

Received  
06/13/2005

Adm. Harold W. Gehman Jr., USNR:

Charles A. Lindbergh "Lindy" made the right choice. Today there are 70 years of solid, uninterrupted, proof he was correct.

Despite these 70 years of unimpeachable proof, your Commission has been given information in conflict with established facts.

During 1927-28, Lindbergh, and his wife Anne, spent many hours flying their plane across our nation. He had one commission -- to find the ideal sites for two interior terminal points. -- Sites where an airline would construct all the facilities needed to assure its customers safety and schedule reliability; -- Sites where the airline would construct all the facilities necessary to the best maintenance and operation of its transcontinental airliners.

Lindbergh's research completely satisfied him, the airline, and government officials, that only one location would meet all requirements for the first terminal west of the Los Angeles area. That location, selected, built on, and operated for that purpose, was the wide-open area of land now the site of Cannon Air Force Base, New Mexico.

Lindbergh's choice has been proven unquestionably correct.

There is a very special check list attached. You are challenged to help put your Commission members to the task of completing this check list. When finished, list could help identify whether there is ANY OTHER North American base of aeronautical operations that more efficiently and effectively serves the essential and best security and protective welfare of our people.

If ANY OTHER base more efficiently and effectively serves our national interest, it should be placed ahead of Cannon. But there are many, many, many individuals putting our money and reputations on the line betting that you will, instead, insist that Cannon be removed from the closure list and instead placed at the TOP of any list that proclaims: "Best and Superior. Meets or Exceeds all Full Readiness Operational and Training requirements".

May I count on you to locate and to deleted from the Commission records any information that is contrary to the checklist; and to retain Cannon in its role as the first line of defense and maintenance of protection for our people?

Duffy Sasser  
200 Kathie Dr  
Clovis, NM 88101

## CHECK LIST

- Apply to  Cannon Air Force Base, New Mexico  
 Other installation: \_\_\_\_\_

POSITIVE FACTORS - lending suitability to aeronautical training, readiness, and operational functions.

