45K - 60K          | 0.352                 | 2.222           | 5.812 |
| > 60K              | 1.592                 | 4.17            | 10    |

# C2 Target for Focus Facilities

**Definition:** A combination of an installation’s total square footage of the ACSIM designated focused set of facilities and the funding required to achieve an ISR quality rating of C-2 for those facilities as compared to the total square footage and funding required for other installations.

**Purpose:** Measures an installation’s overall facility quality, using the installation’s contributions to the total cost to improve its focus facilities to C2, as compared to other installations.

**Methodology:** The installation’s value is found by entering its total square footage of focus facilities and its % cost to reach C2 into the constructed scale. The installation % cost to reach C2 is derived by dividing its cost to reach C2 by the total C2 costs for all 88 BRAC 05 installations.

Leases receive zero value for this attribute.

24 installations receive maximum value; 36 receive minimum value.

|                       | Quantity (SQ FT 1000s) |         |        |
|-----------------------|------------------------|---------|--------|
| C2 as % of Total Cost | <=10000                | <=50000 | >50000 |
| >1.0%                 | 0.07                   | 0.95    | 2.66   |
| <=1.0%                | 0.95                   | 2.73    | 7.34   |
| <=0.5%                | 2.84                   | 5.03    | 10.00  |

# MOUT Capabilities

**Definition:** A combination of the size in acres of the facility and the quality of the buildings associated with the training site(s).

**Purpose:** Determines the installation’s ability to support MOUT training.

**Methodology:** The installation’s MOUT score is a combination of the facility size (in acres) and its quality (the category of its MOUT facility) entered into the constructed scale. The categories are:

**Category A:** Less than 8 buildings, no instrumentation, temporary construction.

**Category B:** At least 8 but less than 16 buildings, less than 50% instrumented, some temporary construction.

**Category C:** At least 16 buildings, greater than or equal to 50% instrumented, at least 50% permanent construction.

Leases receive zero value for this attribute.

11 Installations get maximum value; 57 installations get zero value

| Size of MOUT Facilities | Bldg. Category |      |      |
|-------------------------|----------------|------|------|
|                         | A              | B    | C    |

# Medical Care Availability

**Definition:** The number of Primary/Specialty Care providers available per population near the installation.

**Purpose:** Indicates the ability of civilian primary and specialty care providers to accommodate the population on and adjacent to the military installation.

**Methodology:** The number of Primary/Specialty Care providers for the installation’s Metropolitan Statistical Area (MSA) (from the American Hospital Association Database) is divided by the MSA’s total population.

6 installations receive zero value.

# Supply and Storage Capacity

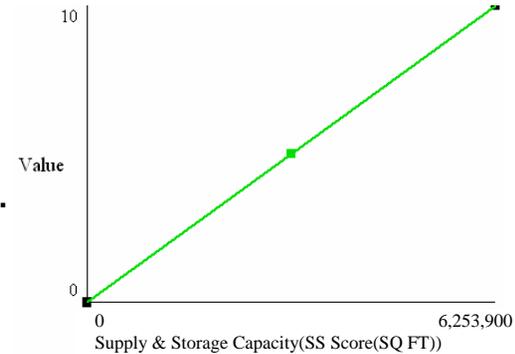

**Definition:** The weighted sum by quality condition of the square footage of storage capacity on an installation (less ammunition and wet tank storage).

**Purpose:** Measures total storage capacity available.

**Methodology:** Uses a weighted sum of the installation’s existing Supply and Storage facility square feet for 8 Supply and Storage Facility Category Groups. The weighted sum is calculated by multiplying a quality factor and the corresponding amount of each type of square feet, and the summing of these values.

Leases receive zero value for this attribute.

# Ops/Admin Facilities

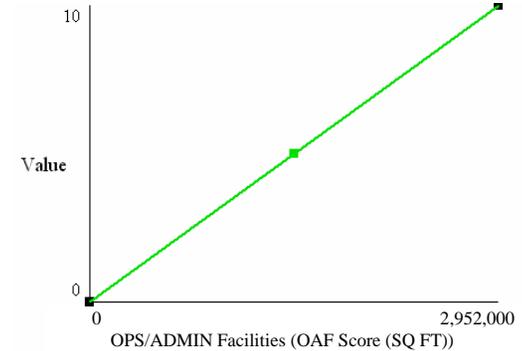

**Definition:** The weighted sum (by quality condition) of the square footage of operations and administrative facilities on an installation.

**Purpose:** Measures the installation’s current capability to accomplish operations and/or administrative missions as well as its ability to expand to accommodate additional Ops/Admin missions.

**Methodology:** MVA calculates the Ops/Admin Facilities score using a weighted sum of the existing Operations and Administrative square feet for 7 OPS/Admin Facility Category Groups. The weighted sum is calculated by multiplying the quality factor and the installation’s corresponding amount of each type of square feet, and then summing these values.