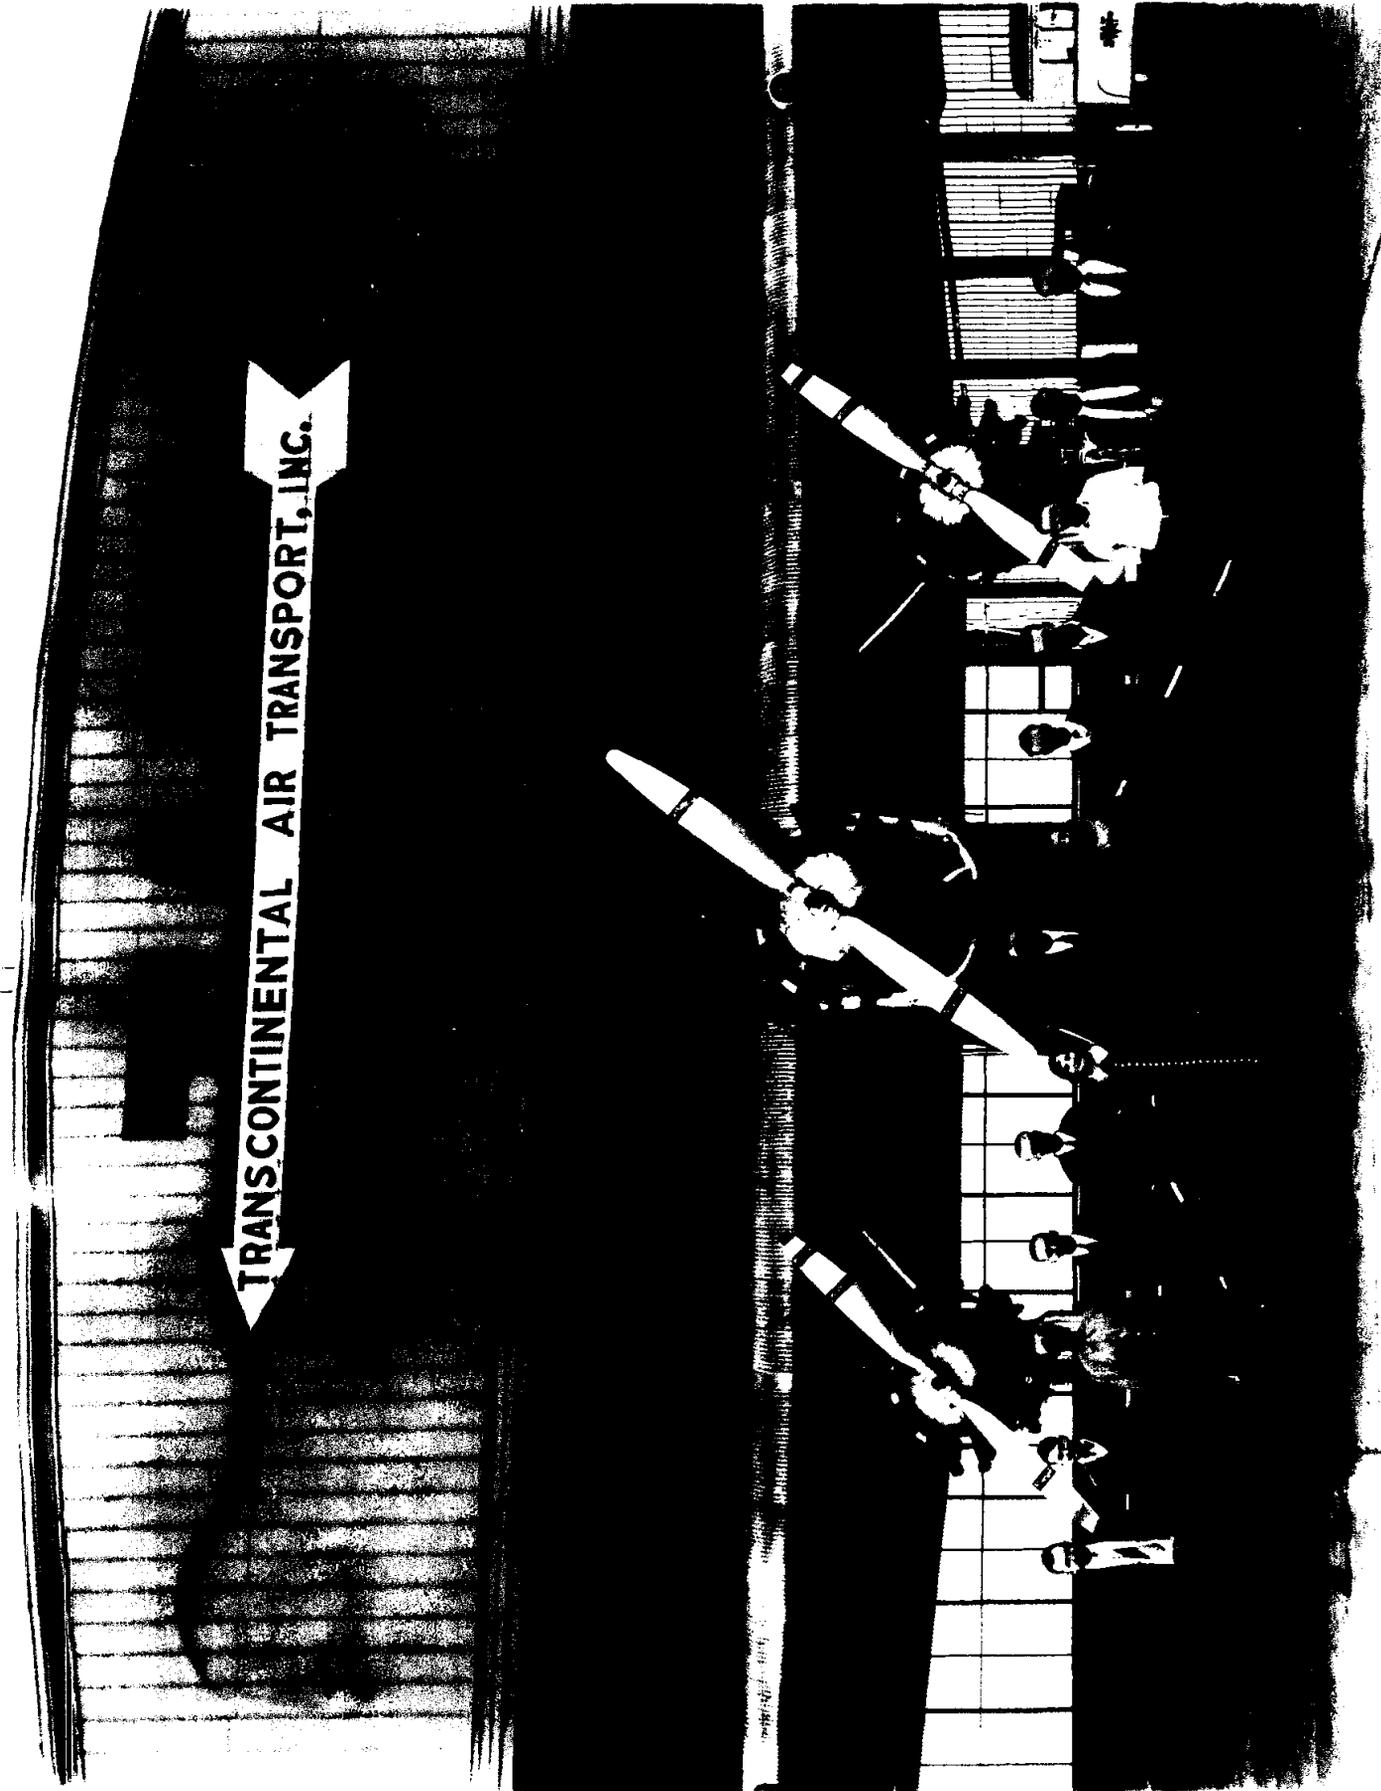

- Clear, Level, Land. Lands utilized by and surrounding the base should be level and clear in all directions within 100 flying miles.
- No Natural Encroachments. Land area in all directions free of natural obstructions and encroachments for more than 100 miles.
- No Man-made Encroachments. Land area in all joining directions free of man-made aerial encroachment and protected by legal regulations to assure that such protection remains in place for the expected life of the base.
- Weather a Superior Factor. An up-to-date record showing there are zero weather-related aircraft accidents or incidents within rational flying distances. There must be at least 320 days a year, on average, available for flying operations.
- Large Near-by Bombing Range. Large, air-ground bombing range to be not more than a few seconds flight from base. Range must be assured at least 3,600 square miles of operational land area.
- Fuel and Maintenance Factors. The resulting fuel and maintenance saving due to the short flight to air-ground bombing range are major factors.
- Bombing Range Supersonic Flight Capability. The air-ground bombing range must be assured free of restrictions that might limit flights to less than supersonic speeds. Sonic booms permitted.
- Bombing Range Encroachments. The air-ground bombing range must be continually and legally assured of freedom from existing and future structural encroachments and protected from claims of damage due to flight operations and associated noises. Such protection must extend in all directions to a rational distance and altitude.
- Low-density Commercial Air Traffic. Nearest general aviation facilities should be more than 13 miles from base.

- Existing Facilities in Superior or Excellent Conditions. Base must be substantially free of need for facility upgrades and replacements. Evidence of continual careful refurbishments and installation of new improvements are major beneficial factors.