# Ammunition Storage Capacity

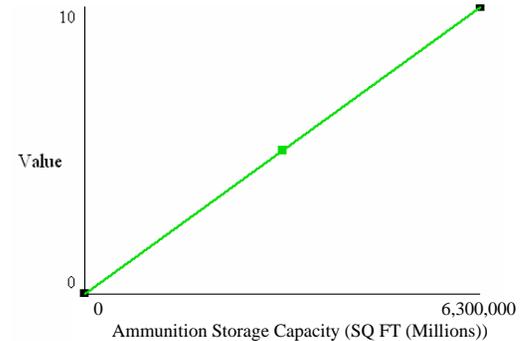

**Definition:** An installation’s explosive and inert maximum storage capacity and unutilized capacity measured in square feet.

**Purpose:** Measures maximum and unutilized storage capacity to determine available capacity for current and future storage requirements.

**Methodology:** A weighted equation sums the installation’s maximum amount of explosive and inert storage capacity (weight of 1) and the installation’s total unutilized storage capacity (weight of 0.25).

Leases receive zero value for this attribute.

# Applied Instructional Facilities

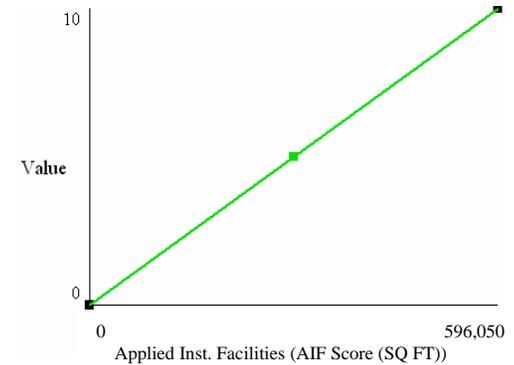

**Definition:** The weighted sum (by quality condition) of the square footage of applied instructional facilities on an installation including square footage of facilities that may be converted to applied instructional facilities.

**Purpose:** Measures the existing capability of the installation to conduct training by considering special purpose facilities used for, or convertible facilities that could be used for, applied instruction.

**Methodology:** The Applied Instructional Facilities score (AIF) is a weighted sum calculated by multiplying a quality factor and the installation’s total SF of each type (total of 9 Facility Category Groups), and then summing of these values.

Leases receive zero value for this attribute.

# General Instructional Facilities

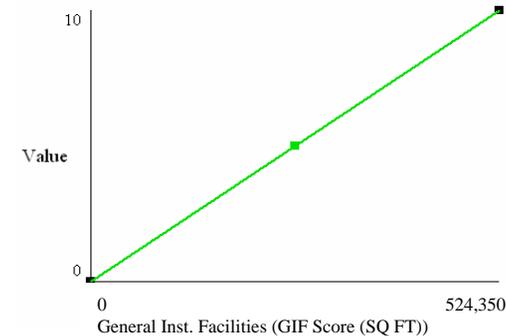

**Definition:** The weighted sum (by quality condition) of the square footage of general instructional facilities on an installation.

**Purpose:** Measures the existing capability of the installation to conduct training by considering general-purpose facilities used for general instruction.

**Methodology:** Calculate a General Instructional Facilities (GIF) score using the installation’s total square feet of General Instructional facilities (Facility Category Group 17120), in each of the three condition codes, multiplied by their corresponding quality factor, and then summing these values.

Leases receive zero value for this attribute.

28 installations with zero value

| Top 5 Installations |
|---------------------|
| 1. West Point       |
| 2. Ft Leonard Wood  |
| 3. Ft Sill          |
| 4. Ft Sam Houston   |
| 5. Ft McNair        |

24 August 2004  
BRAC 2005 SRG#10  
SECRETARY OF THE ARMY CONF ROOM, 3D572

SECRETARY, DR Craig College  
RECORDER, MS Stephanie Hoehne

Army JCSG members were also present and introduced at this SRG.

PURPOSE:

- To provide updates
- To present and seek SRG approval of recommendation to treat Army Imperatives as Considerations and authorization to proceed with Military Value Portfolio Analysis using initial Military Value results.
- To present the BRAC 05 SRG meetings schedule

**ACTIONS:**

Dr. College opened the meeting by welcoming the group and immediately began the briefing. In reviewing the BRAC timeline, Dr. College stated that TABS is just beginning to develop proposals. September/October will be used to review JCSG proposals and Nov/Dec will be used to review TABS proposals.

The VCSA questioned HSA representative, Mr. Tison, whether the Services are consistent in the data they are providing. Answer was that Service cultural differences generate some challenges; each Service's data collection system is different, but it will all be certified data and "good enough" if not perfect for analysis.