- Readiness Factors. The base and all its facilities must be more than adequate to match the foreseeable needs of air combat, support, reconnaissance, training and operation. It must be of sufficient size and capability to allow for prompt, efficient, and economical expansion and upgrade if unforeseen factors should arise.
- Environmental Factors. Installation must be free, to greatest extent reasonable possible, of known or suspected environmental problems. Recently developed environmental statements should show full approval by controlling bodies.
- Cost of Living Friendly: There must be highly-positive evidence that neighboring communities aggressively seek and actually secure maximum number of amenities to assure the best and most economical of living conditions for base families that live off-base, seek off-base elementary and advanced schooling, do off-base shopping, seek off-base recreational facilities. The communities must have a substantial pool of openings for employment of family members. And state-of-the-art medical services must be immediately available at costs well below national averages. .
- People Friendly. There must be long-standing and continuing facts in evidence that the base and its personnel are aggressively welcomed and supported in all elements. There must be no evidence of community adversity to the base and its people.
- What Installation Matches or Exceeds these and other essential requirements?

**Cannon Air Force Base provides tremendous military value because it is a modern, cost-effective base, with no encroachment and has unrestricted air space.**

The enclosed photo is for you. Perhaps it could become part of your memories album. It shows Lindbergh, airline officials, and his crew and associates on the historic 1929 day the airline operated the first flight of its transcontinental service. The plane is brand new -- just delivered to the airline by the manufacturer. The photo was made at the northeast end of what is now one of Cannon's runways. Lindbergh is the center man in the photo.

The enclosed photo is for you. Perhaps it could become part of your memories album. It shows Lindbergh, airline officials, and his crew and associates on the historic 1929 day the airline operated the first flight of its transcontinental service. The plane is brand new -- just delivered to the airline by the manufacturer. The photo was made at the northeast end of what is now one of Cannon's runways. Lindbergh is the center man in the photo.

TRANSCONTINENTAL AIR TRANSPORT, INC.

Gen. (Ret.) Sue Ellen Turner:

Charles A. Lindbergh "Lindy" made the right choice. Today there are 70 years of solid, uninterrupted, proof he was correct.

Despite these 70 years of unimpeachable proof, your Commission has been given information in conflict with established facts.

During 1927-28, Lindbergh, and his wife Anne, spent many hours flying their plane across our nation. He had one commission -- to find the ideal sites for two interior terminal points. -- Sites where an airline would construct all the facilities needed to assure its customers safety and schedule reliability; -- Sites where the airline would construct all the facilities necessary to the best maintenance and operation of its transcontinental airliners.

Lindbergh's research completely satisfied him, the airline, and government officials, that only one location would meet all requirements for the first terminal west of the Los Angeles area. That location, selected, built on, and operated for that purpose, was the wide-open area of land now the site of Cannon Air Force Base, New Mexico.

Lindbergh's choice has been proven unquestionably correct.

There is a very special check list attached. You are challenged to help put your Commission members to the task of completing this check list. When finished, list could help identify whether there is ANY OTHER North American base of aeronautical operations that more efficiently and effectively serves the essential and best security and protective welfare of our people.

If ANY OTHER base more efficiently and effectively serves our national interest, it should be placed ahead of Cannon. But there are many, many, many individuals putting our money and reputations on the line betting that you will, instead, insist that Cannon be removed from the closure list and instead placed at the TOP of any list that proclaims: "Best and Superior. Meets or Exceeds all Full Readiness Operational and Training requirements".

May I count on you to locate and to deleted from the Commission records any information that is contrary to the checklist; and to retain Cannon in its role as the first line of defense and maintenance of protection for our people?

Duffy Sasser

## CHECK LIST

- Apply to  Cannon Air Force Base, New Mexico  
 Other installation: \_\_\_\_\_

POSITIVE FACTORS - lending suitability to aeronautical training, readiness, and operational functions.