The SRG approved using Army Imperatives as Considerations in analysis and scenario development, which mirrors the decision of the ISG. In practice this means that the Considerations will be treated as important issues that should be supported in the analyses but not as absolutes in that, for reasons of military judgment or military value, they may be violated in deliberative decision by the BRAC SRG.

The SRG approved the initial results Military Value analysis and authorized its use in Military Value Portfolio analysis.

- During the discussion, the VCSA noted that Fort Sill also had brigades (not noted on the chart), which were fires (artillery) brigades.
- VCSA noted that the amount of acreage may be misleading, as some of it is not useable for maneuver training. He cited White Sands as an example.
- The VCSA asked how the ongoing G3 analysis regarding power projection platforms (PPPs) would be factored into the BRAC analysis. Dr. College responded that the G3 and BRAC analyses look at the same attributes, and that TABS is working closely with G3 in developing proposals and scenarios.

**General Comments:**

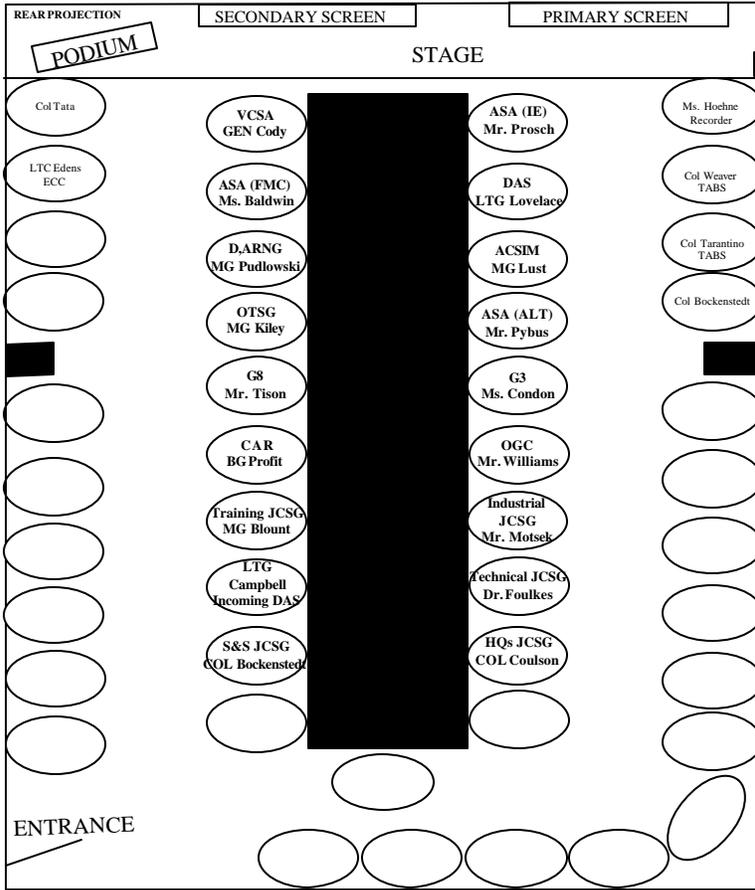

- The VCSA noted that the BRAC process was more "Big R (realignment), little C (closure)." The 75,000 troops and approximately 250,000 dependants returning from overseas will be absorbed into much of the

existing capacity. G8 noted that IGPBS actions limit capacity opportunities, however, the reset of returning units can be supported/informed by data generated by BRAC.

- VCSA noted that the work done in preparation for FCS and Stryker Brigades complements BRAC analysis in deciding how and where to place units.
- VCSA expressed concern about maintaining sufficient medical capability to ensure adequate response and support to Soldiers and families.

A question arose concerning studying Fort Greely within BRAC analysis. The BRAC SRG did not include Ft. Greely in our approved BRAC study list because it was closed in a prior BRAC rounds and operational control transferred to the Missile Defense Agency. Therefore, adding it to our study list as a site being considered for closure or realignment (losing installation) did not make sense. Dr. College noted that nothing prohibits us from proposing to locate additional Army units to Ft. Greely (requires coordination with MDA). If we do that, the Army would likely have to reexamine its level of installation management and support at Ft. Greely and perhaps “reopen” Greely from that perspective.

**SECRETARY OF THE ARMY CONFERENCE ROOM 3D572  
GARDNER ROOM**

**CAPACITY: 44**  
08/31/2004 10:28:15 AM

**SUBJECT: BRAC SRG #10**  
**DATE/TIME: 24 Aug 04 / 1400-1500**

Scheduling:

Dr. College then discussed the way ahead for future SRG meetings.

ASA (I&E) noted that, beginning 14 September, the SRG will be meeting every Tuesday at 1400 to complete scenario reviews.

**TASKERS:**

1. Mr. Pybus asked why Corpus Christi was not included in the matrix showing the rankings of Army depots in past and the current BRAC rounds. Dr. College took the question for later response.