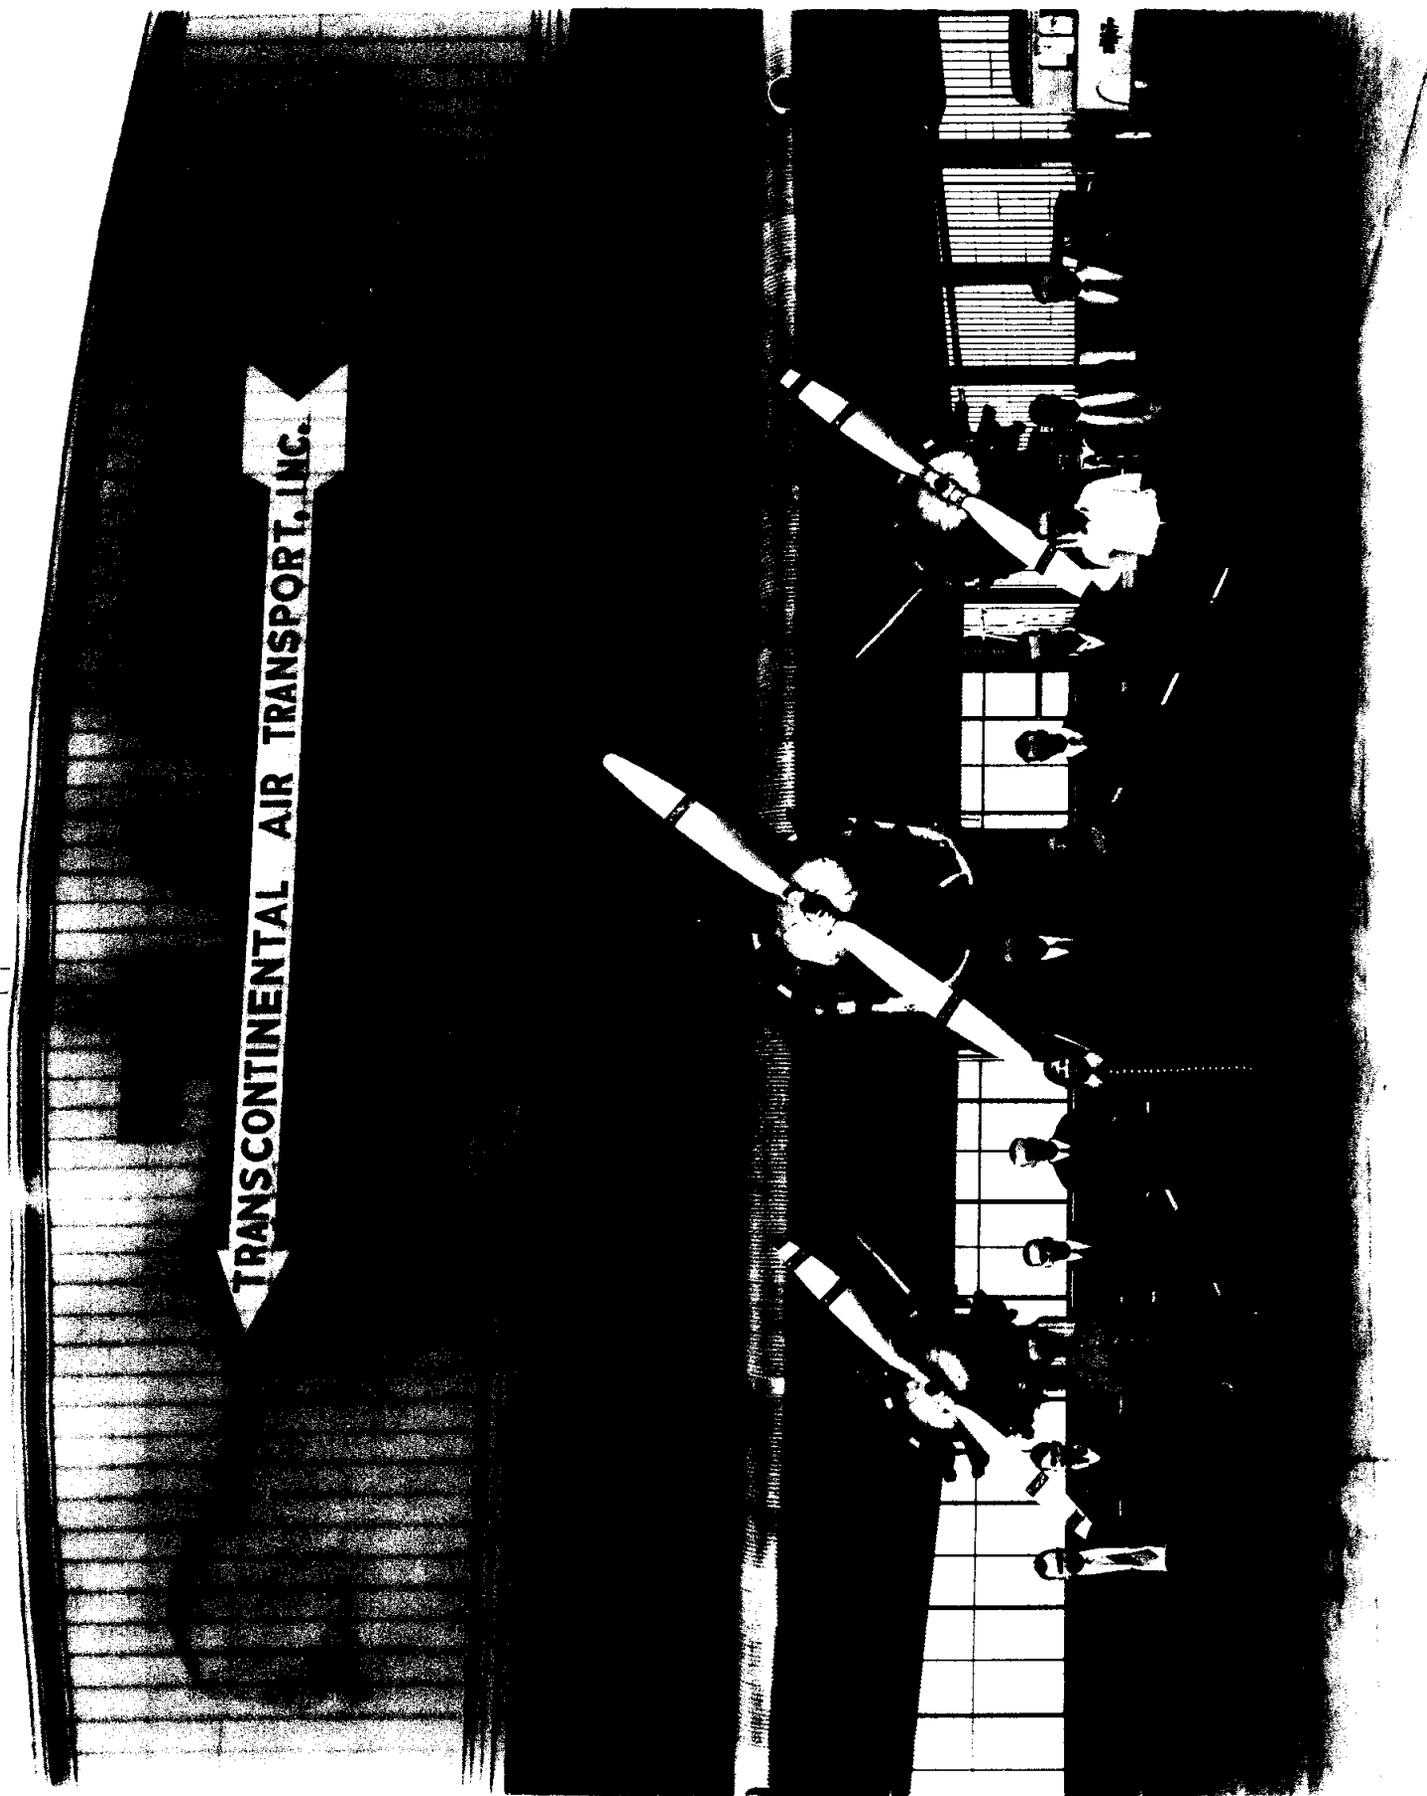

- Clear, Level, Land. Lands utilized by and surrounding the base should be level and clear in all directions within 100 flying miles.
- No Natural Encroachments. Land area in all directions free of natural obstructions and encroachments for more than 100 miles.
- No Man-made Encroachments. Land area in all joining directions free of man-made aerial encroachment and protected by legal regulations to assure that such protection remains in place for the expected life of the base.
- Weather a Superior Factor. An up-to-date record showing there are zero weather-related aircraft accidents or incidents within rational flying distances. There must be at least 320 days a year, on average, available for flying operations.
- Large Near-by Bombing Range. Large, air-ground bombing range to be not more than a few seconds flight from base. Range must be assured at least 3,600 square miles of operational land area.
- Fuel and Maintenance Factors. The resulting fuel and maintenance saving due to the short flight to air-ground bombing range are major factors.
- Bombing Range Supersonic Flight Capability. The air-ground bombing range must be assured free of restrictions that might limit flights to less than supersonic speeds. Sonic booms permitted.
- Bombing Range Encroachments. The air-ground bombing range must be continually and legally assured of freedom from existing and future structural encroachments and protected from claims of damage due to flight operations and associated noises. Such protection must extend in all directions to a rational distance and altitude.
- Low-density Commercial Air Traffic. Nearest general aviation facilities should be more than 13 miles from base.

- Existing Facilities in Superior or Excellent Conditions. Base must be substantially free of need for facility upgrades and replacements. Evidence of continual careful refurbishments and installation of new improvements are major beneficial factors.
- Readiness Factors. The base and all its facilities must be more than adequate to match the foreseeable needs of air combat, support, reconnaissance, training and operation. It must be of sufficient size and capability to allow for prompt, efficient, and economical expansion and upgrade if unforeseen factors should arise.
- Environmental Factors. Installation must be free, to greatest extent reasonable possible, of known or suspected environmental problems. Recently developed environmental statements should show full approval by controlling bodies.
- Cost of Living Friendly: There must be highly-positive evidence that neighboring communities aggressively seek and actually secure maximum number of amenities to assure the best and most economical of living conditions for base families that live off-base, seek off-base elementary and advanced schooling, do off-base shopping, seek off-base recreational facilities. The communities must have a substantial pool of openings for employment of family members. And state-of-the-art medical services must be immediately available at costs well below national averages. .
- People Friendly. There must be long-standing and continuing facts in evidence that the base and its personnel are aggressively welcomed and supported in all elements. There must be no evidence of community adversity to the base and its people.
- What Installation Matches or Exceeds these and other essential requirements?

**Cannon Air Force Base provides tremendous military value because it is a modern, cost-effective base, with no encroachment and has unrestricted air space.**
